

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ANNUAL REPORT

OF THE

AUDITOR OF STATE,

TO THE

GENERAL ASSEMBLY OF OHIO:

FOR THE YEAR 1858.

2—Ex. Doc.—PART II.

REPORT OF THE AUDITOR OF STATE.

HON. SALMON P. CHASE, *Governor of Ohio*:

Having just closed and adjusted the accounts in this office, I herewith, in pursuance of the requirements of the constitution and laws of the State, make report of the finances for the year ending Nov. 15, 1858.

The revenue from ordinary sources during the year, amounts to \$2,996,701 51. To this is to be added the sum of \$704,657 54, the amount of the temporary loan authorized by an act of the Legislature, passed April 12, 1858; and the further sum of \$57,362 52, the amount of July interest not called for in the City of New York, and which, in pursuance of the 8th sec. of the act of April 12, 1858, "to define the powers and prescribe the duties of the Board of Commissioners of the Sinking Fund," was returned by the Commissioners to the State Treasury, making an aggregate of receipts from all sources of \$3,758,721 57. To this amount, however, there should be added the amount which should have been in the Treasury Nov. 15, 1857, \$726,939 66, as shown by the books of this department, which would swell the aggregate to \$4,485,661 23.

During the year warrants have been issued on the Treasury,—for General Revenue purposes, which include the general expenses of government, the support of the various Benevolent Institutions, the prosecution of the work upon the New State House, the expenses of the Penitentiary, &c., to the amount of \$788,268 88; for the repairs and general expenses of the Public Works, \$383,009 92; for State Common Schools and Libraries, \$1,189,499 26; and for balance of debt of 1856, interest on foreign, domestic and irreducible debts of the State and expenses of Fund Commissioners, \$1,154,680 71; showing a gross expenditure for all purposes during the year just closed, of \$3,515,458 77, and leaving a gross balance, as shown by the books in the Treasury, of \$970,202 46. To show, however, the amount of the actual assets in the hands of the present Treasurer of State, there must be deducted from this balance the sum of \$744,083 51,

the amount of the defalcation, which will show of available assets in the Treasury a nett balance of \$226,118 95.

It will be seen from the foregoing statement that the true balance which should be in the Treasury has been carried forward, as though no defalcation had ever occurred.

The following exhibit will show the above in detail:

Receipts and Disbursements for the year ending Nov. 15, 1858.

GENERAL SUMMARY.

RECEIPTS.

Taxes collected on duplicate 1857—

For General Revenue.....	\$572,004 88	
For Sinking Fund.....	724,665 55	
For Common Schools.....	1,213,097 14	
For District Libraries	39 72	
Total State tax collected.....		\$2,509,807 29
Canal tolls, fines and water rents	283,028 61	
Western Reserve and Maumee road tolls.....	2,272 68	
Proceeds of sale of derrick.....	65 00	
		285,366 29
Sales of section 16.....	65,455 30	
Sales of section 29.....	2,904 22	
Sales of Virginia military lands.....	2,715 09	
Sales of Western Reserve lands.....	588 22

Expenses of Public Works.....		383,009 92
Amount of defalcation.....		744,083 51
Total.....		\$4,259,542 28
Assets in treasury Nov. 15, 1858, to bal.....		226,118 95

REVENUE OF 1859.

Estimated receipts into the Treasury for the current year.

From duplicate of 1858, general revenue.....	\$560,000 00
" " " Sinking Fund.....	1,020,000 00
" " " Common School Fund....	1,200,000 00
" " " School Library Fund....	76,000 00
Total amount from collections on duplicate..	\$2,856,000 00
From canal tolls.....	\$300,000 00
From Western Reserve and Maumee road.....	3,000 00
From sale of school lands.....	60,000 00
From dividends on turnpikes, railroad stocks, &c....	30,000 00
From surplus revenue.....	15,000 00

From Ohio Penitentiary.....	\$70,000 00	
From auction duties and peddler's licenses.....	8,000 00	
Miscellaneous sources.....	10,000 00	496,000 00
		<hr/>
		\$3,352,000 00

ESTIMATED DISBURSEMENTS.

For State government, including Ohio Penitentiary, benevolent institutions and New State House....	\$500,000 00	
For interest on Foreign Debt and temporary loan..	846,000 00	
For interest on Domestic Debt.....	16,000 00	
For interest on Irreducible Debt.....	156,000 00	
For temporary loan due Jan. 1860.....	250,000 00	
For State common school fund.....	1,180,000 00	
For school library.....	76,000 00	
For expenses of canals.....	300,000 00	
For Miscellaneous purposes.....	10,000 00	3,334,000 00
		<hr/>
Estimated receipts over expenditures.....		\$18,000 00

It will be seen from the foregoing exhibit of Receipts and Disbursements that the revenues for the current year, from ordinary sources, fall short of those of 1857, in the sum of \$192,454 33. Of this amount \$50,000 may properly be accounted for by the difference in the aggregate State levy upon the tax duplicate as compared with that of the preceding year—the levy for 1856 being one-tenth of one mill more than that of 1857. In the items of revenue from turn-pike stocks and dividends and interest on railroad stocks and bonds, there is a decrease of some \$9,000 as compared with last year, the larger portion of which is chargeable to the falling off in the former class of property. There will also be found a decrease of \$52,000 in the amounts received from sales of sections 16 and 29 and other school lands, and on account of principal and interest of surplus revenue deposited with the counties. The decrease in these latter items is an inevitable result from the nature of the fund, which, in the course of a few years must necessarily be exhausted, and cease to yield a revenue.

The balance of the decrease may be found by comparing the receipts from the Penitentiary, from taxes on Banks and from the Public Works, with those of the preceding year, in each of which it will be perceived there has been a material falling off. The decrease in the receipts from

the Penitentiary amounts to about \$15,000—that from taxes on Banks is some \$29,000 more. The Branches of the State Bank and the Independent Banks have made their reports this year, as required by the 60th sec^t of the law of 1845, under which they were created; but, in consequence of the passage of a law by the last Legislature, by which they are required to “list their property as other property in the State” is listed, I could not recognize the validity of their returns, and have, therefore, declined to draw in favor of the Treasury for the amount set aside by them in lieu of taxes. The decrease in the revenue from the Public Works amounts to some \$35,000. The falling off in this item may, in some measure, be accounted for by the ravages of the unusually severe freshets of the past spring, damaging seriously the Hocking and southern portions of the Ohio Canals, and causing a suspension of navigation for some weeks upon these works.

In connection with this subject, I deem the present a proper point in this report to state that in consequence of the injury done to these works by the freshets alluded to, the Commissioner in charge of that portion of the canals found that the appropriations at his disposal would be greatly inadequate to repair the damages and keep his division in navigable order during the year. In this difficulty, and the emergency being pressing—not only to secure the works from further damage by instant prosecution of the necessary repairs, but to place and keep them in navigable order, recourse was had to the Governor to remedy, if possible, the deficiency in the requisite funds. But one remedy presented itself as admissible, which was, to advise the issue of over-drafts to an amount sufficient to repair the damages. This suggestion was fully concurred in by all the Executive officers of the State, and promptly carried into effect by the issue of over-drafts to the amount of \$15,000. The Legislature will, doubtless, promptly make the requisite appropriations to meet these over-drafts, made upon an emergency demanding prompt action to protect the interests of the State. While upon this topic, I would also suggest the propriety of the Legislature making a contingent appropriation, only to be paid upon the order of the Executive to meet exigencies of a like character.

The following exhibits will show in detail the condition of the several funds, during the year ending Nov. 15, 1858.

The act of the last session of the Legislature, which requires that every bank or banking company which has been, or may hereafter be incorporated under the laws of Ohio, and which has the right of issuing bills to circulate as money, shall report their property to the county auditor, to be listed on the duplicate and taxed as other property, I have thus far been unable to carry into execution. My failure to carry into effect its provisions arises from the fact, that the law in itself, is defective, in that it provides no mode, compulsory or otherwise, by which this class of property can be brought upon the duplicate, when the banks themselves fail or refuse to comply with its provisions. This defect in the law is not strange, when we take into consideration the varied legislation upon this subject, and how difficult and almost impossible it is to determine, with certainty, what laws or parts of laws bearing on this question, are now operative. It was, doubtless, supposed by the framers of the bank act of last winter, that the thirty-eighth section of the act of April, 1852, would give force to its requirements, in case compliance therewith was refused by the banks; but a careful examination of the section referred to, will, at once, show that its provisions cannot, under any rule of construction, be applicable to any other law than the act of which it formed a part. The defect in the act being irremediable by any known existing statute or part of law, and its provisions therefore, for the present at least, inoperative, I have presented the difficulty to the Attorney General for his official opinion. He inclines to the belief that a writ of peremptory mandamus issued by the Supreme Court of the State, to compel the performance of the specific duty enjoined by the law upon the banks, might possibly remedy the defect. The question is yet held under advisement; but as the efficacy of such a procedure is somewhat doubtful, even were the writ obtained, I would respectfully

refer the whole matter to the Legislature, for such action as they, in their discretion, may deem expedient.

The law under consideration, also repeals the act of the Legislature passed April 1, 1856, which, in effect, declares that money and every species of personal property to which value attaches, shall be taxed at its true value, without deduction; but defines *credits* to be the balance which may be due any person, company or corporation, over and above the amount which they may owe. The repeal of the act of 1856, leaves us just where the Supreme Court of Ohio, by their construction of law left us in 1853, and compels the listing for taxation of every species of personal property, the subject of value, *without* any deduction. Without some action on the part of the coming Legislature, the old issues upon this vexatious question must again be raised; for I shall feel constrained, otherwise, to instruct and enforce the assessment of the personal property of the State, in accordance with the construction placed upon the law by the Supreme Court, as above referred to.

The act "for the semi-annual collection of taxes," which passed at the close of the last session of the Legislature, owing, perhaps, to the haste with which the business before that body was forced through during its last days, was found, when about to be carried into effect, to be imperfect. In my efforts to carry out the wishes of the representatives of the people, as expressed in the law, it was found necessary, in some instances, to depart from the strict letter of the statute, in order to make its provisions harmonize with other laws bearing upon the collection and disbursement of the revenues. The settlement contemplated by the 5th and 6th sections of the act, will have to be guarded with all the formalities of a general or final settlement, for the reason that the funds collected can only be paid after ascertaining where and to what authorities they properly belong. For instance, the auditor may ascertain from the informal settlement contemplated by the law, that the treasurer has collected an estimated amount of township, school, and school house tax; but without a formal and exact settlement with that officer, he cannot, with any propriety or safety, grant an order for any portion of the amount collected, until he knows the exact amount of each class of the gross fund which belongs to each of the several townships and school districts among which it is to be distributed. This can only be done by a full and complete settlement up to the time. The duplicate, by the terms of the law, is made out and delivered to the

treasurer on the first of October, from which time the treasurer's office is to be kept open for the receipt of taxes, until the final settlement in August following. The half taxes become due on the 20th of December in each year; after which *all* of the personal tax, half of which was not paid on or before that day, becomes due, and the treasurer must proceed to its collection, by distraining property for its payment, as well as for the payment of the half tax due on any realty, and unpaid on the 20th of December, to all of which he may add 5 per cent. as a penalty for his own use. The half of any tax on realty, unpaid on the 20th of December and not paid by distraint of property before the first Monday of February, shall *then* be charged with a penalty of 30 per cent. and interest. From any thing in the law, the auditor can have no knowledge of the amount of this penalty and interest, and consequently must rely, in the August settlement, upon the treasurer's statement and figures for the amount with which he is to be charged.

If the Legislature, however, will so modify the law as to make the settlement of each half yearly tax a full and complete one, by requiring the treasurer, on the first Monday of February, to report to the auditor a correct list of all persons who have paid the full amount of tax for the entire year, and a delinquent list showing who have failed to pay the half tax charged against them, the auditor will have, at once, under his control the evidence from which he can correctly ascertain the full amount collected up to the date of the settlement, and the precise amount collected for each of the purposes for which the tax was levied, as well as to compute and ascertain the additional amount with which to charge the treasurer for penalty and interest on the December delinquent realty tax.

If the law under notice is to be adhered to as part of the financial system of the State, much additional and amendatory legislation will be required to make it harmonize with other laws upon kindred subjects still on our statute books.

Under the provisions and requirements of the 7th section of the "act to establish the Independent Treasury of the State of Ohio," passed April 12, 1858, the Comptroller of the Treasury and myself made a settlement with the Treasurer of State, and ascertained the exact condition of the treasury, by actual count of the funds then therein, and of the vouchers and evidences of money held by the Treasurer—a full report of which settlement was, by them, made to you at the time.

In pursuance of the provisions of the act "to further provide for the better regulation of the receipt, disbursement, and safe-keeping of the public revenue," passed April 12, 1858, conjointly with the Treasurer of State I have ascertained, by actual inspection and count, on the first business day of each month, the exact amount of money in the State Treasury at the close of the preceding day, and caused a publication of the results of each of such examinations to be made as required by the 13th section of the act.

I have, also, in conformity with the requirements of the 16th section of the same act, with the concurrence of the Comptroller of the Treasury, appointed James T. Claypool, Esq., to make a thorough examination of the business, receipts, books, and vouchers of each collector of canal tolls, and receiver and register of land office, &c. He is now, and has been for some days, closely engaged in the discharge of the duties assigned him. When he shall have completed his labors, a detailed report of his proceedings will be made.

While upon the subject of this act, I would call particular attention to its 7th, 8th and 9th sections, as regards that class of banks which has heretofore been under the entire control of this department. A careful examination of these sections shows their language to be ambiguous, and susceptible of different constructions—not so much as to the duties enjoined, as to the particular officer by whom they are to be performed. What is needed is, that these duties should be more specifically set forth, and assigned more distinctly to the officer by whom they are especially to be discharged. I would recommend, also, as a further security against over-issues, &c., that all blank notes of circulation should be certified into the treasury, only to be withdrawn upon proper receipts and vouchers of the bank to whose account they may be placed.

I herewith submit the report of the comptroller of the treasury, made to me in accordance with the requirements of the 7th section of the act under notice, as follows:

H. BALDWIN, Registrar.

To Hon. W. B. THRALL, Comptroller of the Treasury.

I feel it an imperative duty to call the early attention of the Legislature to the provisions of the "act for the relief of Mrs. Martha McLaughlin," passed April 12, 1858. Shortly after the adjournment of the Legislature, I was called upon to give my warrant upon the Treasurer for the amount named in the act, pursuant to its provisions. From a careful examination of the bill, I was constrained to decline compliance, from the facts that the bill designated the particular fund from which the appropriation was to be paid, and that no money originating from the source indicated had been realized to the State, nor had the contingency occurred under which alone I was authorized to draw upon any other fund in the Treasury otherwise unappropriated. It was urged in support of my duty to draw the warrant, that the Legislature *intended* that the money should be paid out of *any* funds in the Treasury. That such was the intent and expectation of many who voted for the bill, I have no doubt; but the language of the act was such that I did not feel justified in giving it that interpretation, although strongly inclined and wishing to do so, as delay, I felt, considering the great age, infirmity, and necessities of the beneficiary, might defeat the humane intention of the Legislature. The matter is respectfully referred to their prompt and careful consideration.

Within the last year I have been called upon to audit bills for the sustenance of United States prisoners, under the provisions of an act of the Legislature, passed December 20, 1806, entitled "an act for the confinement of prisoners of the United States in the jails of this State." My object in calling attention to it at this time is, that the Legislature, about to resume its sessions, may repeal it, or give it force and vitality, by making an appropriation to ensure its being executed in its letter and its spirit, as without such it is inoperative.

On the 26th November last, there was certified into the State Treasury by P. V. Herzing, the sum of \$731, on account of sales of Mercer County Reservoir Lands. This payment led to inquiry and examination in regard to these lands, and the following facts are the results:

In pursuance of the act of April 25, 1854, (O. L. vol. 52, p. 56), there was sold by authority of the Board of Public Works, on November 9, 1854, lands lying around the Mercer County Reservoir, amounting to 1,952 68-100 acres, for the sum of \$8,085 76. Of these lands, the purchasers have paid, for 1,079 36-100 acres, the sum of \$3,602 76, being the

price for which they were sold, less \$40 remitted by the Commissioner on sales to L. M. Eckert. The money has been paid into the State Treasury, and deeds issued to the holders of the certificates of purchase.

As to the remainder of the lands, being 873 32-100 acres, sold at that date, (or which purport to have been sold, as shown by a report in this office), I am not able to ascertain that any payments whatever have been made thereon—certainly not into the Treasury in the ordinary mode. Whether these lands were sold at the appraised value or not, has not been ascertained, there being no return or record of appraisement, either in this office or in the office of the Board of Public Works.

A further sale of these lands was made by the Board, June 14, 1855, comprising 532 20-100 acres, appraised at \$1,898, and sold for \$1,999. Of these lands, certificates of payment in full have been issued by James B. Steedman, Acting Commissioner, for 287 76-100 acres, for which \$731 was paid, being the amount at which the land was appraised, but \$75 less than the sum for which it was sold. Deeds have been issued to the holders of these certificates of payment, except for three tracts containing an aggregate of 43 12-100 acres, the certificates for which have not been presented. The money (\$731) was certified into the State Treasury, as before stated, by Mr. Herzing, on the 26th November, 1858. The remaining lands sold at that date being 244 44-100 acres, appraised at \$1,167, are, so far as can be ascertained, unpaid for at this date.

There are, therefore, around the Mercer County Reservoir, 1,117 76-100 acres of land, which were sold November 9, 1854, and June 14, 1855, for \$5,636 46, which are as yet unpaid for. There may be, and probably are, other tracts in this locality, the property of the State, which have not been reported to this office.

Section 7 of the act of April 16, 1857, (O. L. vol. 54, p. 160), provides that "any lands now belonging to the State of Ohio, lying near the Mercer County Reservoir, which may remain unsold, shall be subject to private entry at the office of the agent for the sale of the Canal lands of the State, now located at Defiance, upon the same terms, and under the same restrictions, as are provided in an act entitled 'an act to abolish the office of Commissioner of the State Land Office at Defiance, and to provide for the sale of lands to actual settlers at said office, and to create the office of Land Agent,' passed May 1, 1854." Under the act of May 1, 1854, all lands appraised at more than \$2.00 per acre, were reduced to the sum of

\$2.00 per acre, and a further reduction of 75 per cent. was authorized to be made to actual settlers. The lists hereto attached (marked "1 A.," "2 A.") will show that some of these lands were sold at from \$5 to \$10 per acre, and were probably appraised at nearly that price. Under the laws referred to, (presuming that they have not been paid for), they are subject to entry at this office by actual settlers at 50 cents per acre. This, I suppose, was not the object, but is the legitimate effect of the law; and they will be sold (so far as they have been appraised) if there is no further action by the Legislature, and if upon examination it is found that they have not been sold, or if sold, have been forfeited to the State.

NOTE.—The above land was sold for \$1,193 00.

In compliance with the act of April 12, 1858, abolishing the office of land agent at Defiance, L. Porter, Esq., late agent at that place, has forwarded to this department the books and papers pertaining to the agency. Under date of January 4, 1858, he writes to this department as follows: "All the lands reported for sale at this office, have been disposed of within the past year, with the exception of the south part of the north half of Sec. 31, Tp. 3, N. R.. 2, E., containing 215 acres, which lies in the reservoir, and is entirely under water."

On the 20th of March, 1849, Woolsey Welles, Esq., by a Joint Resolution of the Legislature, was appointed agent for the sale of Western Reserve School Lands. From the lists and appraisements which, in pursuance of law, were placed in his possession, it appears that there were 37,724 16-100 acres of land, appraised at \$98,382 71 3-4. On the 30th of October last, Mr. Welles handed in his resignation to the Governor, and placed all the books and papers pertaining to the agency in charge of this office, and, at the same time, rendered his final account. From this it appears that his entire receipts were \$104,163 48, for which he has credit as follows:

For paid office rent, advertising, stationery, &c.....	\$450 80
" commissions, at 6 per cent.....	6,248 36
" amount paid into the State Treasury.....	97,464 32
	<hr/>
	\$104,163 48

Mr. Welles reports the lands all sold, and all paid for, except the north half of Sec. 23, T. 5, N. R. 5 E., in Defiance county, which was sold November 15, 1853; the purchasers made only the first payment, \$250—being one-fourth of the purchase money. The deferred payments are all due, and amount to \$750, with annual interest from the day of sale. By the terms of the law authorizing the sale, the land reverts to the State, and may be sold for any sum that will yield the State the amount of purchase money still due and interest accrued since the purchase. Under this state of facts, I would suggest that the Legislature pass a law authorizing the Auditor of Defiance county to advertise and sell said tract on a credit of one, two and three years. In this way, from what is learned of the value of the land in question, the amount heretofore paid by the purchaser, may be saved to him, and the State itself suffer no detriment.

The number of Foreign Insurance companies which have complied with the law, and obtained authority to transact business in the State, for the year 1858, reaches sixty-one—being more than in any previous year. The names and locations of these companies, together with a condensed abstract of their condition, as exhibited by their sworn statements, will be found appended to this report. I would again call the attention of the Legislature to the fact, that the act of April, 1856, regulating these companies, is silent as to the power of the Auditor of State to *revoke* a "certificate of authority" once granted; and that there are doubts whether he can legitimately do so, without express warrant by law. Cases may arise—and the case did occur this year—that a company, properly, or improperly, holding a "certificate of authority" from this department, might, before the expiration of the certificate, fail, or in some other manner become unworthy the confidence and patronage of our citizens. Or, it might become apparent to the Auditor of State that the certificate had been issued on deceptive and wrong representations in the statement and proofs of a company. I would, therefore, respectfully suggest that the law regulating these companies be so amended as to empower the Auditor of State to *revoke* a "certificate of authority," when he is satisfied that it was obtained under false representations—or that the company is not worthy of the patronage of the people of the State.

I would also renew the suggestion made in my last annual report, in regard to so amending the 9th section of the Foreign Insurance law, as that persons, doing business in this State for Foreign Insurance Companies which have not obtained authority therefor, may be more certainly reached

and punished. The silence itself of the law, as to *who* shall prosecute in such cases, encourages and holds out inducements to these persons to violate it. It is, surely, but simple right and justice that honorable and responsible Insurance Companies, both Foreign and Domestic, should be protected against this unfair competition.

No reports have, as yet, been made to this office by Domestic Mutual Insurance Companies, as required by the 18th section of the Act of April 14, 1857, to "authorize the incorporation of Mutual Insurance Companies."

I feel it my duty respectfully to call the attention of the Legislature to the consideration of a claim, presented by Col. Samuel Medary, early in the spring of 1856, and held in abeyance since that date from several causes. The claim is for State printing for 1851-52, and was originally presented for allowance and payment at this Department in the fall or winter of 1852-53. The then Auditor of State refused to allow the claim, and consequently its payment, for reasons that may be found in the legislative documents of that date.

Upon a careful examination of the claim and contract under which it was made, I was fully convinced that Col. Medary was legally and equitably entitled to receive compensation for the State printing for that year in accordance with the contract made for that purpose; but I declined to audit and allow the claim, for the reason that it had been acted upon by my immediate predecessor in office, who, with the same facts before him, had come to different conclusions—and also, because I conceived it to be unsound policy and unsafe as a precedent for an officer thus summarily to revise and reverse the action already had by his predecessor in the same office. When this result was communicated to Col. Medary, he requested me to call the attention of the Legislature to it in my annual report, but from some cause, the subject was entirely lost sight of until my report of last year was in the press. I would now respectfully direct the attention of the General Assembly to this matter, and suggest that a competent Committee be appointed to investigate and decide upon the legal and equitable rights of the claimant.

By reference to the receipts and expenses of the Public Works of the State for the present year, it will be seen that the expenses exceed the revenue in the sum of \$65,738 80. To show, at a glance, that this diminution in the receipts is no new thing, but has been in progress for a series of years—and will in all probability continue, I present here Tabular Statement "II," to which I would specially invite legislative consideration.

EXHIBIT "H."

Tabular Statement, showing in detail the Revenues derived from the Ohio Canals, with the amount expended for Repairs, Salaries, &c., and the balance of Canal Fund applicable to the payment of interest, &c., for the years 1847 to 1858, inclusive.

YEARS.	Amount received for Fines, Water Rents, and Tolls, exclusive of Tolls Refunded.	Salaries of Collectors, Inspectors, and Incidental Expenses.	Nett amount paid into State Treasury.	Amount of Checks drawn for Repairs by Acting Commissioners of Public Works.	Paid Salaries of Acting Commissioners.	Balance of Canal Fund applicable to payment of interest, &c.	Amount of Checks drawn for over and above nett earnings.

The foregoing table exhibits a bird's-eye view of the receipts and expenditures on account of the Public Works for the last twelve years—a close examination of which will show, that since 1851 there has been a steady and rapid decrease in the revenue therefrom, and for the past three years, that they have become a charge upon the Treasury in an aggregate of \$167,030 35. But little probability exists that they will ever, under the most favorable circumstances and management, do more than possibly meet expenses, unless the State will venture upon incurring the further expense of widening and deepening them, and so improving the navigation, as to permit the introduction of steam as a motive power in the transportation of merchandise. The experiment has been tried upon the Canals of a sister State, and results have been obtained sufficiently successful to demonstrate the superior cheapness of the new motive power; but whether the diminished cost of transportation consequent upon the introduction of steam canal boats, and the increased capacity for freights, will counterbalance the advantage in point of time possessed by railroads, in transporting the trade of the country, is a question of doubt and yet unsettled. To follow the lead of New York in this improvement of the system of internal navigation, would, however, involve the expenditure of several millions of money, and in a matter of such problematical expediency, it is not likely, even if the plan of enlargement should be thought practicable by those qualified to form a correct judgment upon it, that it will be adopted.

The steady and regular falling off in the receipts from the Canals of the State has, from year to year, been accounted for by temporary and natural causes, and a brighter future for them has been confidently predicted. The true cause, and one not easily remediable, lies, in my opinion, in the superior facilities, in point of time, offered by railroads for the carriage of the commerce of the country—facilities more than compensatory for the additional cost of freight, and which must, in the nature of things, continue to exercise a ruinous and disastrous influence upon Canals and Canal transportation. But, be the cause what it may, the fact is glaringly apparent, that the Canals are steadily, year by year, becoming worthless, and worse than worthless, as a source of revenue to the State. Each year of my official service has but confirmed the results of my observations upon this subject, and I therefore respectfully renew the views and recommendations in regard to Canals embodied in my report of the last year.

Yours respectfully,

F. M. WRIGHT, *Auditor of State.*

IRREDUCIBLE STATE DEBT, CONSTITUTED OF SCHOOL AND TRUST FUNDS.

MESSAGE

OF THE

GOVERNOR OF OHIO

TO THE

FIFTY-THIRD GENERAL ASSEMBLY,

AT THE

ADJOURNED SESSION¹ COMMENCING JANUARY 3, 1859.

7—EX. DEC.—PART II.

G OVERNOR'S MESSAGE.

Fellow Citizens of the Senate and of the House of Representatives :

At the commencement of your regular session a year ago, I transmitted to you in obedience to the Constitution, a full exposition of the general condition of the State, together with such recommendations in respect to legislation, as the public good seemed to me to require.

In that communication I endeavored to set in a clear light the industrial progress, the material resources and the financial strength of our great commonwealth. It seems not inappropriate, now, before proceeding to more special statements and particular suggestions, to submit to you some general views of our social condition, as affected by other elements than those to which I then invited your attention.

Seventy-one years ago what is now Ohio, was unbroken wilderness. Seventy years ago the work of American civilization within her limits was just begun by the settlements at Marietta and Cincinnati. Fifty-four years ago she became a State of the American Union. Her subsequent social progress has been a sublime triumph. To-day a powerful commonwealth, numbering nearly two millions and a half of people, exists upon her soil, with unsurpassed energies, resources, agencies of development, and means of happiness. From the eminence already reached we survey, with confident reliance upon the favor of Divine Providence and the inspiration of Free Institutions, the loftier heights yet to be attained.

Prominent among the elements which determine social condition, is the numerical advance or decline of population. The rate and character of this movement, in the absence of a census, must be gathered from the number of marriages; of births; of deaths; of immigrants; of emigrants, and of new habitations. For ascertaining the number of these with reasonable certainty, sufficient means are supplied by State and Federal legislation. According to the estimates of the Commissioner of Statistics,

the Marriages in Ohio during 1855 were 24,000; the Deaths 45,000; the Births 80,000; the Naturalizations 5,000; the new structures 10,000. The increase by births, according to this estimate, is 35,000 annually, and the yearly immigration from foreign countries and other States is estimated to exceed the yearly emigration by 20,000; giving an aggregate increase of 55,000 annually, or 440,000 in eight years. The new structures, allowing six persons for each, indicate nearly the same rate of progress. The population of Ohio in 1850 was 1,980,329, and is now, if the estimate just referred to be correct, 2,420,329.

The foremost concern of an intelligent and prosperous people is Public Instruction. The mind of every community is the motive power of its advancement; and the measure of its education is practically the measure of production and of all substantial progress. In Ohio the Constitution wisely requires the General Assembly to secure a thorough and efficient system of Common Schools throughout the State. The honor of the first act, in fulfilment of the duty thus enjoined, belongs to the Legislature of 1852-3. That Legislature re-organized common school education in Ohio. It does not at all detract from the honor justly due to it, to say that much had been done by previous legislation and by the intelligent and zealous labors of the first State Superintendent and the State Teachers' Association, to prepare the way for the comprehensive and beneficent measure then adopted, under which the Common Schools of Ohio have attained their present state of excellence and usefulness.

A brief comparison between the condition of our Common Schools the year before this enactment and at the present time, will illustrate, in some degree, its happy effects.

The number of Common Schools in 1853 was 5,984; in 1858, 12,500: the number of youths over five years of age and under twenty-one enumerated in 1853 was 806,782; in 1858, 843,840: the youth enrolled as attending school in 1853 were 358,417; in 1858, 609,343: the average number in daily attendance in 1853 was 271,196; in 1858, 355,863: the number of teachers employed in 1853 was 13,564; in 1858, 19,873: the amount paid teachers in 1853 was \$800,145.00; in 1858, \$1,975,832: the number of school houses in 1853 was 6,850; in 1858, 10,497: the value of school houses in 1853 was estimated at \$2,000,000; in 1858, at \$3,846,420.

These figures exhibit a gratifying progress; but they by no means furnish a complete view of our educational condition.

There has been a constant and rapid progress which figures cannot measure. The character and condition of our school houses and school rooms have been greatly bettered; the standard of qualification for teachers advanced; the methods of teaching improved; the range and scope of instruction enlarged; and the results, in acquisition and capacity, largely augmented.

A great educational work is prosecuted, also, outside of the Common Schools. The Colleges and Female Seminaries in the State, send forth yearly numerous young men and women to take up and carry forward, in its various departments, the work of moral, social and political improvement. During the past year I attended the Commencements of as many of the Colleges as was practicable, and was gratified to observe the marked ability and proficiency displayed by the graduates.

It is to be regretted that the requirements for admission and the course of instruction vary so greatly in these Colleges and Seminaries; and I would suggest the expediency of establishing by law some classification of these institutions, and some educational standards to which Universities, Colleges and Seminaries shall be required respectively to conform, in the admission, instruction and graduation of students, as conditions of incorporation.

Besides these Colleges and Seminaries, there are many Schools, corresponding in general character with our Common Schools, but sustained by denominational or private resources, in which a large number of youths receive instruction.

I regret that I have no means of ascertaining the number of these various educational institutions; the number of their teachers, students or pupils; or their schemes of instruction; or their results; and I respectfully suggest the expediency of such legislation as will secure the collection of this information, so essential to a full understanding of the condition of our population in this important respect.

It will not escape your observation that, while the actual progress and condition of our Common Schools may well gratify and encourage the friends of popular education, there yet remains a work to be accomplished which imposes grave responsibilities and must needs excite earnest solicitude. The whole number of youth of the school age, as has been already stated, is 843,540, while the number enrolled is 609,343, making the number not enrolled 234,497. The disparity between the whole number and the number, 355,863, in daily attendance, is more striking. The difference is 485,977. Making every allowance for the number taught in private or

denominational schools, there must still remain a considerable number who attend no school at all, while of those who do not absent themselves altogether, a very large proportion attend so irregularly or for such brief periods that they derive little benefit from it.

Next to this absenteeism, the most serious hindrance to the prosperity of the Common Schools is the want of a sufficient number of well qualified teachers. Not a few indeed of our teachers possess eminent qualifications for their responsible office. To such we owe not only many excellent district schools, but also the High Schools which adorn many of our cities and towns, and afford opportunities for education which would have been sought in vain a few years ago in most of our Academies and Colleges. A very large number, however, are extremely deficient both in knowledge and in that ability to teach which mere knowledge can never give.

The correction of these evils, so far as may be practicable, is your duty, and will be, I trust, your pleasure and your honorable distinction.

The best means, in my judgment, of securing an adequate number of good teachers, are the establishment of Normal Schools and the encouragement of Teachers' Institutes. I ventured to suggest last year the organization of a Normal Department in one or both our State Universities. More immediate and perhaps more valuable results would probably be obtained from the establishment of three or four Normal Schools in different districts of the State, giving the preference within each district to the city or town which would provide the best buildings for the purpose without cost to the State. Provision has already been made by law for the encouragement of Teachers' Institutes, but it is uncertain and inadequate. I recommend the direct appropriation of an adequate sum, to be paid, on compliance with proper conditions, upon the certificate of the State Commissioner.

The indispensable necessity of securing general, regular and continued attendance in school is universally acknowledged. Without this the great object of the common schools, namely, a good education for every child in the State, fails of accomplishment. The Federal Census of 1850 exhibited the fact that over thirty-five thousand persons in Ohio, twenty years old and upwards, were unable to read or write. This number was about one in seventeen of all the people of the same age. If we reflect that besides these totally illiterate persons, there is a large number whose education hardly raises them to a higher level, we shall attain some just conception

of the importance of adequate provision for universal attendance. We must not be satisfied while one person capable of instruction remains untaught or ill taught. No means seem better adapted to secure attendance, awaken interest and quicken effort in the attainment of knowledge than frequent visits, addresses and conversations by properly qualified officers of the State. The law recognizes the value of this agency in requiring the State Commissioner to devote a portion of his time to such labors. But it is obvious that the thorough discharge of the other duties imposed on him is quite incompatible with efficient labors of this kind. I suggest, therefore, that he be authorized to employ one or more competent agents to visit every township and urge upon parents, teachers and children, the duties essential to the highest efficiency of our schools. This plan has been adopted elsewhere with the happiest effects. If adopted here, we need not fear the disclosures of any future census, or doubt that our system of Common Schools, already regarded as a model for imitation by other States, will vindicate, by perfect success, its claims to admiration and honor.

While we may reasonably hope that the illiterate, as a class, will soon disappear from our society, no such pleasing expectation can be indulged in respect to that large portion of the community whom defect and disease in mental or physical organization render proper objects of public care; and whose number and relation to society constitute another element of our social condition, which must engage your notice.

The benevolence of the State has already provided three Asylums for the Insane, which have cost for grounds and construction about \$474,000, and are sustained at an annual expense of \$90,000, excluding charges properly belonging to the account of construction and interest. The cost of the Northern and Central Asylums has been about \$153,000 each; that of the Southern about \$168,000. The actual value of the Central Asylum is now probably more than double that of either of the others.

In these Asylums there were at the beginning of the last year, 568 inmates, and there were received during the year 414, making the whole number of participants in their benefits 982; there were discharged, 412; there died 43, and there remained at the commencement of the current year, 570. Of those discharged 240 had been restored to sanity, and 35 decidedly improved. The average expense of each inmate was about \$158.

The Central Asylum will accommodate 250 inmates, the Northern 150, and the Southern 160. Each has been filled to the extent of its capacity.

Another Asylum is in progress of construction in Hamilton County, for the reception of the insane of that County only. After its completion and opening, that County will constitute the South-western Asylum District.

The number of Insane in Ohio according to the census of 1850 was 1,303. This number was doubtless understated. I am satisfied that the present number is not less than two thousand. The Superintendent of the Central Asylum thinks it does not fall short of three thousand. The arguments which establish the duty of some provision for some of the Insane, require, doubtless, adequate provision for all. Several plans for such provision have been suggested. One contemplates the enlargement of one or more of the existing Asylums; another proposes to provide for the support and treatment of the Insane in the County Infirmaries; while a third, not necessarily excluding the others, suggests the enactment of a law for the establishment and regulation of private Asylums, in which a large portion of the Insane would be provided for by their friends without charge to the State. I have no hesitation in recommending the legislation contemplated by this latter suggestion. The information necessary to a well grounded choice between the other plans is not yet accessible. My impression is that the first will prove most economical and most beneficent; if indeed, after the completion of the South-western Asylum and the enactment of a judicious law for Private Asylums, either shall be found necessary.

The condition of the Idiotic, equally with that of the Insane, must engage the attention of the philanthropist and statesman. A few years ago this hapless class seemed beyond reach of effectual relief. Recently, however, attempts to rescue them from their apparently hopeless condition have been crowned by results which inspire hope and encourage perseverance. The judicious humanity of the last General Assembly inaugurated a systematic plan for their instruction and improvement, which has been so far executed under your auspices, that ultimate success is no longer doubtful. It is not, indeed, to be expected that the Idiotic can be elevated to any high degree of capacity; but very many of them can be qualified to earn their own subsistence, and nearly all can be trained to habits of neatness and propriety. The whole number of idiots in the State is reasonably estimated at about 2,000. Of these, 500 are of a proper age to receive instruction. In the Asylum, recently opened for their reception, there were, at the commencement of the present year, 16; there were received during the year 22; there were discharged 6; there are absent 6.

the number under instruction at the commencement of the present year, was 26; the average number maintained at the State's expense 20. The expense of the year, excluding the cost of permanent improvements, has been \$3,845 67. The average annual expense of each pupil, was \$192 50. When the Institution is full, the average expense of each pupil will of course be less, and will not exceed the average cost of each inmate of the other Asylums. The question of the permanent establishment and location of the Institution should be promptly decided. If decided affirmatively, provision should be made for the purchase, either of the property in which it is temporarily established, or of some other site. After careful consideration of all circumstances, I think it my duty to recommend the first of these alternatives as most judicious and most economical.

Deaf mutes constitute another class for whose education public provision must necessarily be made. To our State belongs the honor of first recognizing this principle; and nearly thirty years have now elapsed since her Asylum was first opened to these unfortunates. The number now in the State is estimated at 1,200. Of these, more than one-third have received instruction in the Asylum, and probably another third are of suitable age for admission. Of this latter number 150 are in actual enjoyment of its benefits, while 250 are necessarily excluded. The number admitted during the year was 35, and the same number was discharged. The expenses of the Institution paid by the State during the last year were \$21,177 94. The average cost of each inmate was \$141. The importance of adding to the instruction in this Asylum, proper training for some industrial occupation, as well as the necessity of some further provision for those whom its limited capacities exclude from admission, will doubtless engage your serious consideration.

Another class whose situation enlists the warmest sympathies of every feeling heart, and invokes irresistibly the provident benevolence of the State, is the Blind. The total number of this class is estimated to be 840. Of this number about 200 are of proper and legal age for admission to the Asylum. Of these about 60 have either already received its benefits, or are thought by their friends too young to be sent to it; leaving 140 who should be under instruction. There were in the Asylum last year 100. There were admitted or re-admitted during the year 28; the whole number under its instruction up to its close was 105. The average number in daily attendance was 94. The expenses, excluding \$5,500 for permanent

improvements, were \$13,387 95, showing an average outlay for each inmate of near \$142.

It thus appears that the whole number of persons rendered infirm and dependent by defective or diseased organization is 6,040; that of these 3,040 are in conditions requiring provision for them in public or private institutions; that 847 are actually in the State Asylums, leaving 2,193 unprovided for, except so far as they may find relief in County Infirmaries, or private families; that the average number constantly in the Asylums through the last year was 834; that the total cost to the State of their maintenance during the year was \$128,410; that the cost of each inmate for the year was \$154; that to provide for those needing, but not now receiving, the benefits of the Asylums, at the same rate, would require an annual additional expenditure of \$337,722, making an aggregate annual outlay of 466,132; and that these estimates are exclusive of interest, about \$36,000 on the capital, about \$600,000, invested in the existing Asylums, and of the yearly cost of permanent improvements, which was last year about \$13,000; and of the capital yet to be invested in new sites and structures, and of the interest upon that.

No one desires more earnestly than I that the General Assembly may fully discharge the obligations, assumed in the Constitution by the whole people, to the children of sorrow. The duty of fulfilling them is clear, and the benefits of its performance evident. The social condition of no people can be what it should be, while a class of guiltless and helpless victims of physical or mental disorder remains unrelieved. Nor is the duty of relief less imperatively dictated by considerations of economy, than by considerations of philanthropy. The dependent infirm must be sustained by society in some form. The only choice is between modes. And how much better that mode which raises so many of them from depths of helplessness and wretchedness, and makes them self-supporting and even useful members of the community, than that other mode which wastes resources in fitful and inadequate relief, drops its wretched objects in their sorest need, and inflicts upon society the moral and social evils necessarily resulting from the presence of such a class neglected in its midst.

The statements I have submitted are designed to set clearly before you the nature and magnitude of the evil, for which you are called upon to provide a remedy. They will, perhaps, convince you of the necessity of restoring the policy adopted at the opening, and pursued for twelve years

in the administration of the Asylums, of requiring that the cost of maintenance in them be defrayed by the parents or guardians of the inmates, in cases where the circumstances of the parties fully justify it. They will, I think, also satisfy you of the expediency of encouragement, by law, to the establishment of private Infirmaries and Asylums, in which there is reason to believe many will be maintained by their own means, or by relatives and friends; and that others, needing help from the State, can, in many cases, be provided for at much less than the present cost. They will also, it may be hoped, recommend to all entrusted with the administration of these Institutions, the duties of economy in expenditure and vigilance in oversight.

Many individuals of the classes partially provided for in the State Asylums, are inmates of the County Infirmaries. This fact imparts additional force to the general considerations which suggest further legislation for the regulation of these Institutions. I regret that the Commissioner appointed under the act of your predecessors to examine the reports required by it, and prepare a bill for the better endowment, regulation and management of Infirmaries, has as yet been unable to fulfil the duty imposed by his appointment. I trust, however, that the preparation of a proper bill and the necessary legislative action upon it will not be long delayed.

Another important element, entering into every adequate estimate of social condition, is that of Pauperism. In Ohio the pauper class is less numerous than in many other States; but is yet large enough to require thoughtful consideration. The number of poor, well or ill provided for, either temporarily or permanently, in Infirmaries, Houses of Refuge, or other Institutions, is estimated at 2,800; and the number of the same class receiving out-door relief, at 12,000, making the total number of poor supported wholly or partially by the public during the year, 14,800. Estimating the population of the State to be 2,400,000, the proportion of paupers is one in 162. The proportion of the same class in England is one in 12; in New York, according to the census of 1850, it was one in 50; in Massachusetts, one in 65. For the prevention of its increase in Ohio, we must rely on the aid of Education, upon the influence of Religion, and upon equal laws, securing to labor its just share of production. There is no reason to expect, however, that the poor will ever cease out of the land. Hereafter, as heretofore, it will be the duty of States and individuals to open wide the hand to the

needy. Let us hope that our own State, so honorably distinguished for her Institutions of Benevolence, will never fail in the just performance of it.

To ascertain the entire number of the dependent classes, it will be proper to add to the number of the Insane and otherwise naturally infirm, 6,040 and to the number of paupers, 14,800, the average number daily in confinement under charge or sentence for crime, estimated at 11,400; making the whole number of persons to be maintained wholly, or in part from public revenues or by private aid, 32,240.

This aggregate includes all the Insane, the Idiotic, the Deaf and Dumb the Blind, the in-door and out-door paupers, and the imprisoned. The whole mass may become at any time what much the larger portion is at all times, a charge upon the State. It is what may be justly called the infirm element of society. Its proportion to the whole constitutes an important indication of the moral and industrial condition of a State. That proportion in Ohio is as one to 75; in Massachusetts as one to 41; in New York as one to 20.

Under the general name of Crime, as an element of social condition, may be comprehended all action, associated or individual, which, violating moral obligation, inflicts injury on persons or society. What I have to submit to you relating to crime in our own State, will, however, be confined to the proportion of offenses against positive laws to the total population, and to their retarding and disturbing influences on the otherwise healthful and regular progress of society. The number of indictments for crime during the past year was about 3,600; the number of police arrests for crimes against the State not prosecuted by indictment, was about 3,200; the number of arrests for offenses against police ordinances 4,686; making the number of arrests for crimes and offenses of lower grade 11,486. The convictions carried into judgment, upon indictment, were 1,300. The murders during the year were 80, and the suicides 65. The proportion of crimes and offenses to the population was one in 208, the proportion of offenders being of course somewhat less. The proportion of murders was one to 30,000; that of suicides one to 36,923.

The infrequency of convictions as compared with indictments will doubtless attract your attention. It indicates a defective administration of criminal justice, to be remedied not so much by legislation, as by increased vigilance and firmness on the part of those to whom that administration

is committed. It is worthy your consideration, however, whether, upon convictions for murder in the first degree, it may not be expedient to authorize the courts to sentence at discretion to capital punishment, or to imprisonment for life. I am persuaded that, in many instances, murder escapes all punishment, or all adequate punishment, through the reluctance of juries to find verdicts which must necessarily be followed by sentence of death.

It is well ascertained that, of crimes of violence, nearly one-half have their immediate origin in intemperance, and that more than four-fifths of the police offenses are due to the same baleful cause. It is the abundant source of Pauperism, Lunacy and Disease, as well as of Crime. Its cost to society is beyond the power of computation, and its multiform influences for evil beyond the reach of estimate. I again invoke your attention to this vitally important subject, and trust that your action in regard to it may be wise and efficient.

In this connection I think it my duty to recommend to you the establishment of an Asylum for Inebriates. Much evil to individuals and society may be averted, and much positive good accomplished, by means of such an Institution. If established on the State Reform Farm, upon a judicious plan and scale, its cost need not be great.

The administration of civil, not less than that of criminal justice, is intimately related to social condition and advancement. When cheap, prompt, unbiased and sure, it guaranties industry, promotes enterprise, and insures progress. When dear, dilatory, impartial and uncertain, it impoverishes labor, discourages useful undertakings and introduces decline. In this State the people elect their Judges, and thus directly determine, in large measure, the character of judicial administration. The results thus far, especially in civil justice, have not disappointed the advocates of an elective judiciary. Incompetent judges have, it is true, been sometimes elected, and the evils of mal-administration have been sometimes felt; but the Courts of Ohio, considered in general, have nothing to apprehend from a comparison with those of any other State in respect to intelligence, learning or efficiency. The amount of their labors may be inferred from the fact that the number of civil suits last year was about 30,000, in 18,000 of which judgments were rendered. The number of suits involving serious controversy of law or fact bore, however, a small proportion to the whole.

Much the larger number were prosecuted for the collection of claims, and it is estimated that nine-tenths in amount of the debts unsecured by mortgage or otherwise, which class constituted three-fourths of the whole, was recovered or is recoverable. This estimate, if at all reliable, indicates plainly the grounds on which the high credit of the business men, as well as of the State of Ohio, is established. The whole debt of her people, public and private, as I took occasion to show last year, is hardly equal in amount to one-fifth of the property in the State, and the loss by individual failure in payment, is only two and a half per cent. of the debt. The rate of commercial hazard in credits, is therefore, comparatively insignificant.

Such is the social condition of the State, contemplated in some of its most important and interesting aspects. The sketch is necessarily imperfect, for the materials are inadequate. It may, not, however, be altogether without value, while the provision judiciously made by you, and the preceding General Assembly for a more ample collection of statistical information will supply, hereafter, the means of more certain and more useful comparisons and deductions, than are possible now.

Passing from these general views to other topics of perhaps more immediate concern, permit me to invite your attention, in the first place, to our financial condition.

The Constitution requires that all property, of whatever description, and by whomsoever held, shall be listed for taxation at its true value. The revenues of the State, the Counties, the Townships, the Cities, the Villages and the School Districts, are raised by rates levied, if for State purposes, on the whole property listed, and if for local purposes, on the property listed within the proper territorial limits. The school laws of various years, but particularly of 1853 and 1854; the road and bridge laws of 1854, and other years; the poor-house act of 1831; one act of 1857; two of 1858, and some other acts of less importance, prescribe the rates of taxation.

The school acts direct the levy of one mill and six-tenths on each dollar of valuation throughout the State, for general school and library purposes, and of various rates to be fixed by the local authorities, for local purposes, such as the construction of school houses and the purchase of sites.

The road and bridge laws authorize rates for the objects indicated by their titles, varying from the twenty-fifth of a mill to nine and a half mills,

to be determined by the County Commissioners, and an additional rate not over six mills, to be levied by the County Auditor, on property adjoining roads within certain limits on the petition of the property holders.

The poor-house act of 1831, authorizes the levy by the County Commissioners of an indefinite rate for the erection of Infirmaries, and a rate not exceeding one mill for the support of the poor.

The act of 1857, requires the levy of seven-tenths of a mill for general state purposes; of nine-tenths of a mill for payment of interest and principal of the public debt; of rates for county purposes, within various limits from two to four mills, to be determined by the County Commissioners, with liberty to the Commissioners of Counties whose taxable values do not exceed \$3,000,000, to levy higher rates; of rates for township purposes, to be fixed by Township Trustees, but not to exceed one mill on the first \$2,000,000 of valuation, and one-fourth of a mill on the excess; of rates not exceeding four mills, for city and village purposes, to be fixed by city and village authorities; and of a rate for city purposes, not to exceed six mills, to be fixed by the City Council of Cincinnati.

The acts of 1858, require the Auditor of State to increase the levy for the payment of the State debt, whenever it may be necessary, in order to make the Sinking Fund equal in amount to the requirements of the Constitution and the laws, and direct the levy of seven-twentieths of a mill in each of the years 1858, 1859 and 1860, to provide means for the payment of the loan of \$700,000, authorized by the second of these acts, and intended to supply the deficit created by defalcation.

It thus appears that the rate of taxation for General Revenue, applicable to the support of the State Government, in all its Departments, Executive, Legislative and Judicial, and the payment of the cost of Public Buildings and the expenses of Benevolent Institutions, is less than half the general rate for schools and libraries, and but seven-ninths of the general rate for the public debt; while it sinks almost to insignificance in comparison with the local taxation for County, Township, City, Village and School District purposes.

It would contribute much to a clearer understanding of our revenue system by those entrusted with its administration, as well as by the people at large, if all rates of taxation were prescribed by a single law, and not by many as at present; and I respectfully recommend the expediency of such an enactment to your consideration.

The receipts of the fiscal year 1858 from taxation, tolls, convicts' earnings, and all other sources of revenue, properly so called, including the premium on the temporary loan, were \$2,931,756 17. The receipts from sales of school and ministerial lands, and the principal of the temporary loan, and the amount of July interest not called for in New York, and therefore returned to the Treasury,—all which items constitute debt rather than revenue—were \$826,965 40. The total receipts, therefore, were \$3,758,721 57. The disbursements were \$3,515,458 77, to which should be added the excess of the defalcation over former apparent balance, which was \$17,143 85, making a total of \$3,532,602 62. The balance in the Treasury therefore, at the commencement of the present fiscal year, was \$226,118 95.

The levies of each year produce the receipts of the next year. The receipts and disbursements of the current year, therefore, can at present be only estimated; the levies only which were made in part under the acts of the last, and in part under the acts of preceding sessions, are certain. The taxes paid, and to be paid, into the Treasury during the current year, arise from these levies. Referring you to former communications for information relating to former years, I shall state summarily the amount of taxable values, and of taxes levied in 1858. The total number of acres listed for taxation was 25,298,968. The valuation of these lands was \$437,183,132; that of Town and City lots, \$153,102,815; that of chattles, \$250,514,084; making the aggregate valuation of all taxable property \$840,800,031. The taxes levied for general State purposes were, for Sinking Fund, \$1,047,902; for general State purposes, \$587,206; for Common Schools, \$1,259,092; for District School Libraries, \$83,920; in all \$2,978,122. The levies for County purposes were, for County expenses, \$1,130,939; for Bridges, \$361,988; for the Poor, \$222,471; for Building, \$320,954 57; for Roads, \$350,435; for Railroads, \$462,430; in all \$2,849,220. The levies for Township, City, and other local purposes, were, for Township expenses, \$284,051; for Schools and School Houses \$1,438,811; for City, Town and other special taxes, \$1,633,816; making a total for Township and City taxes of \$3,356,678; to which add for delinquencies and forfeitures, \$572,630; making the aggregate of county and other local taxes, \$6,778,528.

A slight degree of attention to these facts will correct the common notion, that the addition to existing taxation of a new levy of some fraction of a mill, cannot be of much consequence. The levy for school libraries

is \$83,920; yet the rate is but one-tenth of a mill. It is the aggregate of such rates, which considered separately and without reference to the sums produced, seems so inconsiderable, that constitutes the total burden of taxation.

While these considerations must recommend, not to the General Assembly only, but to the local authorities even more emphatically, the duties of prudence, forbearance, and careful economy, there is yet something in the objects to which the revenues are devoted which may reconcile us, in some measure, to the taxation which we bear. A very large proportion of all the public income is expended directly for the common good. The levies for schools, school houses and libraries amount, for example, to \$2,781,822, or nearly one-third of the taxes in all forms and for all purposes. Yet who would dispense with our schools, school houses, or libraries? Who does not know that this expenditure is more than reimbursed in the enhanced value of property, and the augmented power of the people? To taxation for these and similar purposes, the proceeds being honestly and economically applied, the people cheerfully consent. They murmur, and justly murmur, when their burdens are augmented beyond the proportion of benefits by improvidence, waste or speculation. For the prevention of these evils, the people must look to the County Commissioners, Township Trustees, Boards of Education, and City and Village Councils, even more than to the General Assembly. It cannot be too deeply impressed upon the public mind, that the discretion committed to these local authorities, however limited and guarded, must be necessarily large, and that, in respect to the imposition of far the largest proportion of taxes, they constitute the real legislatures. Too much care cannot be exercised in the choice of citizens to fill these important positions.

To ensure the safest and most beneficial workings of our financial system it seems desirable that assessment, levy, collection and disbursement be brought as closely together as possible. I can see no good reason why assessments may not be made and equalized, levies determined and duplicates prepared during the last quarter of each fiscal year. This would bring levies into close proximity to collections and ensure the most exact proportion possible between values and taxes. Nor do I perceive why County Treasurers collecting revenue for the State should not be required to report their collections at brief intervals, in the same manner as the col-

lectors on the canals, and hold them subject to the draft of the Comptroller, or why their final settlements with the State Treasurer should be delayed to the late day now designated by law.

Each year's income should, as nearly as is practicable, pay each year's expenses, and no money should remain in the Treasury except what is needed for current disbursements. The act passed at your late session, providing for the semi-annual collection of taxes was, in my judgment, a wise step in the right direction, and I am glad to know, has given general satisfaction in its practical operation. The act authorizing drafts by the Comptroller upon the County Treasurers, for the taxes collected in December, just past, in order to their application to payment of the interest due on the first of the current month, was another step towards the same end. Justly obnoxious to censure as was the practice of collecting from the County Treasurers by similar drafts, in advance of their regular settlements, large sums to be added to large balances already in the Treasury or to supply the place of large balances fraudulently abstracted, it can now hardly admit of question that our safest future policy will be to pay our January interest from December and our July interest from June collections. As far as possible also, the expenses of the first two quarters of each fiscal year should be defrayed from the former, and those of the two last quarters from the latter collections. I recommend such legislation as may be deemed necessary to give practical effect to these suggestions by providing for the prompt payment into the State Treasury of the State's proportion of taxes as soon as collected, and requiring earlier settlements by the County Treasurers with the State Treasurer. Such legislation would enable the Auditor of State to lay before the General Assembly, at an early day in each session, a statement of the actual receipts from taxes in December, and the estimated receipts in June, as well of the actual and estimated receipts from all other sources during the year, and this statement would supply a basis for economical and intelligent appropriations for the ensuing three-quarters of the current and the first quarter of the next fiscal year.

A judicious law prescribing rates of levy will tend to ensure moderation in taxation; the payment of current expenses from current income will prevent the evils of accumulation in the Treasury; the restriction of appropriations to actual receipts, and of expenditures to appropriations will restrain, the former, legislative, and the latter, administrative extravagance. These, in my judgment, are the essentials of a good financial system.

Under such a system the custody of the public revenue would involve far less hazard than heretofore. Still, under any system, while collections from taxes for all purposes State and local, cannot be expected soon to fall below four millions, and may exceed, as in 1854 and in the present year, four millions and a half semi-annually, of which a moiety will not be required for disbursement, until some time after collection, and a portion will remain for six months or more, the point of custody will remain one of great importance.

The safe keeping of the public money, therefore, properly engaged a large share of the attention of your immediate predecessors, as well as of your own. The chief essential point of difference between the modes adopted seems to be that the latter, while requiring ample securities from depositaries for payment on demand, did not contemplate the withdrawal of the moneys deposited from the transactions of business, until wanted for public purposes, while the latter seems to intend the actual keeping of all public moneys in the hands of State and County Treasurers until required for disbursement in discharge of public obligations. If the safety of the public moneys is equally insured by either mode, the former appears to be entitled to preference; for money is machinery, whose work is exchange, and it is obvious that the withdrawal from use of considerable sums for considerable periods must in some measure interrupt and embarrass the operations of business. But safety is the paramount consideration, and no mode of custody is admissible which does not secure it as far as it can be secured in any mode.

■ In a former communication I thought it my duty to recommend to your consideration a plan for the safe keeping and disbursement of the public moneys, which seemed to me to combine security with convenience. That plan failed to commend itself to your approval; but you did not omit to establish by law a system of regulations, intended to accomplish the same general purpose. Few measures fulfill perfectly the designs of their authors; and some defects have become apparent in the practical workings of the act of last session to which I think proper to direct your attention.

The act itself was doubtless designed to incorporate into the administrative system of Ohio, the leading provisions of Federal legislation on the same subject. There are, however, among other differences between the Federal system and that which has been thus inaugurated in our own State, two which seem to me especially worthy of consideration. Under the Federal laws all officers having custody of public money are appointed by the Federal Government, and are required, from time to time, to an-

such bonds, with such securities as the Federal authorities may require. Under the act of last session the County Treasurers throughout the State are made depositaries of the State as well as the County revenues; of the revenues derived from canal tolls and other sources, as well as those derived from taxation. They are also constituted agents for the transfer of public funds, and fiscal agents of the State, under the law. Yet these officers are not appointed by the State Government; are not required to give bonds to the satisfaction of any State officer; no State officer is authorized to ascertain the sufficiency of the bonds actually given, or to require in proper cases new bonds or additional securities. The whole matter of these bonds is left where former laws placed it, under the supervision of the County Commissioners, and it may well be doubted, whether the conditions of those heretofore given apply to all the duties required by the recent treasury law.

This is a matter which deserves, and will, I doubt not, receive your attention. While you will probably think it best to adhere to the plan of constituting the County Treasurers State depositaries, rather than recur to the plan, which seems to me preferable, of directing the selection of depositaries by the State Treasurer, you cannot fail to appreciate the importance of throwing around the public deposits, in whatever hands, all practicable guards and securities.

The other point of difference between the Federal and State systems which seems to me most important is this: The Federal system prescribes the medium in which payments may be made into the Treasury. It directs that all such payments shall be made in gold or silver, or Treasury notes. A corresponding provision in State legislation would require such payment in gold or silver, or the notes of specie paying banks organized and regulated by State laws. The act of last session makes no provision at all in relation to this very important matter; and by the omission, seems virtually to require the receipt, for taxes and other State dues, of whatever may be current as money in the several localities where payments are made. Such has, I understand, been in fact the general if not universal construction of the act by the County Treasurers and other public officers.

Thus, construed, the act fails wholly of its intent. It allows the Treasurers to receive, and under it the Treasurers have actually received, a large proportion of the taxes in the notes of numerous banks of other States. It has thus virtually encouraged the circulation within our limits of a currency subject in no respect to the control of our legislation, and, to this

extent, has promoted deterioration rather than improvement of the circulating medium. The paper thus paid into the different Treasuries is, at best, only the representative of money in the possession of the banks which issue it; and thus, to the extent of its reception, foreign banks and not the Treasurers, have been the real depositaries of the public funds. Instead of increasing the security, it has thus increased the insecurity of custody.

I respectfully recommend the correction of these defects. If it shall be decided that the County Treasurers shall be continued as depositaries and agents for the transfer of State revenues, they should be subjected, at least in respect to these funds, to the supervision of State officers, and required to give ample bonds, to be deposited with the State Treasurer, for the performance of these duties. Nor is it less important that the medium in which taxes may be paid, be ascertained by positive legislation. A provision requiring such payments to be made in coin or specie notes of our own Banks would, in my opinion, be safe, useful and not inconvenient. It would be safe, for every dollar in the Treasury would either be specie or the equivalent of specie, made such, not merely by the solvency of the Bank issuing it, but by the guaranty of all the Branches of the State Bank, or by State and Federal Stocks in the actual custody, rendered absolutely secure by your judicious legislation, of the State officers; it would be useful, for it would promote a sound circulation of specie and specie notes; and it would not be inconvenient, for the circulation, obeying well-known principles, would increase and diminish with the demand.

The debt of the State is of two classes, reimbursable and irreducible; the former embraces the foreign and domestic liabilities payable after certain fixed periods; while the latter is constituted of the proceeds of lands, granted by Congress for the support of Schools and Religion, received into the Treasury upon sales by the State, under a pledge to pay six per centum on the amount, for the same purposes, forever.

The reimbursable debt has been sometimes spoken of as the whole debt of the State, but the irreducible differs from it in nothing except that it is permanent, and incapable of reduction, but on the contrary, certain to be gradually increased until the last proceeds of School and Ministerial lands shall be received. It follows that no real reduction of the amount of the State debt can be effected except by payments exceeding in amount the sums derived from these lands.

During the last year the reimbursable debt was increased by \$700,000, being the amount of the temporary loan authorized at your recent session, and the irreducible by \$69,602 88, being the amount of proceeds of School and Ministerial lands received into the Treasury. It was diminished by the payment \$12,004 00 of foreign debt. At the commencement of the present year the aggregate debt of all descriptions was \$17,169,972 84.

Of this, the sum of \$6,413,525 27 will become payable after the 31st of December, 1860. I have heretofore invoked the attention of your predecessors, as well as your own, to this maturing liability; urged the propriety and necessity of seasonable provision for it, and suggested what seemed to me the best modes of making that provision. It is to be regretted that no provision has been made. It seems highly probable that, had the necessary authority been conferred by the Legislature on the Commissioners of the Sinking Fund, the means to pay so much of this debt as will not be discharged by other resources, might have been obtained during your recess, through a new loan at five per cent. or even a less rate. It may be that such a loan can yet be negotiated, and I trust that the magnitude of the saving to be thus effected will command for this subject your earliest attention.

Under the operation of the very salutary act of the last session in relation to the Sinking Fund, the sums legitimately belonging to it, but heretofore appropriated under legislative sanction, to other State purposes, will doubtless be replaced through the additional levy required by the act, and future diversions to any other uses than those to which the Fund is pledged, will be prevented. Under another act providing means for reimbursing the temporary loan, over two hundred thousand dollars will soon be paid into this fund. It will not be required for payment of the loan until July, 1860. Provision should be made for its safe and productive investment during the interval.

An act of the last session prescribed a rule for the uniform taxation of banks. The justice of such a rule cannot be successfully impeached, nor can it be denied that property employed in banking should bear a proportion of the common burden equal to that imposed on other property. Upon the point whether the rule prescribed is in fact equal, differences of opinion may well exist; but repeated decisions of the Supreme Court of the State leave no room for question that the rule of the act is, sub-

stantially, the rule of the Constitution; or for expectation that it can be materially changed, while the Constitution itself shall remain unchanged.

It is claimed, however, by the banks organized under the act of 1845, incorporating the State Bank of Ohio and other Banking Companies, that the section of that act, prescribing the rule of taxation for them, is a contract, not liable to be impaired by subsequent legislative or constitutional provision; and that they are, therefore, not liable to be taxed by a different rule, however warranted by constitution or law in respect to institutions not similarly protected. This claim, originally asserted against the rule of taxation established by the act of 1852, was denied by the Supreme Court of the State, but sustained by the Supreme Court of the United States. Notwithstanding the latter decision, the Supreme Court of the State, in a judgment of December Term, 1857, has announced its adherence to its original position. The claim of the Banks therefore cannot be recognized as valid by the officers of the State.

These institutions, however, relying upon the decision of the Supreme Court of the United States, have placed to the credit of the State, as heretofore, the taxes required by the act of 1845, and have made no return for taxation under the act of last session. In some instances injunctions have been obtained from the Federal Courts, restraining the proper officers from the execution of the law. These injunctions and some defects in the act indicated in the Report of the State Auditor, have prevented any collection of taxes under it, while the law itself has prevented the collection of the sums set off in lieu of taxes under the act of 1845.

These circumstances have caused some diminution of the revenue, and present the question whether the State will again contest in the Federal Courts the claim to exemption set up by the Banks, or so modify the act of last session as to save the Banks claiming it from its operation. Should the first of these alternatives be preferred, some amendment of the act may be found necessary, and adequate provision for the unavoidable litigation should be promptly made.

The acts of the last session, appointing certain citizens to appoint Directors of the Penitentiary and Commissioners of the State House, having been adjudged unconstitutional by the Supreme Court, the Board of Directors and the Board of Commissioners organized under the act of 1856 have continued in the discharge of their respective duties.

The increase of the number of convicts beyond the number of cells, renders it indispensable to provide for the enlargement of the existing,

or the construction of a new Penitentiary. Considerations of economy recommend the former alternative. Provision should also be made within the Penitentiary enclosure for convict lunatics. The General Assembly in 1845 directed such provision, but the necessary appropriations having never been made, the direction has never been executed. In the absence of proper accommodation in the Penitentiary, such lunatics must be transferred under Executive warrant to one of the existing Asylums. This is clearly wrong. The criminal insane should never be introduced into Asylums, where the innocent and the respected, suffering under the most fearful of calamities, find their best refuge.

The work on the State House advances towards completion under the vigilant and judicious supervision of the Acting Commissioner and his associates. Some alterations and additions are suggested by the architect, which would certainly improve the proportions and enhance the simple grandeur of this noble structure. It will be for you to determine whether the condition of the Treasury will warrant your sanction of them.

The rooms for the Library will soon be completed. A small part only of the small appropriations made for books has been expended for several years past. The Commissioners thought it injudicious to make considerable additions to the library, before it could be properly classified and permanently arranged. They now propose to make only such as seem most clearly necessary. The statements of their report in relation to the arrangements made for exchanges within the past year, by which many valuable works have been and more will be obtained, as well as its suggestions generally, will properly receive your attention.

The collection of Arms required by your predecessors has been completed, and a statement of the result will soon be laid before you. The proceeds of sales of that portion unfit for service cannot with propriety be appropriated to other than military purposes. No more beneficial application of them will probably be suggested than to the construction of a State Arsenal, and I therefore recommend their appropriation to that object.

There is probably a considerable quantity of arms yet uncollected. These are so scattered that the cost of collecting them by special agents would exceed their value. It may be expedient to require the Prosecuting Attorneys and Sheriffs of the several counties to collect and forward to the State Arsenal such as they can find, and to provide for their compensation by a liberal per centage.

To prevent as far as practicable future misuse and loss, I recommend that hereafter no arms be issued until bonds with sufficient sureties for their safe-keeping and use according to law, shall have been deposited with the Quarter-Master General.

Among the subjects proper for your consideration, that of the extradition of fugitives from justice may well have place. Warrants of extradition issued upon requisition from other States have been sometimes used for the purpose of extorting compromises or enforcing payment of pecuniary demands. Such use is gross abuse, and should be arrested by penalties adequate to the object. Some latitude of discretion has been exercised by my predecessors as well as myself in respect to the surrender of persons charged in other States with offenses not punishable as crimes under our own laws. The general rule has been to refuse interposition in such cases. It deserves consideration whether the exercise of this discretion, especially in cases of indictment for obtaining goods by false pretenses may not, with advantage, be regulated by law.

It is with great satisfaction that I again direct your attention to the State Reform Farm. Two years since such an establishment in this country was an untried experiment. It is no longer an experiment, but a success. That it is so is due, first of all, to the prudent and yet liberal legislation of your predecessors and yourselves: but in no less degree to the fidelity, discretion, energy and economy which has characterized the administration of the Acting Commissioner and his associates. In obtaining large results from expenditures comparatively small; in method of accounts, and in full and clear exhibition of its working and condition, this Institution may justly be proposed as a model to similar establishments.

The whole number of boys committed to the Institution is forty-eight, of whom fourteen have been honorably discharged, and one has escaped. One hundred and twenty can be accommodated in the three family buildings already erected, and the three similar buildings soon to be constructed will admit one hundred and twenty more. The number of buildings can be increased indefinitely as wanted, at very moderate cost, but it is not probable that any others than those now contemplated will be needed for several years.

It has been suggested that the farm and family system adopted in this Institution may be usefully introduced in the care and education of deaf mutes, and the suggestion merits careful consideration.

I venture to recommend, in this connection, legislative provision for meetings, from time to time, of the Superintendents of the various Benevolent and Reformatory Institutions of the State for comparison and improvement of plans of administration, methods of reporting, and systems of accounts. I cannot doubt that much good would result from such conferences.

I suggest, also, that the time for making the reports now directed by law to be made by the 20th of November, be extended to the first of December in each year, and that the provisions of law applicable to these documents be so extended as to embrace all reports required to be laid before the General Assembly. Such a regulation, uniform in operation and duly enforced, would essentially aid the Executive in preparing a proper statement of the condition of the State, and greatly facilitate the dispatch of business by the Legislature. Such reports as have been prepared and printed will be promptly laid before you.

No financial interests more important than those connected with the Public Works demand your care. The immense sums invested in them; their extent and magnitude; their business relations, and the large revenues collected and disbursed in their administration, justify the solicitude always felt by the people concerning their condition and management. The Constitution confides their superintendence and control to a Board of three members; and to secure the constant advantage of judgment improved by experience, through the constant presence of some members who have served for considerable periods, assigns three years as their term of office, and requires the election of one member each year. The authority, entrusted to the General Assembly, to prescribe the powers and duties of the Board and its several members must, in my judgment, be limited necessarily by its nature and object. So limited, it is an authority to prescribe the powers and duties of the Board in general superintendence and control, and not an authority to divest the Board of these constitutional functions; it is an authority to prescribe the powers and duties of its several members in subordination to the Board, and not an authority to constitute each member an independent Board, in separate and substantially uncontrolled charge of the whole or part of the Public Works. If not so limited, the authority of the General Assembly over the Public Works is clearly unlimited. It may restrict the superintendence of the Board to the Walhonding Canal with its insignificant revenue of seven or eight hundred

dollars a year, and give to some one member the entire management of the rest. It may abrogate the Constitutional Board of three members, and substitute three Legislative Boards of one member each, giving in charge to each just as much and just as little of this great and important property as it may see fit. I cannot think that such a construction of the Constitution can commend itself to your judgment, and I therefore venture to recommend the reconsideration of those provisions of the act of the last session which divide the Public Works into three sections, and, excluding virtually all superintendence of the Board, commit each section in appointment of officers, disbursement of moneys, and general management, to a single member.

In this connection, the system of repairs and payments on these works should receive consideration. Under the act of the last session, the member in charge of each section, appoints the Engineers assigned to it. These Engineers certify claims for work and materials to the Member in charge; the Member in charge, upon these certificates, draws his check on the Auditor for payment; and the Auditor is required, without further evidence of the claim, to issue his warrant for the amount upon the Treasurer. No fact has come to my knowledge exciting suspicion that this large discretion in the expenditure of the large sums appropriated for the Public Works has been abused, but it is certainly worthy of consideration whether the principle of checks and limitations upon disbursements which has been applied in other departments of expenditure may not be properly introduced into this.

The extraordinary floods of the last summer were attended by disastrous consequences to the canals. So numerous and extensive were the injuries to the southern portion of the Ohio Canal and on the Hocking Canal that it was impossible to make the repairs necessary to navigation, and consequently to revenue, without considerable expenditures beyond the sums appropriated to that purpose. In this emergency I did not hesitate to advise what the interests of the State clearly required, prompt repairs and payment as far as the money could be spared from the Treasury, by drafts in excess of the appropriations. I do not doubt your approval of what was then done, or that provision will promptly be made for the drafts drawn in this emergency; but to guard against the recurrence of similar exigencies, I recommend that a contingent fund be provided by law, from which

expenses made indispensably necessary by unforeseen contingencies of this character, may be regularly paid.

The expenditures on the Public Works have, during the past year, again exceeded the revenues, and the question of their future disposition must necessarily demand your attention. My own views upon this subject have been sufficiently stated in former communications. The policy of sale in proper sections, for adequate prices, under such guards and restrictions as will ensure the continued use of the canals for the purposes they were designed to serve, and exclude the control of the interests now competing with them, will probably best fulfil the wishes of a majority of the people. Neither public sentiment, however, nor sound policy recommends a sale for less than their real value, not measured by one or two years of disaster but ascertained by thorough examination of all the determining circumstances, or without such limitations as will ensure, beyond any probable contingency, the ends of their construction.

The agricultural progress of the State during the past year has been steady, and upon the whole satisfactory. By the unfavorable weather and the attacks of insect enemies some crops have been diminished, and some almost entirely destroyed, while one or two have exceeded the usual average, and the deficiency in quantity of others has been compensated by excellence of quality. The health of the people has been good, and constant improvement has characterized the instruments and methods of cultivation. I renew the recommendations addressed to you at your last session relating to this great and leading interest; and especially recommend to your attention the admirable Report of the State Board, which cannot fail to exert a most beneficial influence.

I think it my duty again to recommend to you, the repeal of the act allowing interest at the rate of ten per cent. It would be far better, in my judgement, to leave the subject of interest without regulation than to regulate it in such a way as to encourage usury, embarrass enterprise, and impoverish industry.

My opinions, fully communicated to you at your last session, in respect to the just claims of this State upon the Federal Government, as well as in respect to the proper interest of Ohio in the due administration of that Government, and, especially at this time, in its action upon the momentous question of Slavery, remain unchanged and need not be restated.

Permit me to congratulate you upon the auspicious circumstances under

which you resume the grave duties of legislation. The storm of financial disaster which swept the land in the summer and autumn of 1857 has abated, and, though its effects are yet visible in much remaining embarrassment, there is every reason to anticipate the speedy return of general prosperity. The defalcation which then oppressed our finances, has been supplied by your provident legislation; and general fidelity and efficiency have marked the several departments of administration. From this point we may well look to the future with hope and confidence. Differing, as we often may, as to the best means of promoting the public welfare, yet, differing ever with mutual respect and mutual personal good will, we may often find ourselves able to harmonize differences by mutual concessions, and combine our efforts for the common good. Accept my assurance that in all your endeavors towards this sole end of virtuous patriotism, you may confidently rely upon my zealous co-operation, and that my sincerest wishes will be accomplished, if, under the guidance of Divine Benignity, your legislation shall be directed to such prosperous issues that this General Assembly may ever be remembered with gratitude by the People of Ohio.

S. P. CHASE.

COLUMBUS, January 3, 1859.

TWENTIETH ANNUAL REPORT

OF THE

BOARD OF PUBLIC WORKS,

TO THE

GOVERNOR OF THE STATE OF OHIO:

FOR THE YEAR 1858.

OFFICE OF THE BOARD OF PUBLIC WORKS,
COLUMBUS, O., *December 23, 1858.*

SALMON P. CHASE, *Governor of Ohio:*

SIR: In conformity with the provisions of law I herewith submit the
Twentieth Annual Report of the Board of Public Works.

By order of the Board,

A. G. CONOVER, *President.*

9—EX. DOC.—PART II.

TWENTIETH ANNUAL REPORT

OF THE

BOARD OF PUBLIC WORKS.

The Public Works of the State were, on the sixteenth of February last, divided by the Board and placed in charge of the members as follows:

Division Number One comprised the Miami and Erie Canal and the Western Reserve and Maumee Road, and was placed in charge of Alexander G. Conover.

Division Number Two comprised the Ohio Canal, from Lake Erie to the foot of lock number seventy-nine, north of Licking Summit, the Walhonding Canal and the Muskingum Improvement, and was placed in charge of Abner L. Backus.

Division Number Three comprised the Ohio Canal, from the foot of lock number seventy-nine, north of Licking Summit, to the Ohio River, and the Hocking Canal, and was placed in charge of John Waddle.

The law passed April 12, 1858, "for the regulation of the Public Works of the State of Ohio," changed the Divisions, constituting them in the following manner:

"Division Number One shall consist of the Miami and Erie Canal, from the Indiana State Line, including the Junction, to Lake Erie; the Ohio Canal, from Cleveland to the lower lock in Lockville, Fairfield county, including the town of Carroll, and the Western Reserve and Maumee Road.

"Division Number Two shall consist of the Ohio Canal and feeders, from the lower lock in Lockville, Fairfield county, to Portsmouth, in Scioto county; the Walhonding Canal, the Muskingum Improvement and the Hocking Canal.

"Division Number Three shall consist of the Miami and Erie Canal from Cincinnati to the south line of the village of Junction, in Paulding county, and the Mercer, Loramie and Lewistown Reservoirs, and the Sidney Feeder."

The same law required that each member of the Board of Public Works should be placed in charge of that division of the Public Works nearest to

which he resided, and under this provision Abner L. Backus was placed in charge of Division Number One, John Waddle was placed in charge of Division Number Two, and Alexander G. Conover was placed in charge of Division Number Three.

The Board respectfully submits detailed reports of each division, prepared by the member having the division in charge; and also report such general matters, relating to the entire Public Works of the State, as the Board deems useful to the General Assembly.

DIVISION NUMBER ONE

Of the Public Works extends, on the Ohio Canal, from the lower lock at Lockville, in Fairfield county, to Cleveland; the Miami and Erie Canal, from Manhattan, in Lucas county, to the Indiana State Line, including the Six Mile Reservoir, in Paulding county; the Western Reserve and Maumee Road, and is under the charge of Abner L. Backus.

NORTHERN DIVISION MIAMI AND ERIE CANAL

Has a depth of six feet and sixty feet surface, from Manhattan to the Junction, a distance of seventy miles: from the Junction with the Cincinnati line, in Paulding county, to Fort Wayne, in Indiana, a distance of forty-two miles, the depth is five feet, and fifty feet surface, with locks fifteen by eighty-seven and a half feet in the chamber.

That portion of the canal from the Junction to the Indiana State Line, a distance of twenty miles, without endangering the locks or embankments, may be deepened one foot, at an expense less than one thousand dollars, thus giving a depth of six feet of water from Manhattan to the Indiana State Line, a distance of eighty-eight miles.

Navigation was opened on this line on the first of April, and, with the exception of six days detention in repairing a culvert on the eighteen mile level, near Maumee City, was successfully kept up until the close of the fiscal year.

The extraordinary floods which swept over a large extent of territory in June last, visited the Indiana portion of this line of canal with most disastrous consequences, washing away at points the entire canal, in other places undermining and washing out dams, aqueducts, culverts, bridges, and filling up the canal with deposits of earth, involving great expense, together with

the loss of more than *three months* navigation, from the tenth of June until the twentieth of September. This disaster, occurring as it did at a season of the year and in a section of country, that furnishes a large proportion of trade for this line of canal, and before the corn and wheat had been entirely forwarded, resulted in very great loss to the revenue of this canal, that would otherwise have been paid on property shipped in Indiana and bound for an eastern market. In many instances shippers, fearing that the repairs on the Indiana portion of the canal could not be made so as to secure a reliable means of getting forward the surplus produce of the country during the busy season of the fall, entered into arrangements to send their property to market by other and more expensive channels.

There has been shipped during the past year, at canal points between Toledo and West Point, in Indiana, by the Wabash Valley Railroad, one of the competing lines for the surplus produce, nine hundred and twenty thousand bushels of grain, which has been received at the city of Toledo; an amount that would have furnished four hundred and sixty canal boat loads, and have added at least ten thousand dollars to the revenue of the canal between Toledo and the Indiana State Line.

The unsafe condition of the north bank of Six Mile Reservoir, which answers the double purpose of a berm bank to the canal and a reservoir bank, made it necessary to enter into an unusual expenditure during the past season in rebuilding about one-half of the earth embankment above low water, and protecting the same permanently with a stone slope wall, a distance of one and a half miles. This work was estimated to cost three thousand dollars (\$3,000.) There has been expended during the past season, in labor and stone, eleven hundred dollars (\$1,100.) The work will be resumed in the spring as soon as the water gets sufficiently low to commence operations.

This reservoir was finally completed and filled in the fall of 1842; is located on the south side of the canal, six miles from the Indiana State Line, having the advantage, by a short side cut from the canal, of receiving the surplus water from Indiana in the spring, and depositing it in the reservoir for the late summer and fall use of the canal. At the time of its completion the drainage of the country for fifteen miles to the west, and an average of four miles to the south, together with a large amount of water in the spring from the St. Joseph river, by the Indiana canal, was received into this reservoir. One half of the supply from the west was cut off by the

construction of the ditches of the Wabash Valley Railroad, crossing the canal, in 1855, between the reservoir and the Indiana State Line, which water was conveyed under the canal by a culvert at Antwerp. The railroad thus cutting off a very important channel for the supply of the reservoir, it became apparent to all who were in the least conversant with the country, and the amount of water flowing by natural channels into it, that the resort would inevitably have to be made to the St. Joseph river, by the way of the Indiana canal, in order to supply the deficiency created in the loss resulting from this railroad cut-off. With all the ordinary supply of water and freshets flowing into this reservoir, for the past *sixteen years*, the capacity of the weirs and the flood gates originally constructed were found to be abundantly adequate to pass the surplus water, and at all times to protect and insure the safety of the embankments, and instead of adding to the capacity to dispose of the surplus it becomes necessary now to look to other sources for supply of water to keep up the required head in the reservoir for the supply of canal navigation in the dry season.

From Defiance to the Indiana State line, a distance of twenty-eight miles, there are thirteen wooden locks, eight of which will require to be rebuilt from the foundation, during the coming season, at an estimated cost of five thousand five hundred dollars (\$5,500) each. Four of these locks are located in the town of Defiance, three within four miles, and one at the northeast corner of the Six Mile Reservoir. These locks were originally completed in 1842, and so constructed as to keep the first or lower story of the lock constantly submerged, and to enable the upper story, which was exposed, to be removed and rebuilt without interfering with the story below, or the foundation of the lock. They were rebuilt from the lower story in the winter of 1850 and 1851, and are now in a dilapidated condition, requiring close and constant attention in order to keep them in a condition to pass boats. There will be required fifteen hundred dollars (\$1,500) during this winter, to place these locks in repair to meet the demands of the coming season of navigation.

Wooden locks were constructed on this line of canal at a time when the engineers of our State had but little knowledge of them, and when they were considered as rather an experiment. The experience and use of them for the past sixteen years has enabled those in charge so to perfect the plans, that in their reconstruction they can be so built as to add twenty-five per cent. to the time they would with safety stand under the old plans. It

has also been ascertained that they can be built for about one-third the cost of stone, and can be again rebuilt once in eight years with six per cent. per annum on the difference of the cost as compared with stone.

The towing path of the Defiance slack-water, owing to the effects of the high waters and ice freshets for the past fourteen years, in very many places has been so reduced in width as to endanger the safety of boat teams in times of high water; especially within the corporate limits of the town of Defiance are the effects to be seen, the docking and towing path having been almost entirely removed, leaving the teams the only alternative to trespass upon the private property of the citizens in order to pass. There will be required fifteen hundred dollars (\$1,500) in order to place these, the worst points, in a condition of safety.

The dams at Independence and Providence, the former six hundred and fifty in length, and nine feet in height, was constructed with stone abutments and timber cribbing bolted to a rock foundation, in 1842. The Providence dams are seventeen hundred feet in length and four feet in height; were constructed in 1844. Both dams have been in a condition for the past four years that required constant repairs in order to prevent them from being washed away, and at the same time to maintain the requisite height of water in the pools required for navigation. A contract was entered into in the fall of 1857, by the Commissioner last in charge of this portion of the canal, to construct an entire new dam immediately below and adjoining the old one at Independence. Owing to the continued high water during the past summer, operations were not commenced until late in the month of August, and not admitting of time sufficient to finish the work before the fall rains. Four feet in height and entirely across the river is in and securely fastened, it is believed, so that the effects of the ice of the winter and the high water of the spring, will not seriously injure it. The estimated cost to complete this dam and the necessary stone protection on the banks below the abutments, is five thousand three hundred dollars (\$5,300).

The Providence dam, extending from the canal to the Island in Maumee River, is eleven hundred feet in length and four feet in height, and was constructed by adding on two feet to a temporary dam, erected in 1839, by contractors engaged in building stone locks and culverts west of Providence, and has required large yearly expenditures of money to sustain the water in the pool and prevent the dam from being swept away by spring

freshets. During the high water of June last, three hundred and fifty feet of this dam was carried away, involving an expenditure of two thousand dollars (\$2,000) in its repair. The remaining portion of this dam will require to be rebuilt during the coming season. That portion of the Providence Dam between the Island and the Gilead side cut was constructed entirely new in 1844, and is six hundred feet in length and four feet in height, having one stone, and one wood abutment, and will require for its repair during the coming season five hundred dollars (\$500).

The towing path of the Providence slack water, a distance of two miles from the guard lock, at the head of the eighteen mile level, to the lock entering the river at the west, was originally constructed with a timber dock in 1843, which, owing to the decay of the wood, and the operations of the ice and water, has been reduced in height to low water mark, which entirely prevents the occupation of the towing path bank during the high water of the spring. A towing path, constructed of earth, and protected with stone upon the river side, ~~has~~ been projected, and will require an expenditure of two thousand dollars (\$2,000) for its completion.

The Gilead side-cut, extending from the south abutment of the Providence dam to Purdy's mills, in the town of Gilead, was authorized to be built by the Legislature, March 12, 1845, on which the State has, since its completion, collected tolls, was originally designed to be so constructed as to admit of its being navigated by boats carrying the usual amount of tonnage. Through the design or negligence of the engineer who constructed it, the rock bottom was not excavated to the depth required, and the banks but poorly and imperfectly built, which was not in accordance with the contract entered into by the then acting commissioner in charge of the work with James Purdy, to satisfy in full a riparian claim held by him against the State at this point. This side-cut has, owing to its improper manner of construction, been constantly liable since its completion to breaks in the spring of the year. In order to put this portion of the canal in repair, and fulfill the obligations of the State to Mr. Purdy, two thousand dollars (\$2,000) will be required.

- The stone weirs attached to one of the locks at Maumee and Texas have given way, and will require an expenditure of five hundred dollars (\$500) to rebuild them the coming season. The towing path in many places, between the outlet lock of the Toledo side-cut and its termination at the foot of Summit street, in the city of Toledo, was forcibly taken possession

of by persons who have constructed houses upon the ground formerly occupied by the towing path. Suits were instituted against the parties to recover possession, in 1857. By a recent decision of the Lucas County Court the claim of the State was sustained: the obstructions will be removed and the towing path will be again occupied, as was originally designed by the agents of the State, who took possession of, and appropriated, the ground at the time of the final location of the canal in 1837, and publicly advertised and let the work necessary in order to make a towing path, to be done upon the same ground which has been recently in controversy.

The canal from Manhattan to Toledo has become impassable only for boats of very light draught. The lock gates at Manhattan have given way, and timber breast walls have been placed at the lower recesses, in order to keep up the levels. The removal of the deposits at a few points and the reconstruction of the lock gates at Manhattan, and the rebuilding of the aqueduct at Swan Creek, would again place this portion of the canal in good repair, which would be alike advantageous to the citizens and the State.

The decision of the Supreme Court, in April last, declaring the law under which the Board of Public Works, in 1855, let the repairs of the canals for a term of five years, unconstitutional, the contractors on this canal declined to accept the benefits of the ninth section of the act of April 15, 1857, making appropriations for the Public Works of this State, which authorizes the Board of Public Works to appoint appraisers to appraise the tools, boats and materials belonging to the contractors, and to pay them for the same out of the repair fund.

There will be required for the pay of superintendents, lock-tenders, laborers, and materials for the repairs on this line, nineteen thousand five hundred dollars (\$19,500) for the coming year.

WESTERN RESERVE AND MAUMEE ROAD

Extends from Bellevue, in Huron county, to the Maumee River Bridge, at Perrysburg, in Wood county, a distance of forty-seven and a half miles.

That portion of the road between Fremont and Bellevue, a distance of fifteen miles, was constructed with gravel upon a road bed imperfectly made, and in very many places so nearly upon the level with the water in the side ditches, that the road during the wet seasons of the spring and fall is left in a bad condition, and requiring large expenditures in its repairs. In

order to partially remedy this there will be required two hundred dollars (\$200) in deepening and extending the side ditches.

Gravel can only be procured at two points on this portion of the road; one at Fremont, and that is only accessible when the Sandusky Bay and River are very low; during the past season, owing to the high water, no gravel was had at this point. The other gravel pit is three miles west of Bellevue, and three-quarters of a mile north of the road. When gravel can be procured at both points, there is an average haul of four miles, at an expense to the State of over a dollar for each cubic yard of gravel thus delivered upon this portion of the road. Fifteen hundred dollars worth of gravel is estimated to put this portion of the road in good repair the coming season.

There are ten bridges on this portion of the road that were constructed at the time of building the road, and are now in a condition requiring to be rebuilt during the winter or early spring; they will cost three hundred and fifty dollars (\$350).

The bridge across the Sandusky River at Fremont, is three hundred and ninety feet in length, was constructed on limestone abutments and piers, in a very substantial manner, with a double wagon track, and capacious foot ways on each side of the bridge, and is also enclosed and covered with a pine roof. Two hundred and fifty dollars (\$250) will be required in relaying the plank flooring of the roadways to this bridge.

The road from Fremont to the Maumee River, thirty-two and a half miles, was constructed in a most permanent and substantial manner with a superior quality of broken limestone, with a road bed raised to a height entirely beyond the reach of the water in the side ditches, which are large and capacious, with a fall sufficient to carry off the spring and fall freshets without damaging the road. There will be required three hundred cords of broken stone and gravel for the repair of the road between Fremont and Woodville, the coming year, at an expense of two thousand dollars (\$2,000).

There is a balance due on a contract let by the late engineer in charge of this road, for broken stone delivered between Woodville and Fremont, of six hundred and eight dollars (\$608).

From Woodville to the Maumee River Bridge, a distance of seventeen and a half miles, there will be required of broken stone and gravel, two hundred and fifty cords, at an expense of fifteen hundred dollars (\$1,500).

Two culverts in the town of Perrysburg are also required to be built, and will involve the expenditure of two hundred and fifty dollars (\$250).

The road in passing over the valley at the upper end of the town of Perrysburg to its connection with the Maumee River Bridge is liable to be overflowed and very materially damaged by the ice freshets of the winter and spring. The original design was to have constructed a guard bank between the abutments of the railroad and river bridges and effectually protect the same with stone; the length of the required embankment is three hundred feet, and will require for its construction, including the stone protection, nine hundred dollars (\$900).

In addition to the amount above required, there will be necessary for the pay of the superintendent's salary, the hire of teams and labor, and the purchase of tools, twenty-seven hundred and fifty dollars (\$2,750).

This road constituted Section Number Eight, as let by the Board of Public Works in 1855, to keep the same in repair for five years. The law, under which the work was let, having been declared unconstitutional, the contractor was notified of the willingness of the acting commissioner in charge, to appoint appraisers to estimate the value of the materials on hand and owned by the contractor. The contractor declined having the commission appointed.

The cost of this road to the State was over three hundred and thirty thousand dollars (\$330,000), and although it has at no time paid into the treasury, after deducting repairs, on an average more than one and a half per cent. upon its cost, yet there is no portion of our Public Works that has, considering the amount of money expended upon it, produced more satisfactory results. The country through which it passes is unsurpassed for fertility of soil, and owing to its richness and the want of proper drainage, the original government road was impassible a portion of the year. That portion of the road between Fremont and Perrysburg was, almost throughout its entire length, surrounded by an unbroken wilderness, with the most fertile lands in our State in market at from one dollar and a quarter to two dollars and a half per acre, up to the time of the passage of the law making appropriations for its improvement. Within thirteen years, and since the completion of the road, the wilderness has disappeared and the finest and most productive farms of our State have taken the place of the wild forests and dismal scenery of the "Black Swamp." The amount of taxable property that has been added to the list,

had it not been for the wise policy of the Legislature in making appropriation, would have now been comparatively nothing.

NORTHERN DIVISION OHIO CANAL

Extends from Cleveland to the lower lock in Lockville, Fairfield county, a distance of two hundred and seven miles, was put in repair and opened for navigation on the eighteenth day of April, and continued uninterrupted during the season, except that portion south of the Licking Summit, which, owing to the high water of the spring, the repairs could not be made with safety to the canal. This, however, caused no detention to through navigation, as the southern division of this line and the Hocking were not then navigable.

The ordinary spring repairs, as well as those necessary to be made during the season of navigation, were well and promptly made; extensive bars and deposits, many of them the accumulations of years, were removed; dams, feeders, aqueducts, culverts and reservoirs were strengthened and protected; banks, rendered defective and insecure, have been raised, and as effectually and permanently repaired as could be done and keep within the limits of the appropriations.

Owing to a judicious and economical use of water in the Licking Summit Reservoir, during the dry season of the year, it is believed that the canal has been kept in better navigable condition than for several years, and the State relieved of the great expense that has attended the lighting of boats over the "Deep Cut," and, at the same time furnishing the levels south of the reservoirs with a supply of water that has afforded boats carrying more than usually large loads with sufficient water to pass without detention.

The high water of the past season, that proved so disastrous to many portions of the Public Works of this, and the State of Indiana, rendered it necessary and important for the engineer and the superintendent, having the immediate charge of this portion of the canal, to be constantly watchful and attentive to their duties, and to their great experience and strict attention, night and day, to the duties that devolved upon them, during the continuance of these floods and freshets, is attributable, perhaps more than to any other cause, the success of averting the great damage that would otherwise have resulted to the State on this division of the canal.

The encroachments of the Cuyahoga River upon the embankments of

the canal at various points between Cleveland and the eighteen mile lock, have so far endangered their safety, that it will require during the coming year at least six hundred piles, an average length of thirty feet, and fourteen hundred perches of protection stone, at a cost of three thousand dollars (\$3,000), in order to prevent the more exposed portions of the canal along the valley from being entirely swept away.

At and in the vicinity of Boston, in Summit county, there will be required six pairs of new lock gates during the next season at a cost of nineteen hundred dollars (\$1,900).

The original number and capacity of the paddle-gates along this canal have been found to be entirely inadequate to pass, with that degree of facility, the boats navigating the canal. It has now become apparent that the number and size must be increased, in order to keep pace with the improvements and facilities in the transportation of property that are offered by other competing channels. The original size of the gates was two feet square, and the number in each lock was four. The size now adopted, and which will hereafter be used on this line, is two and a half feet square, and eight in number. Was this improvement extended the entire length of the Ohio Canal, it would materially reduce the cost to the producer of forwarding his surplus produce to market, and be a gain of two days to each canal boat making the round trip from Cleveland. This would incur an expense to the State, in addition to the old plan, of about forty-five dollars for each lock.

A portion of the north abutment and one of the wing walls of the aqueduct crossing the Cuyahoga River at Peninsula, in Summit county, which was not repaired last spring, is in a condition liable to fall at any time and will require in its repair three hundred perches of cut stone masonry, at a cost of two thousand dollars (\$2,000), and should be rebuilt before the opening of navigation in the spring. Twenty feet of a cut stone culvert at Furnace Run, in Summit county, fell in July last, and was temporarily repaired, to continue navigation during the season. Seven hundred dollars (\$700) will be required in permanently repairing it, which should be done before the opening of the canal in the spring.

The Yellow Creek feeder dam, designed to supply the canal with more water, made mention of in a former report as having been put under contract, has been abandoned, owing to the supply of water to be derived

from this stream in the dry seasons, when the canal would only require it, not justifying the expense that would be incurred in its construction.

There was expended on the twenty-one locks at Akron and vicinity, before the opening of navigation last spring, twenty-one hundred dollars (\$2,100) in repairs on lock-gates and waste weirs. Eight new pairs of lock-gates will be required to be built this winter for these locks at an expense of two thousand dollars (\$2,000).

The Pennsylvania and Ohio Canal intersects here with the Ohio Canal, and has been, up to within the past three years, the only channel through which all the iron and manufactured articles of Pittsburg passed, in order to supply Cleveland and the entire Lake regions, and would now be used if the managers of this Cross Cut Canal would permit the boating interest to come into fair and honorable competition with the Mahoning Railroad. The stockholders and directors of this railroad company are the managers and controllers of the Pennsylvania and Ohio Canal, and have so arranged their tariff of prices upon the canal and road as to force shippers and producers to send forward their merchandise and produce by this, the more expensive route, and at prices, it is believed, far above the amount it would cost to transport the same property by the canal. The canal tolls have been so raised as to amount to a prohibition, forcing the canal boat interest to seek other thoroughfares in order to find business. The gross receipts of the Pennsylvania and Ohio Canal have dropped down from *fifty thousand dollars* (\$50,000), in 1856, to less than *twenty-five thousand dollars* (\$25,000) in 1858. The shipments at the Akron office on the Ohio Canal have declined in the same time 106,037 tons.

The controlling interest thus exercised by the Mahoning Railroad Company over the Pennsylvania and Ohio Canal, in directing the channel through which the great exports from Pennsylvania shall pass, has produced at this point the great falling off in our revenues, and at the same time levied a direct tax upon the producer and manufacturer, depriving them of the use of this cheap communication in order to get their produce and merchandise to market, and at the same time maintain and support the Mahoning Railroad, which is the more important interest of this Company.

The little Cuyahoga Feeder dam has been rebuilt during the past year with stone, in a substantial and permanent manner, at a cost of about two thousand dollars (\$2,000). The race leading from the Portage Reservoir

was repaired during the past season, as also the towing path bridge and embankment across the Summit Lake.

Lock number four, south of Portage Summitt, of seven feet lift, at Canal Fulton, will require rebuilding during the coming year at a cost of seven thousand dollars (\$7,000). A number of locks on this line, the above being one of the number, were built at the time of constructing this portion of the Ohio Canal that are now in a condition requiring to be rebuilt in order to secure the safety of navigation during the coming year.

That portion of the Sandy and Beaver Canal recently adopted by the State, which is now used as one of the feeders of the canal, will add very materially to the expenses of this line. The aqueduct across the Tuscarawas River, at Bolivar, a wooden structure, five hundred feet long, constructed in 1838, has now been standing over twenty years, and has so far gone to decay, as to be unsafe for a boat to pass through it, and will require rebuilding the coming season, in order to render this very important feeder of any avail whatever to the State. If this aqueduct is permitted to fall and the feeder abandoned, other sources, attended with more expense, will necessarily have to be looked to in order to supply the deficiency thus created in the amount of water required to keep the levels now depending upon it, and to secure a stage of water required for navigation purposes. Should the expense be deemed of sufficient importance to construct a permanent aqueduct at this point, of a substantial character, such as are now constructed along the main line, with stone piers and abutments, eighteen thousand dollars (\$18,000) will be required. If rebuilt upon its present plan, it will require eleven thousand dollars (\$11,000).

Lock number eleven, north of Dover, of seven and a half feet lift, will be among the number requiring to be rebuilt during the coming year, at an expense of seven thousand dollars (\$7,000).

Repairs have been made upon the Sugar Creek dam, the past season, at an expense of twelve hundred dollars (\$1,200). Lock number sixteen, in the town of Trenton, will require to be rebuilt the coming season, at an expense of eight thousand dollars (\$8,000). Extensive repairs were made, before the opening of navigation in the spring, on the aqueduct across the Wallhonding River, near Roscoe, amounting to twelve hundred dollars (\$1,200), and also upon the locks, and removing bars and deposits in the canal between Black Hand, in Licking county, and Lockville, the lower

termination of this division, amounting to thirty-four hundred dollars (\$3,400.)

A breach occurred, during the spring, in the Raccoon Fork of the Licking, requiring an expenditure of fifteen hundred dollars (\$1,500), in order to place the banks in a condition to resist the constant encroachment of the stream. Owing to the small amount of water received from this source during the past season, and the shortness of the level depending upon it for supply, the expenditure was deemed too great to warrant its repair. A temporary dam was thrown across the mouth of the feeder, entering the canal. Should this feeder be deemed of importance for the future supply of the canal, an expenditure of fifteen hundred dollars (\$1,500) will be required in its repair.

There will be required one thousand dollars (\$1,000) in repairing the banks between the old and the new Licking Summit Reservoirs, the next season.

Repairs have been made upon the Licking Summit Reservoirs during the past season, and all the most important deposits and obstructions have been removed.

A six and a half foot lift lock, at Lockville, will require rebuilding the coming season, which will require an expenditure of nine thousand dollars (\$9,000); an amount greater than other locks of higher lift, owing to the great distance the stone have to be boated.

The ordinary repairs, pay of superintendents, lock-tenders, laborers, and the purchase of materials, will require an appropriation, on this division, of forty-eight thousand dollars (\$48,000).

An annually increasing demand is made upon our repair fund, growing out of the necessity of cutting and removing large quantities of grass from the canal. The rapidity with which this grows from the bottom of the canal, and reaching the surface of the water, requires the entire attention of the forces of many of our superintendents, during the hottest of the summer months, when the demand for labor is at its greatest height, and in order to secure the requisite force, additional wages have to be paid. The great quantity thus accumulating forms not only a serious impediment to the passage of boats, frequently requiring double the number of horses to make the slowest progress, but prevents the flow of water from one level to another, and not unfrequently making a variation of more than a foot in the height of water in the same level, thus preventing mills from

running that would, if the flow of water was uninterrupted from one level to another, have an abundance to supply their demands.

The contractors on this division for the keeping in repair the canal, having been deprived of their contracts by a recent decision of the Supreme Court, availed themselves of the benefit of the ninth section of the act of April 15, 1857, making appropriations for the Public Works of this State, which authorizes the Board of Public Works to appoint appraisers to appraise the tools, boats and materials belonging to the contractors. On the award of appraisers thus appointed, at the request of the contractors, there was paid to Doyle & Miller, contractors on Section Two, two thousand and thirty-two dollars and sixty-four cents, (\$2,032 64,) and to A. Medbery & Co., contractors on Section One, five thousand nine hundred and ninety-four dollars and sixty-four cents, (\$5,994 64,) both amounts being paid from the superintendent's repair fund.

There has been paid on Division Number One, during the year ending November 15, 1858, as follows:

On the Northern Division of the Miami and Erie Canal—

By check of A. G. Conover, Commissioner in charge from Nov. 15, 1857, to April 13, 1858—

For Superintendence and Repairs	\$5,372 89	
“ Building Tumble at Maumee City	1,300 00	
“ “ Tumble and Waste weir at Six-Mile Reservoir.....	2,377 45	
“ “ Crib at Independence Dam	1,000 00	
“ Engineers' Salaries.....	457 50	
“ Special Superintendence, Attorneys' fees and Incidentals.....	301 91	
		<hr/>
		\$10,809 75

And by check of A. L. Backus, Commissioner in charge, from April 13 to Nov. 15, 1858—

For Superintendence and Repairs	\$14,180 94	
“ Building Crib at Independence Dam	833 33	
“ Engineers' Salaries.....	1,104 16	
“ Special Superintendence, Attorneys' fees and Incidentals.....	143 91	
		<hr/>
		\$16,262 34
		<hr/>
		\$27,072 09

On the Northern Division of the Ohio Canal—

By check of A. Blickensderfer, Jr., Commissioner in charge, (from Cleveland to Licking Dam,) from Nov. 15, 1857, to Feb. 15, 1858—

For Superintendence and Repairs	\$3,747 11	
“ Rebuilding Yellow Creek and Little Cuyahoga		
Feeder Dams	433 37	
“ Engineers’ Salaries	375 00	
“ Special Superintendenc, Attorneys’ fees and In-		
cidentals	258 00	
“ Award by Board Public Works	75 85	\$4,889 33

By check on John Waddle, Commissioner in charge (from Licking Dam to Lockville) from Nov. 15, 1857, to April 13, 1858—

For Superintendence and Repairs 5,546 04

The salaries of Collectors, Inspectors and Weigh Masters are deducted from collections, as provided by law, and the accounts audited by the State Auditor. The Board has no official means of ascertaining the amount of salary and allowances which these officers have received. This information is obtained from the books of the State Auditor.

DIVISION NUMBER TWO.

The repairs on this Division have been unusually heavy on account of the damages by floods in the months of May and June.

Soon after the occurrence of the extensive injuries to the south section of the Ohio Canal and the Hocking Canal, the member of the Board for Division No. Two, took steps to have the Board convened for consultation and action in the extraordinary emergency which had arisen, and which, unforeseen and unexpected, had not been provided for by the General Assembly. The Board met at Columbus on the twenty-second of June, and having given information to the Governor of the extent of the injuries sustained by the Public Works, and of the estimated amount of the deficiency of means to restore navigation, expressed, as the sense of the Board, that the Commissioner in charge should restore navigation as early as practicable, and should apply to that purpose any monies subject to his check.

Under the head of the different works comprising the Division, a statement is given, in detail, of the injuries to the works, and also the amount of payments made during the year by check of the Acting Commissioner.

There has been drawn on the Auditor of State, over and above appropriations, checks to the following amounts:

On Section Number Three.....	\$21,630 45
" Hocking Canal	276 44
Total	<u>\$21 906 89</u>

A part of these checks have been paid at the Treasury, the remaining part being at this date unpaid, and an appropriation of the aggregate amount of them is necessary, before the outstanding checks can be paid, and the accounts of the Division balanced at the Treasury.

The unforeseen emergency, caused by the extraordinary freshets of the spring and summer, made it indispensable that the responsibility of thus providing for the necessary cost of repairing the damage to the Canals, should be assumed by the Commissioner in charge of the Division and the State officers, and no doubt is entertained that the appropriations necessary to satisfy the just claims upon the State, created by those checks, will be promptly made. Relief may be provided against similar responsibility in like emergencies hereafter, by an adequate appropriation for a contingent

and, subject to be drawn by the Governor on the application of the Board, or guarded in such other way as the General Assembly may deem proper.

The appropriation of seven thousand five hundred dollars, "to complete the Lancaster Side Cut," has been drawn by the check of the acting Commissioner, and paid by the State Auditor, for superintendence and repairs on the Hocking Canal.

OHIO CANAL FROM LOWER LOCK IN LOCKVILLE, TO PORTSMOUTH.

This part of the Ohio Canal constituted Section Number Three, in the division made by the Board for the purpose of adopting the system of keeping the Public Works in repair by contract.

Navigation was continued through the spring without interruption or difficulty, up to the fifteenth of May, when the water was drawn off for making the annual repairs. The business of this section, being mostly of a local character, is usually more active during the months of March and April than at a later period, and for this reason, the latter part of May was chosen for doing the ordinary spring work, and rebuilding the lock at Waverly and guard lock at Lockbourne.

On the seventeenth of April, the Supreme Court decided the contracts made in November, 1855, for keeping the Public Works in repair, to be unconstitutional and void; and although the legality of the contract for repairs on Section Number Three had not been questioned, the Board were advised that the principles settled by the decision of the Court would apply to that contract, and should govern the Board in its subsequent action in relation to Section Number Three. The Board accordingly, on the twenty-ninth of April, directed the Acting Commissioner in charge, to close the accounts of the contractors, and thereafter to make the repairs by the usual agencies of superintendents and workmen. Under this direction, the contractors' accounts were closed on the first of May, and they were paid their contract price up to that date. The tools, boats and materials, provided for the repair of the Section, were purchased by the State, and paid for—the prices being fixed by appraisers appointed by the member of the Board in charge of the work.

The contractors had placed under sub-contract the rebuilding of the lock at Waverly and the guard lock at the head of Big Bottom; the work to be done at the time of the suspension of navigation for spring repair; and had also made arrangements for rebuilding, at the same time, the guard

lock at Lockbourne. For each of these locks materials had been prepared, and as the old structures at Waverly and Lockbourne were unsafe, no postponement of the work of rebuilding them could be made. Arrangements were therefore entered into with the sub-contractor, for rebuilding, under his contract, Lock No. 44, and the work of rebuilding the guard lock at Lockbourne was placed under the immediate direction of a State Superintendent. Both of these works are completed. The lock at Waverly, (No. 44,) being twelve feet lift, contains 2,294 perches of masonry, and was rebuilt at a cost of nine thousand four hundred and seventy-one dollars and thirty-three cents, (\$9,471 33.) The rebuilding of the guard lock at Lockbourne, cost three thousand five hundred and fourteen dollars and thirty-nine cents, (\$3,514 39.) The work of rebuilding the guard lock at head of Big Bottom has been postponed until next season, when it will probably require attention, and the materials which have been prepared and purchased for it can be made available.

The following statement exhibits the amount paid for the present fiscal year, under the contract, together with the payments made on account of tools, boats and materials, and for rebuilding lock number forty-four and guard lock at Lockbourne:

Paid for 6½ months' keeping Sec. 3 in repair, under contract, at	
\$37,700 per annum.....	\$20,420 86
Paid for boats' tools and materials, as appraised.....	5,646 51
Value of materials for rebuilding Guard Lock at head of Big Bottom	1,347 43
Cost of rebuilding Lock No. 44, south of Licking Summit.....	9,471 33
“ “ Guard Lock at Lockbourne.....	3,514 39
<hr/>	
Total.....	\$40,400 52
<hr/>	

The appropriations made by the General Assembly for keeping in repair section number three, for the fiscal year ending November 15, 1857, amounted to thirty-seven thousand seven hundred dollars (\$37,700), being two thousand seven hundred dollars fifty-two cents (\$2,700 52) less than the sums paid to the contractors, previous to, and at the closing of, their contract, and the cost of new work, which they had partially prepared for, and the prosecution of which could not safely be delayed. There was also an account of eleven hundred ninety-nine dollars and seventy-six cents (\$1,199 76) due the contractors for work done after the first of May, and

for materials and work, not included in their contract, which, added to the foregoing, would make the total deficiency three thousand nine hundred dollars and thirty-two cents (\$3,900 32), and no provision made for the clearing out of canal, or for any of the ordinary expenses connected with maintaining navigation through the remainder of the year. This was the state of the accounts of this section at the fifteenth of May, the time which had been fixed for the withdrawal of the water and the commencement of the spring repairs; but, inasmuch as the condition of the canal imperatively required that repairs should be made, it was determined to draw off the water, and proceed with such work as could not prudently be delayed. The water was accordingly drawn off and work commenced, but in a very few days rains set in, which produced a greater and, to this part of the Public Works, a more disastrous rise in the streams than has occurred since the building of the canals. About the twenty-fifth of May, the Scioto, between Chillicothe and Portsmouth, and all of the tributaries which it receives below Chillicothe, rose to a height greater even than the great floods of 1832 and 1847.

The waters of Paint Creek broke over a guard bank, a short distance above the canal aqueduct, finding a channel in the pits, from which materials had been excavated for building the canal, and making extensive washes and abrasions of the berme bank.

The south abutment and northermost pier of Paint Creek aqueduct were underwashed and partly thrown down; the south end of the heavy arch and truss work which supports the aqueduct falling some twelve feet, and resting on the ruins of the abutment, and the rest of the wooden structure being only held from falling by wooden trestles, which fortunately had been placed by the side of the piers to relieve, to some extent, the shattered and decayed masonry on which the superstructure rested.

At Tomlinson's dam (six miles south of Chillicothe), the frame bulk-heads, through which water was passed from the pool of the dam into the canal, was washed outward into the river by the sudden rise of Stoney Creek; the culvert for which proving too small, the stream broke through the berme bank and discharged its waters into the canal.

Another breach occurred on the same level, a short distance above the guard lock, where about eighty feet in length of the towing-path was washed out.

Two miles above Sharonville, a breach, seventy feet long, was made in the towing-path bank.

At Waverly, the lower end of Crooked Creek culvert was undermined and seriously injured, and it was only by active exertion, and abundant stone being at hand, that the culvert was saved.

The canal, near Pee Pee Creek, has been subject to damages, from floods ever since its construction, and the banks, since the high floods of 1847, had been raised to such height, and protected in such manner, as it was believed would effectually secure them from further injury, but the extreme rise of this year has shown the insufficiency of the means taken for securing them, and extensive breaches were made, both in the towing-path and berme banks; over seven thousand cubic yards of earth were washed out.

The towing-path at Jasper basin was broken in two places, and several smaller breaches and washes occurred on the same level.

Preparations were immediately made for repairing the damages and work commenced; but long before the repairs south of Chillicothe could be completed, another flood occurred, less destructive than the previous one, but doing considerable damage to a part of the canal which had before escaped injury. On the twelfth of June, two breaches occurred on the Winchester level; Walnut Creek breaking through the berme bank below the guard lock, and the waters breaking out of the canal through the towing path banks near Waterloo. Several heavy bars were deposited in the canal, the removals of which and the repair of the banks required about twelve days. The same day, two breaches, very similar to those on Winchester level, were made in the banks of the Circleville level—Walnut Creek breaking into the canal through the berme bank, near the guard lock, below Millport, and breaking out through the towing-path bank, about one and a half miles below, leaving heavy bars in the channel of canal.

The work of repairing the damages to the canal was prosecuted as actively as possible, and, about the first of August, navigation was fully restored, the aqueduct at Paint Creek having been placed on wooden trestles.

At the time of reopening navigation much work remained to be done to repair more substantially and thoroughly the injuries which had been done by the floods, and to put the canal in a condition of safety for the following winter. The trestles at Paint Creek, although strong, are liable to be removed, or thrown down by an accumulation of drift wood against

them, or by the washing out of their foundations. The dam at Tomlinson's has become decayed and unsafe, and a portion of it needs rebuilding. Several culverts, the foundation of which had been injured, required stone and brush protection. Besides, there were many other points where damages had been done, and where the necessity was clearly indicated of precautionary measures to prevent or check further injuries. The aqueducts, the dams and the culverts being most important, arrangements were made for securing the safety of them without delay. Proposals were invited for the rebuilding of the masonry at Paint Creek aqueduct, and the work assigned and placed under contract. Timber was purchased for rebuilding part of the dam at Tomlinson's, and stone engaged for protecting the foundation of the culverts.

The foundation of the lower end of the large double culvert at Sunfish Creek, which had been undermined by the rise of the stream in May, gave way on the twenty-second of August, throwing down some twenty-five feet of the arches, and making a large breach through the towing-path. The two stone arches, each of forty feet span, had become considerably decayed, but would doubtless have stood for some years had not the foundation failed.

A substantial wooden aqueduct, of two spans, each forty-eight feet long, was built at a cost of seventeen hundred seventy-six dollars and eighty-four cents (\$1,776 84). This structure will last many years, and it is probable that the wooden trunks will hereafter be maintained as a permanent substitute for the stone arches: navigation was suspended on account of this breach for four weeks. The principal part of the stone for the new abutment and piers at Paint Creek had been delivered and prepared, and the work bid fair to be well secured before the setting in of winter, when it became necessary to suspend it and all other work for want of means to make further payments. This suspension could not, under the circumstances, be avoided, but it is feared it may prove unfortunate to the interests of the State. The aqueduct at Paint Creek, the dam at Tomlinson's, and some of the large culverts are left in a condition exposed to danger that may result in serious disaster.

A small culvert, two miles below Winchester, gave way during the season of navigation; it was temporarily repaired, and will require more permanent repair in the spring. The timbers in Circleville aqueduct are considerably decayed, and that structure will soon require extensive repairs.

The trunks of the aqueduct at Paint Creek and Brush Creek will require rebuilding during this year, and provision has been made for part of the materials. Repairs will also be required at Yellow Bud aqueduct.

The wooden cribs, built in 1847, to supply the place of the stone tumble, and part of the stone wall of lock number 46, south of Licking summit, have become decayed and dangerous. They should be removed in the spring and the lock restored to its original condition, by the building of stone masonry in the place of the cribs.

Lock number 32, at Circleville aqueduct, is considerably broken and decayed, on account of the inferior quality of the stone of which it was built. It is believed that it can be made to last for a year or two longer, but provision should soon be made for rebuilding it.

The General Assembly, at their last session, passed a resolution directing the making of examinations and surveys with a view of determining the cost of raising the State dam near Circleville, and building a lock of small lift near Yellow Bud. The action of the Board under the resolution will be the subject of a special report, and will be communicated to the General Assembly at their approaching session.

The past year has accumulated evidence of the necessity for the making of these improvements, or adopting some other effectual method by which a more perfect navigation can be maintained between the State dam near Circleville and the dam at Tomlinson's. The supply of water failed on the fifteenth of August, and for several weeks after that time boats could not pass over that section of canal with more than one half of the usual load. The difficulty is each year increasing, and the south division of the Ohio Canal can only be rendered reliable and useful by securing a more abundant supply of water to the levels immediately above and below Chillicothe.

The Portsmouth Bridge Company have nearly completed their suspension bridge over the Scioto, at the outlet of the canal, at Portsmouth, and before the opening of navigation for the next season, will have it in readiness for use. The building of this bridge will be of great advantage to the Canal, in affording at all times a convenient and safe means of passing boats, teams, and in carrying freights to and from the Canal, when the Ohio River is at a low stage. In almost every year, there have been times when boats could not pass into or out of the canal, and the cargoes have of late years been usually transferred by a short drayage between the side cut

of the Portsmouth Dry Dock and Steamboat Basin Company and the Ohio River at the warehouse, a short distance below the mouth of the Scioto. On account of the better facilities offered by the new bridge for carrying cargoes to the Ohio at the Portsmouth landing, the discharging and receiving of canal freights will hereafter, at times of low water, be mostly done at the locks near the terminus of the canal, and increased room will be required there, for the harborage of boats receiving and discharging cargoes. It is recommended that money be appropriated and the Board authorized to construct a basin between locks No. 53 and 54, to afford facilities and room for conveniently accommodating the anticipated business.

The law of April 12, 1858, makes provision for the payment of salaries for Inspectors at Zanesville and Portsmouth, but the Inspector's office at those places having been abolished by previous action of the Board, and the member, whose right it was under the law, to make appointments of officers for the places, believing that the public interest did not require the recreating of the offices, no appointments were made.

The business at Waverly has become quite important, and as it is twenty-one miles distant from the nearest Collector's office, the convenience of its business men and the interests of the revenue require the establishment of a Collector's office at that point.

The contract for rebuilding masonry at Paint Creek aqueduct includes work that is estimated to cost, at contract prices, eleven thousand three hundred dollars (\$11,300), of which there has been paid on estimates for work done, two thousand eight hundred fifty-one dollars and eleven cents (\$2,851 11), leaving eight thousand four hundred forty-eight dollars and eighty-nine cents (\$8,448 89) as the value of work under contract remaining to be executed.

An arrangement has been made for the rebuilding of the guard bank above the Paint Creek aqueduct; the new bank to be higher and stronger than the one broken and destroyed by the flood of May last. The bank is being built by the owner of the land on which it is to stand, and in consideration of its serving to protect his farm from the effects of high waters, he agrees to perform the work on receiving from the State one-half of the estimated value. There will be about 13,000 cubic yards in the bank, and the cost to the State, at the contract price, is estimated to be eight hundred and twelve dollars (\$812), of which one hundred and forty dollars

(\$140) have been paid for work done, leaving six hundred and seventy-two dollars (\$672) yet to be paid on the work as it progresses.

BASIN ON OLD PENITENTIARY LOT IN COLUMBUS.

There has been paid during the year, by check of John Waddle, drawn on the fund appropriated for the construction of this work the sum of five dollars, being for engineering services performed previous to the placing of the work under contract, in 1857. This payment is included in the statement of payments during the year, on section number three. The want of room in the canal at Columbus, is so much felt, and the new basin so necessary to the convenient transaction of the business of the canal, that the cost of completing it is included in the estimates for work to be done this year, and the attention of the General Assembly is again directed to the subject. There has now been expended on the basin seven hundred and sixteen dollars and forty-five cents (\$716 45) and two hundred and eighty three dollars and fifty-five cents (\$283 55) of the former appropriation remains unexpended, and an additional appropriation of seven hundred and fifty dollars (\$750,) is asked.

The following payments have been made on section number three by check drawn by John Waddle on the Auditor of State during the fiscal year ending November 15, 1858:

For Awards of Damages.....	\$442 00
For Superintendence and Repairs.....	72,645 74
For Engineer's Salaries	1,875 00
For Special Superintendence Attorney's Fees and Incidentals	1,477 45
For Canal Ferriage at Portsmouth.....	750 00
For work on Canal Basin at Old Penitentiary Lot in Columbus	5 00
For Awards of Board of Public Works.....	1,018 15
	<hr/>
	\$78,213 34
	<hr/>

All of the above sums paid for awards of damages and for work on canal basin on old Penitentiary lot; three thousand one hundred and forty one dollars and seventy-one cents, (\$3,141 71) of the sum paid for superintendence and repairs; three hundred and seventy-five dollars (\$375) for engineers salaries; two hundred and eighty dollars (\$280) for special superintendence, Attorney's fees and incidents, and one hundred and fifty dollars (\$150) for canal ferriage at Portsmouth, were for work done pre-

vious to Nov. 15, 1857, but the payments for which were made after that date; they should have been included in the accounts for 1857. The amount paid for awards of Board of Public Works was also for work done in 1857, those sums deducted from the aggregate of payments made during the year would leave seventy-two thousand eight hundred and one dollars and forty eight cents (\$72,801 48) as the cost of keeping section number three in repair for the fiscal year 1858.

The following is an estimate of the sums required for keeping in repair section number three for the year ending Nov. 15, 1859, and constructing such new work as is necessary for the safety and convenient use of the canal.

For General Superintendence and Repairs.....	\$34,000 00
For Ferriage or Bridge Toll at Portsmouth	600 00
For work at Paint Creek Aqueduct, exclusive of Masonry.....	2,000 00
For re-building part of Tomlinson's Dam.....	1,200 00
For re-building Masonry at Paint Creek Aqueduct.....	8,500 00
For " " of Locks.....	11,000 00
For completing Basin on Old Penitentiary Lot in Columbus	750 00
For building Guard Bank above Paint Creek Aqueduct	700 00
For building Basin between Locks No. 53 and 54 near Portsmouth...	3,000 00
	<hr/>
	\$61,750 00

This sum is additional to the amount stated as having been drawn for on section number three, in the year 1858, over and above appropriations.

HOCKING CANAL.

The heavy rains which fell in the early part of the season of navigation carried into this canal at the old summit, on Lancaster Side-Cut, large quantities of sand and mud, depositing it on the canal bottom for near one half mile in length, and in depth, varying from one to four feet. On account of the material through which the canal is here constructed being disposed to slide, the water cannot safely be drawn off from the level, and the accumulation of mud and sand could only be removed from the canal channel by the tedious and expensive process of excavating from below water by hand. The deposits which so frequently obstruct the navigation at this point are carried into the canal by two small streams, the waters of which were formerly needed for feeders to the Summit level, between Carroll and Lancaster. Since the cutting down of the summit, in the year

1841, by which a continuous level, drawing its supply of water from the Ohio Canal, was made to extend from the Ohio Canal to Lancaster, no necessity has existed for these feeders on the old summit, and the streams should now be diverted from the canal. In rainy seasons they throw into the canal large quantities of water, endangering its safety, and large deposits of earth, filling up its channel, and in dry seasons they afford no appreciable addition to the water needed for navigation. By diverting them from the canal a large expenditure, which is annually required to remove deposits, would be saved the State, and the vexatious and injurious interruptions of navigation on the canal avoided. The east abutment of Monday Creek Aqueduct, last year placed under contract, was rebuilt this year at the time of suspension of navigation in the spring. The new work is substantially done, of good material, contains three hundred and twenty-three cubic yards of cut stone masonry, and cost twenty-four hundred and sixteen dollars and seventy-six cents, (\$2,416 76), including the removal of the old masonry, the excavation and the embankment, and the expense of temporary trestles to support the aqueduct while the work was being done.

At Sharp's dam a permanent and reliable stone culvert of ten feet chord, with wooden feed gates, has been completed in the place of the old wood bulk head. The expenses connected with building it amounted to sixteen hundred and forty-three dollars and fifty cents. (\$1,643.50). No decision has yet been made in the case before the Common Pleas Court of Fairfield county, which is to determine whether the State is under obligations to maintain this work for the purpose of supplying water to the mill directly below. The counsel for the State expresses the opinion that the case will be tried at the next term of the court.

Early in May, the first interruption to navigation occurred on the level between Carroll and Lancaster, occasioned by a leak through a culvert at Lancaster, and by the filling up of the canal channel with earth, carried in by the *feeders* at the summit. The leak through the culvert was repaired and the bar at the summit so far removed as to open navigation for a few days previous to the sixteenth of May, at which time the water was withdrawn from the other levels and the clearing out and other necessary spring repairs commenced. These repairs were advanced as rapidly as the very rainy weather would permit, and were nearly completed, when the unprecedented flood of June eleventh devastated all that part of the canal below

Sugar Grove. Hocking River rose higher than it had risen since the building of the canal, and swept over and through embankments which were considered sufficiently high and strong to withstand any floods.

Scarcely a level escaped breaches, and on many of them the banks were broken at several places, as the following statement of casualties will show.

About three miles below Sugar Grove, a breach was made through the towing path directly below the lock, the water flowing in the channel of the canal, washing the banks badly at one or two points, to the head of the next lock below, where it broke out, making two breaches through the towing path. On the next level below, a breach was made through the towing path, a short distance above Green's mill. The bridge over Crockett Run was swept off, and the towing path on the slackwater, from the outlet lock at Green's to the falls, badly washed and covered with drift wood, and the road and towing path bridge at Harper's Run carried away.

The greatest amount of damage done to the canal at any one place was at Hocking Falls, where extensive breaches were made through the towing path bank, above the guard lock, and a part of the discharged water broke into the canal at the side of the lock, doing serious damage, and the residue forced an outlet by washing away a short guard bank below, and making a large breach across the canal through both of the banks. Several smaller breaches occurred on Logan level.

The second level below Logan had a breach through the towing path, a short distance below the lock at the head of the level; another at the waste-weir at Three Mile Run, and several smaller ones in the neighborhood of Pattonville.

A short distance below the lock at head of the first level above Nelsonville, a breach was made through the towing path bank, which resulted in a large wash of the inner slope of the towing path bank, above the lock next below, and a breach around the tumble walls of the lock. Near Nelsonville, the water broke through the berme bank at several places, making small breaches.

On the level next below Nelsonville, there was a breach through the berme bank, and a large amount of earth was washed from the towing path at a point where an opening had been made for the discharge of water from the canal while the masonry at the aqueduct was being rebuilt.

Chauncey level was very badly washed; two large breaches being made in the towing path, and a number of smaller ones through the berme bank.

On the level below Chauncey, a large breach was made through the high guard towing path bank, about one thousand feet below the guard lock, and another breach through the towing path near the lower end of the level.

The towing path bridge over the Hocking river, at Ballard's Salt Works, was swept off.

On the Athens level two breaches occurred; one into the canal, at a waste weir, and the other out of the canal, near its terminus, at Athens.

The dam at "McCann's Mill" was injured, and sixty feet of its length settled down about three feet, requiring to be rebuilt and refilled and protected. Nelsonville dam was underwashed and badly damaged; sixty feet in length of it having settled, and the south abutment being badly inclined. It continued to settle rapidly after the flood, and has been rebuilt, as has been also the abutment. Chauncey and Athens dams were also injured, and required and received repairs to the structures and graveling above them.

In addition to the injuries thus specifically mentioned, the canal banks were generally badly washed and large deposits made at many places in the canal and slack water pools.

Heavy deposits were left in the pool directly below Sugar Grove, and also in the canal, at the Summit between Lancaster and Carroll; navigation at both these points was obstructed and a large amount of labor was necessary before boats could be passed.

The canal was restored, so far as to permit navigation to be resumed between the coal mines, at Nelsonville, and the Ohio canal, at Carroll, by the last of July, and between Nelsonville and Chauncey, by the tenth of August. From Chauncey to Athens the canal was not opened until September.

The towing path bridge over the Hocking river has not been rebuilt. Some of the citizens of Athens and neighborhood are anxious that a location should be adopted for it at a point about one half mile below where the old bridge stood, and that the State should unite with them in building a bridge that will answer for the purpose of common travel, as well as the uses of a towing path. Whether this project be matured and adopted or not, it may prove good policy to adopt the location which has been referred to, as by doing so the towing path for a considerable distance would be

improved and the expense of keeping it in repair lessened. The bridge should be rebuilt in the spring.

Notwithstanding the season of navigation was so much shortened by the disasters to which the extreme flood of June subjected this canal, its revenue has been but slightly reduced from that of the preceding year. The importance of this work in supplying coal and salt to the southern portion of the State cannot be correctly estimated, and the demand for these articles rapidly increasing with the growth of population and extensions of manufactures, it is but reasonable to anticipate a steady increase in the tonnage and tolls of the canal.

Subsequent to the floods of June 11th, an unprecedented rise in Crockett's Run, a small stream emptying into the Hocking six miles above Logan, made a breach through the canal bank and washed a large amount of earth into the canal below Green's lock.

There has been paid on this work during the year ending November 15, 1858, by checks of John Waddle the following sums:

For Awards of Damages.....	\$261 00
“ Special Superintendence, Attorneys' Fees and Incidentals	408 03
“ Rebuilding Bulk Head at Sharp's Dam.....	1,493 50
“ Construction, Superintendence and Repairs.....	23,289 51
“ Engineers' Salaries.....	437 50
	<hr/>
	<u>\$25,887 54</u>

All of the foregoing amounts paid for awards of damages; fifty-seven dollars and twenty-eight cents (\$57 28) for superintendence, attorneys' fees and incidentals; nine hundred and ninety-four dollars and twelve cents (\$994 12) for bulk head at Sharp's dam, and thirteen hundred and three dollars and twenty cents (\$1,303 20) for construction, superintendence and repairs, were for work done and awards made previous to November 15, 1857, and should have been included in the account for that year. The aggregate for these sums is twenty-six hundred and fifteen dollars and sixty cents, (\$2,615 60,) which, deducted from the aggregate of payments, would leave as the expenditure on the Hocking canal for the year ending November 15, 1858, the sum of twenty-three thousand two hundred seventy-one dollars and ninety-four cents, (\$23,271 94.)

The following is an estimate of the amounts required for keeping in repair the Hocking canal for the fiscal year ending November 15, 1859.

For Superintendence and Repairs	\$12,500 00
“ Rebuilding towing path bridge over Hocking River.....	1,200 00
<hr/>	
Aggregate.....	<u><u>\$13,700 00</u></u>

The aggregate does not include the amount drawn during the year ending November 15, 1858, over the amount of appropriations.

MUSKINGUM IMPROVEMENT.

This work has, to some extent, suffered from the floods which occurred last spring in the south-eastern part of the State. Navigation has, however, been kept up through the entire season; the most serious casualties which the Improvement has sustained being the washing away of the lower part of the west end of the dam at Zanesville, and the settling of the dam at Lake Chute. Unusually large deposits of mud and gravel were made in the lock and channel, occasioned by the extraordinary washing and wearing of the river banks in the floods of May and June. To remove the most troublesome of these bars a contract was entered into with a company at Pittsburgh to bring on to the Improvement a dredging machine and to keep the same in operation for one month, in removing deposits and clearing out the channel. The work was satisfactorily performed, thereby much improving navigation, and a subsequent arrangement was made by which the machine was continued at work for some two weeks longer.

At Dresden a small expenditure of twenty-one dollars and thirty-seven cents was made in removing by hand labor a bar which had formed below the lock which connects the Improvement with the Ohio canal.

Timber was provided at Symmes' Creek for a new sett of lock gates. The amount expended at this point, including lock-tender's wages, was three hundred fifty-two dollars and eleven cents. About one hundred and fifty feet of the dam at Zanesville was rebuilt—being all of the old part of the dam. The new work was made to conform, as nearly as practicable, to the plan of that part of the dam which had before been rebuilt, and by next year renewing the top of the older section of the dam, the entire structure will be rendered reliable for many years. The masonry of the west abutment received some damage from the flood that injured the dam and has been repaired; the cleaning out of the deposits in the large cul-

vert under the canal, near the locks, has caused considerable expense. In the canal, piles have been driven, protection replaced and draw-bridge repaired.

In the expenditures at this place, which amount to seven thousand two hundred seventy-seven dollars and thirty-six cents; (\$7,277 36) are included wages of superintendents, purchase of tools and various matters which would be more properly charged to account of general expenses.

At Taylorsville, a new guard-crib was built above the guard-gates, the dam graveled and a large number of piles driven in the canal to support plank placed behind them for preventing the wash from the banks entering the canal. Dredging was also done by the machine and by hand. The cost was eleven hundred ninety dollars eighty-three cents, (\$1,190 83.)

Rokeby dam was leveled up and repaired, piles driven at the head of the lock, the lock-gates repaired and heavy bars removed by dredging, from above and below the lock. The expenditures were four hundred and ninety-eight dollars and seventy-one cents, (\$498 71.)

At McConnellsville, a new pair of lock-gates was built and put in, the culvert conveying water to lower mill repaired and some clearing out of canal done. The entrance to the canal has been protected and some piles driven. The expenses amounted at this point to eleven hundred fifty-four dollars and ninety-five cents, (\$1,154 95.)

The lower mitre sill at Winsor lock has caused considerable difficulty from having broken the fastenings which held it to the foundation, opening a heavy leak between it and the lock floor. It has been forced down to its place and again fastened as securely as the soft and shattered wood of the timbers beneath it would admit of. About fifty feet of apron was restored to the dam, and the dam leveled up and repaired. Dredging was also done above and below the lock. The expenses at Winsor were one thousand twenty-five dollars and sixty cents, (\$1,025 60.)

As has been previously stated, the dam at Lake Chute was settled in part of its length by the flood which injured the Zanesville dam. Some years since extensive breaches were made through and around the dam, and in repairing one of the breaches a part of the dam was built on a tree foundation in great depth of water. This part has since been liable to settle, and last summer sunk at one point to about four feet below its proper height. It was repaired by taking down the sunken part and rebuilding it of such form as would be most likely to prevent the water

passing over it from further effecting the foundation. The dam has been thoroughly graveled and is now believed to be secure. The sum of twelve hundred and ninety-five dollars and sixty-seven cents (\$1,295 67) has been expended at this point.

At Beverly the dam has been graveled and repaired, piles driven and repairs made to protection walls and to culvert conveying water past the lock to the mills. The expenditures amounted to thirteen hundred and thirty-one dollars and eighty-two cents, (\$1,331 82.)

Navigation at Lowell is badly obstructed in low water by the mud deposits which have accumulated in the canal. Some of the accumulation has been removed by dredging, but a more effective clearing out is required. The dam has been graveled and put in general repair and a crib built next to the east abutment, to protect it from further decay. The expenditures were thirteen hundred and ninety-five dollars and thirteen cents, (\$1,395 13.)

The dredge boat was used for a short time near the dam at Devols. The amount spent at the lock and dam was three hundred and nine dollars seventy-four cents, (\$309 74.)

At Harmar a crib has been built at the east end of the dam, the dam repaired and a number of plank replaced on the floor of the locks. The expense was seven hundred seventy-one dollars and seventy-seven cents, (\$771 77.)

Soon after the decision of the Supreme Court in regard to the validity of the contracts for keeping the Public Works in repair, the Board ordered that the arrangements, then existing between the contractors and the State, should be terminated, and the repairs placed under the charge of superintendents of repairs, appointed as the law prescribes. It became necessary for the State to purchase boats, tools, etc., for making the repairs, and under the law for 1857, the Board purchased, at the valuation of three appraisers, appointed by the member in charge, the boats, tools and materials prepared by the contractors for keeping in repair the section, amounting to two thousand four hundred and forty dollars and ninety-seven cents (\$2,440 97.)

The walls of the locks at McConnellsville, Beverly and Harmar leak badly and parts of some of them are so broken and crowded over that the rebuilding of them will soon be necessary.

At Harmar, there has long been a necessity for means of passing boats to and from the Improvement and the Ohio River when the water in the Muskingum is low and the Ohio in boatable condition; the foundation of the present outlet lock being too high to pass boats when the Muskingum is at low water. A foundation for a new lock, below the present one, was laid about four years since, and some work has since been done by the Marietta & Cincinnati Railroad Company, in connection with their bridge masonry, that would form part of the lock wall. The attention of the General Assembly is respectfully called to the propriety of completing this lock and of opening, or causing to be opened, a direct channel from the foot of the lock to the low water channel of the Ohio River.

Under the resolution of the General Assembly, relative to building a crib from the McConnellsville dam, in Morgan county, to the Malta Mills, no action has been taken other than several attempts to make a settlement of the account of rents due the State from the lessees of the water power. The efforts at settlement have not been successful, and as the resolution forbids that any expenditure should be made until the rents due in equity should be paid, or secured to be paid, no steps have been taken for the rebuilding of the crib. The accounts between the State and the lessees have heretofore been the subject of litigation before the courts, and with the present views and feelings of the lessees there is no probability of an amicable adjustment of the matter in dispute.

Payments have been made on the Muskingum Improvement during the year ending Nov. 15, 1858, as follows:

By check of Abner L. Backus—	
For Superintendence and Repairs.....	\$959 70
And by check of John Waddle—	
For Superintendence and Repairs.....	19,532 61
For Special Superintendence, Attorney's Fees and Incidentals.....	72 88
For Salaries of Engineers	1,437 50
Total.....	<u>\$22,002 69</u>

Three hundred and seventy five dollars (\$375) for engineer's salaries, and four hundred and eighty two dollars and twenty-eight cents (\$482 28) included in the foregoing statements, were for work done previous to Nov. 15, 1857, and should have been charged in that account of that year.

These sums, amounting to eight hundred and fifty-seven dollars and

twenty-eight cents (\$857 28), deducted from the aggregate payments, would leave twenty-two thousand one hundred forty-five dollars and forty-one cents (\$22,145 41) as the payments for work done in the year ending Nov. 15, 1858.

There has also been certified as being due on a check issued to Chamberlain & Paul, contractors for keeping in repair Section Number Five, the sum of one hundred forty-eight dollars and seventy-one cents (\$148 71) being a balance stated in the last annual report and due on account of the just and true value of work done by them, between Nov. 15, 1856 and May 1, 1857.

The estimated amount of appropriations necessary for the Muskingum Improvement for the year to end Nov. 15, 1859, is as follows:

For Superintendence and Repairs.....	\$22,000 00
For Rebuilding Masonry	3,000 00
Total.....	<u>\$25,000 00</u>

WALHONDING CANAL.

No casualty has injured this canal, and there has been no suspension of navigation, except for a few days, on some of the levels, when the water was drawn off for removing bars and making other slight repairs. The business has been very light but has improved over the previous year, the revenue showing a considerable proportional increase.

This canal formed part of Section Number One in the division made for the purpose of putting the repairs under contract, and no separate accounts of the expenditures for superintendence and repairs were kept, between Nov. 15, 1855, and May 1, 1858.

There has been paid for superintendence and repairs on this canal, during the year ending Nov. 15, 1858, by checks of John Waddle, the sum of four hundred seventy-eight dollars and fifty-four cents (\$478 54).

An abutment timber crib filled with stone will be required to be rebuilt at each of the two dams next season, and also some other repairs at different points. The amount estimated as necessary for superintendence and repairs for the next year is three thousand dollars (\$3,000).

ENLARGING CULVERTS ON NATIONAL ROAD.

The work provided for by the appropriation of sixteen hundred dollars (\$1,600) was completed previous to the last annual report of the Board, and payments made to the contractors. There has been, in the year ending Nov. 15, 1858, drawn on the fund appropriated for the enlargement of the culverts, the check of John Waddle, for one hundred dollars (\$100), for engineering services connected with this work and the canal basin on old Penitentiary lot at Columbus.

The following Tabular Statement exhibits the names of Resident Engineers, Special Superintendents, Collectors of Tolls, Superintendents of Repairs and Lock Tenders, who have been in the employ of the State on Division Number Two, during the year ending November 15, 1858, and also the salaries, allowances and perquisites paid to each.

* Appointed by Commissioner in charge of Division Number One.

The contractors for repairs on the Muskingum Improvement and on the Ohio Canal continued in charge up to May 1st. None of their employees are included in the foregoing, nor are special superintendents who were paid out of the repair fund by the superintendents of repairs.

The State supplies many of the lock tenders with houses free of rent. Collectors' salaries are fixed by law and are deducted from collections, as provided by law, and the accounts audited with the State Auditor. The Board has no official means of ascertaining the amount of salary, allowance and perquisites which they have received. This information is obtained from the State Auditor's books.

DIVISION NUMBER THREE.

SOUTHERN DIVISION OF THE MIAMI AND ERIE CANAL.

This portion of the Public Works is the southern part of the Miami and Erie Canal, extending from the Ohio River, at Cincinnati, to the south line of the village of Junction, in Paulding county;—one hundred and eighty-one miles of main line and twenty-one miles of feeders, and the Mercer County, Loramie, and Lewistown Reservoirs.

On the 21st November, 1857, the canal was closed by ice from Dayton north, and on the morning of the 26th, the thermometer was 10° below zero, causing a suspension of navigation throughout the entire line, which continued until the 5th December, when the ice disappeared and navigation opened on the southern half of this Division, and continued uninterrupted until the 11th February, at which time another freeze prevented its use until early spring.

The water was let off for repairs on the 26th January, from a point four miles below Piqua, to the feeder next below, at which time one of the walls of lock No. 11, south of Loramie's summit, was rebuilt. From the 28th of January to 15th March, the water was withdrawn from the canal from Acadia north, for the purpose of making the necessary repairs to the wooden locks and cleaning out the canal on this sub-division, and during part of the same time the water was out on the sub-division south of it, for repairing wooden locks and cleaning out the canal and St. Mary's basin, which latter item cost about fifteen hundred dollars (\$1,500); the removal of the mud from the basin, which is in daily use, never having been so thoroughly done since the canal was completed.

For the purpose of making general spring repairs on the southern portion, the water was withdrawn from the feeder, three miles above Piqua, to Cincinnati, on the fifth of June, and remained out about twenty days. During this time, the natural deposit from the water (containing, as it always will, so large a quantity of earthy matter after every heavy rain), and the wash from the slopes of the bluffs, the accumulation of several years, was removed at many points.

The cost of this work at the most expensive places was,—at the three locks and bluffs and four mile level above Dayton, eleven hundred and twenty-five dollars (\$1,125); the removing of the mud from the basin in that city,

nine hundred and fifty dollars (\$950); the sum of twelve hundred and seventy-two dollars and eight cents (\$1,272 08) for widening and deepening the six mile level, below Dayton; removing the heavy bar below the lower Carrollton lock, eight hundred dollars (\$800); cleaning out the Miamisburg and Franklin levels, eleven hundred dollars (\$1,100), and removing bars at Hamilton, five hundred dollars (\$500).

But much the largest expenditure was the cleaning out of the basin and canal, within the limits of the city of Cincinnati. Although a very considerable expense was incurred the year previous, still much the largest part was then left untouched, and was, this season, thoroughly cleaned out and removed, excepting the long basin extending from Tenth to Eighth streets. The deposits were from two to three feet deep outside of the channel, leaving, at many places along the business docks, only from eighteen to twenty-four inches in depth of water, when the canal was full. The removal of the mud from the basin was expensive, it being necessary, first to place it in the streets, on the docks and banks, and afterwards, when navigation was restored, to remove it from two to three miles with boats. This item of expenditure cost the sum of ninety-five hundred dollars (\$9,500), or about sixty cents per cubic yard for the earth removed.

A part of a lock wall in the city of Cincinnati was taken down and rebuilt, at an expense of five hundred and fifty dollars (\$550); the end of a stone culvert, of twenty feet span, on the ninth mile from Cincinnati, (over which an embankment of about twenty-five feet is built), being injured by the floods, was taken down and rebuilt, at an expense of eleven hundred and ten dollars (\$1,110).

Near Hamilton, a stone culvert was rebuilt, at a cost of three thousand eight hundred and fifty dollars (\$3,850).

On the thirty-fourth mile from Cincinnati, a portion of a stone culvert, of eight feet span, was rebuilt, the upper end of which was undermined in 1853; this cost twenty-two hundred and twenty-five dollars (\$2,225)—exceeding the appropriation three hundred and twenty-five dollars (\$325).

The rebuilding of the superstructure of the Loramie Creek aqueduct was completed so far, in April last, as to make it useful, and that which remained to be done was the enclosing of the chords and arches. On this work there is a small balance due.

The rebuilding of lock number eight, north of Loramie summit, substi-

tuting stone for wood, has progressed nearly to completion, and by the time that navigation is opened in the spring, the lock, with the feeder cribs and embankments, will be completed. On this work there has been expended, during the year, eleven thousand dollars (\$11,000): five hundred dollars (\$500) of the appropriation is yet unexpended, and it will require a further appropriation to complete the work.

Head gates to the Mad River feeder have been rebuilt, as also change bridge at Dayton. Twelve pair of lock gates have been removed, and the feeder dams have all been more or less repaired.

On the inner slopes of the east and west banks of the Mercer County Reservoir, a further protection of stone was required, in consequence of a much greater depth of water having been maintained during the past summer, than had formerly been. The cost of this additional protection was about fifteen hundred and fifty dollars (\$1,550), the available head for the season being, on an average, nine feet above the water line in the feeder. The excessive wet spring and frequent heavy rains during the summer, in and about this reservoir, made it necessary to construct a waste weir of sufficient capacity to pass off the surplus water, which flowed into the reservoir, and during the fall, one was built, and so arranged that the water will not exceed its highest mark for the last season. The waste weir cost three hundred and seventy dollars (\$370). This reservoir, the largest in the State, containing an area of over fifteen thousand acres, with its present supply of water properly husbanded, will furnish the sixty miles of canal north of, and dependent on it, with all the water that may be required for two years' navigation, including leakage and evaporation, without additional rains, and still have a surplus for contingencies.

The wooden locks, north of Loramie Summit, received their usual repairs, and at times the expenditure required to put them in order for the business of the season is considerable.

The surplus water passing from the Loramie Reservoir during the early part of this season was so great that the river channel from the weir to the creek, which was constructed the previous season, proved too small, and made it necessary to increase its capacity, so as to prevent the surplus water in time of floods from overflowing the channel and passing too near the bank of the reservoir, on its way from the waste weir to the creek, costing four hundred seventeen dollars and twelve cents (\$417 12.)

The work of constructing the enlargement of the Lewistown Reservoir

remains the same as it was last winter, there being no money expended by the contractors towards its completion, as, by an act of the last legislature, it was expected that the contract would, before this time, have been surrendered to the State. The contractors have drawn water rents on a portion of the leases transferred to them.

A part of the land in the original Lewistown Reservoir has been purchased and a portion is in process of negotiation. Suits of condemnation in other cases, which were commenced in this and the previous year, have not yet been determined. The lands purchased since the assessment by the jury in the cases of condemnation have been at about one-half the price of those condemned and of much better quality. The number of acres purchased is three hundred and seventy-nine, costing two thousand and ninety dollars (\$2,090).

By the act of April 12, 1858, the Board was required to proceed to condemn the lands of Walter Slicer, within the limits of this reservoir, and also to pay said Slicer, as an advancement on his damages, the sum of sixteen hundred dollars (\$1,600), which has been done, and "the bond conditioned on the advancement" was executed by Mr. Slicer, and is now deposited in the office of the Board. The case was submitted to a jury in accordance with the law and the price fixed by them was so much above the estimated value that the case was appealed to the Common Pleas of Logan county and there remains. Mr. Slicer's land is in three tracts; the whole, two hundred and ninety acres.

In September last, after public lettings, a contract was entered into to rebuild two culverts, substituting stone for wood in each case; one with three openings, each seven feet span, at the point where the Mercer County Reservoir Feeder crosses the south branch of the St. Mary's, and the other, of six feet span, under the canal, on the one hundred and seventy-second mile from Cincinnati; both of which will be completed by the first of April next. This work will cost five thousand nine hundred and fifty dollars, (\$5,950.)

On the 12th of June, a general freshet occurred throughout this Division and took place at the time when the water was withdrawn south of Piqua for repairs. The Miami River from Piqua to Dayton was within two and a half feet as high as the great freshet of January 1, 1847; while at Franklin, Middletown and Hamilton, it was four feet below that flood, and the Ohio River submerged the four lower locks in Cincinnati, each

being eleven feet lift. Considering this extreme high water, the canal suffered but little; no breaks of importance occurring during the freshet, nor at any other time during the year. But the Lebanon feeder bank, which is above and contiguous to the canal, near the Middletown feeder, was, on two occasions, while the water was out for repairs, broken by the heavy rains and the earth swept into the canal below.

For safety to the canal, the feeder bank was repaired to prevent the drainage water from a large territory flowing into the canal, and thus causing, during the freshets, serious obstruction to navigation by large deposits of earth. The work of rebuilding this bank and removing the bars cost about five hundred dollars, (\$500,) which should be collected from the owners of the Warren County Canal, as it would seem that they should be liable for the damages the canal sustained by their neglect to take proper care of their property.

Although this was a wet season during the early part, up to the middle of July, yet the Loramie Reservoir and the Miami River, which, in low water, is partly supplied by the unfinished Lewistown Reservoir, were exhausted by the middle of October, and but for seasonable rains and the consequent increase of water afforded by the Miami River, on which so large a portion of the canal is dependent, a want of water would have been severely felt. The completion of the enlargement of the Lewistown Reservoir will ensure, at all times and in all seasons, a full supply for all purposes of navigation on the Summit level and the canal south of it, where the canal has suffered so frequently from want of water. It will be remembered that in 1854 and 1856 this line suffered from an inadequate supply of water, as has been the case before, and the loss to the State the latter season was not far short of seventy thousand dollars in receipts from tolls, besides discredit brought on this canal, in a business point of view, from which it has not fully recovered.

This division is what constituted section No. 7 of the Public Works when the repairs were made by contract, and was superintended by persons who were contractors up to May 1st, but under the decision of the Supreme Court, in April, declaring the contracts for repairs invalid, the Commissioner in charge immediately proceeded to appoint superintendents and have the repairs made under their directions. The boats, tools and materials belonging to the contractors were appraised in accordance with law, and amounted to the sum of ten thousand and sixty-seven dollars and

sixty-five cents, (\$10,067 65,) on which there has been paid eight thousand one hundred and seventeen dollars and sixty-five cents, (\$8,117 65.) On this section there was expended the sum of ninety-two thousand five hundred and fifty-six dollars and forty-nine cents, (\$92,556 49,) for superintendence and repairs, that would have been properly chargeable to that account under the contract. The contract price was one hundred and eighteen thousand dollars, (\$118,000,) per annum; showing the cost of current repairs for the year to be twenty-five thousand four hundred and forty-three dollars and fifty-seven cents, (\$25,443 57,) less than if they had been made at the contract price.

The superstructure of the Miami River Aqueduct will require renewal; the middle span is now in a very unsafe condition. Timber and plank, to the amount of eighteen hundred dollars, (\$1,800,) are being prepared, that it may become seasoned. An appropriation is asked for this work.

There are several wooden locks north of Loramie's Summit which may require rebuilding, and the material should be prepared in the fall and early winter of 1859.

A part of one wall of Lock No. 8, south of Loramie's Summit, will require rebuilding. Many of the stone project into the lock chamber and cannot be kept to their places by the usual mode of wedging, and the masonry is in a very leaky condition.

The Sidney Feeder of the Summit level, and also part of the main line, are so much filled by deposit, that it is deemed important to have a considerable amount of work done to give it proper width and depth, and an early appropriation is asked for superintendence and repairs, that the clearing out may be completed before early navigation in the spring.

Lock No. 40, the upper lock at Lockland, is in a dilapidated condition, and requires rebuilding; the stone having long since been prepared. The condition of this lock was mentioned in the last Annual Report. The condition of the locks in Cincinnati, ten in number, extending from the basin of the river, have not all been in a working order during the season, so that boats could pass into, or from the river, unless for a few days when the latter was sufficiently high to float boats over the two or three lower locks. It was not thought best to expend the sum necessary for keeping the lower locks and levels cleared out, as the small amount received from tolls would be inadequate to meet the great expense. The clearing out will always have to be done after every considerable rise in the river.

There has been paid on this portion of the Public Works during the year ending November 15, 1858, by check of A. G. Conover:

For Superintendence and Repairs.....	*\$82,143 99
“ Repairs under contract previous to November 15, 1855.....	8,274 17
“ Repairs placed under contract during 1857.....	*19,252 50
“ Enlarging Canal below Dayton.....	1,972 08
“ Balance due November 15, 1855, on unsettled accounts for Superintendence and Repairs.....	389 14
“ Engineers’ Salaries.....	1,500 00
“ Special Superintendence, Attorneys’ Fees, and Incidentals	1,481 73
“ Award by the Board of Public Works	252 00
“ Award of Damages.....	350 00
“ Claims found due and settled by the Board of Public Works..	488 83
“ Lands in the Original Lewistown Reservoir, and for expenses pertaining to condemnation and appraisement.....	†3,790 00
Total	<u>\$119,194 44</u>

It is estimated that there will be required for the year ending November 15, 1859, for keeping Division No. Three of the Public Works in repairs, as follows:

For Superintendence and Repairs.....	\$84,000 00
“ Repairs under contract on 54th mile from Cincinnati.....	325 00
“ Rebuilding Lock No. 8, north of Loramie Summit	4,035 00
“ Rebuilding Loramie Aqueduct at Lockington.....	800 00
“ Two Culverts, substituting stone for wood.....	5,950 00
“ Rebuilding Miami Aqueduct.....	15,000 00
“ Materials and rebuilding Wooden Locks north of Loramie Sum- mit.....	5,000 00
“ Rebuilding Lock No. 40, south of Loramie’s Summit	7,300 00
“ Balance due for boats, tools, etc	1,950 00
“ Paying the outstanding checks for superintending and repairs..	1,995 21
Total for repairs.....	<u>\$126,355 21</u>

The following Tabular Statement exhibits the names of Resident Engineers, Special Superintendents, Superintendents of Repairs, Lock Tenders,

* The appropriation for superintendence, construction and repairs, assigned to this division of the Public Works, was insufficient to pay all the checks issued, and there yet remains three checks outstanding unpaid, amounting to nineteen hundred ninety-five dollars and twenty-one cents. (\$1,995 21).

† This sum is properly chargeable to construction.

Collectors of Tolls and Inspectors, who have been in the employ of the State on Division Number Three, with the salaries, allowances and perquisites paid to each, during the year ending November 15, 1858:

* Appointed by Commissioners in charge of Division No. 1.

The salaries of Collectors and Inspectors are deducted from collections, as provided by law, and the accounts audited by the State Auditor. The Board has no official means of ascertaining the amount of salary, allowance and perquisites which these officers have received. This information is obtained from the books of the State Auditor.

GENERAL REMARKS.

The aggregate of expenditure on the Public Works of the State, for the fiscal year ending November 15, 1858, including the expenses of the office of the Board of Public Works and salaries of the members, is three hundred and fifty-three thousand two hundred and seventy-eight dollars and thirteen cents, (\$352,278 13.) There is included in this amount the sum of three thousand seven hundred and ninety dollars paid for land in original Lewistown Reservoir, which is chargeable to account of construction, and should not be classed with current expenses. With this sum deducted, the current expenses for the year are three hundred and forty-nine thousand four hundred and eighty-eight dollars and thirteen cents, (\$349,488 13.)

The gross receipts for the fiscal year, from all of the Public Works, amount to three hundred and fourteen thousand four hundred and forty-six dollars and sixty-seven cents, (\$314,446 67,) from which should be deducted the expenses of collection, including tolls refunded, and salaries and incidental expenses of collectors, inspectors and gate keepers, amounting to twenty-six thousand nine hundred and eighty-seven dollars and seventy-nine cents, (\$26,987 79,) leaving two hundred and eighty-seven thousand four hundred and fifty-eight dollars and eighty-eight cents, (\$287,458 88,) as the net receipts for the year.

By this statement, it will be seen that the expenditure for current expenses exceed the net receipts, sixty-two thousand and twenty-nine dollars and twenty-five cents, (\$62,029 25,) and that the aggregate expenditures for all purposes connected with the Public works, exceed the net receipts derived from them, by sixty-five thousand eight hundred and nineteen dollars and twenty-five cents, (\$65,819 25.)

The payments made by the State Auditor during the year, on checks previously issued to contractors for repairs, amount to thirteen hundred and one dollars and thirteen cents, (\$1,301 13.)

These payments are not included in the preceding statement, but may properly be classed as payments made during the year on account of Public Works.

There has been paid out of the contingent fund for the office of the Board, for salaries of Secretary and Clerks, record books, stationery, blanks, postage and other incidental expenses—

By check of J. Blickensderfer, Jr., President, for the quarter ending

February 15, 1858 \$783 20

And by check of A. G. Conover, President, for the three quarters end-

ing November 15, 1858 1,747 91

Total \$2,531 11

In addition to the appropriations already estimated under the detailed reports for the several divisions, as necessary for the ensuing year, the following will be required:

For Claims found due and settled by the Board of Public Works..	\$1,000 00
“ Attorneys’ Fees and Incidental Expenses.....	1,800 00
“ Salaries of Resident Engineers	7,500 00
“ Salaries of Members of the Board of Public Works	4,500 00
	<u>\$14,800 00</u>

The following table gives the names, salaries and terms of service of the Members, Secretary and Clerks of the Board of Public Works, for the year ending November 15, 1858.

The salaries of the Members, and Secretary are fixed by law; those of the Clerks, by the Board. No allowance or perquisites are received by either the Members, Secretary or Clerks:

Names.	Office.	Term of Service.	Salary.	Am. paid.
J. Blickensderfer, Jr.	Mem. Bd. Pub. Works.	Nov. 15, 1857 to Feb. 15, 1858.	\$1,500 00	\$375 00

James Steele	Clerk do	“ “ May 5, 1858.	720 00	340 00
James A. Grover ...	do do	July 21, “ Nov. 15, 1858.	600 00	191 67

The expectation, which the Board expressed in their last Annual Report, of an increase of revenue from the Public Works in 1858, over the revenue of 1857, has not been realized. It would be difficult to trace all of the causes which have operated to produce a diminution in the revenue for the last year, from that of the preceding, but there are some reasons for the falling off which are apparent, and which may be briefly mentioned.

The decrease in the aggregate revenue is mainly on the Ohio Canal, and more than one-half of it is at the offices on that division which suffered such destruction from the floods of May and June last, and on a portion of which navigation was suspended, in the business season, for over two months. This long suspension of navigation had a material effect on the revenue, and was one of the causes which operated to reduce it. One-fifth of the decrease may be traced to the office at Akron, and a part of it is no doubt attributable to the persistence of the Directors of the Pennsylvania and Ohio Canal Company in arranging the rates of toll for that canal with the object of encouraging shipments by the Mahoning Railroad rather than by their canal. The competition of railroads has been active, as in former years, and may be mentioned as a general cause for the decline in our canal revenues, rather than as a special one which has affected the revenue of the past year. Other causes which have probably had an unfavorable influence might be named, but as their connection with the result is not so obvious, the subject will not be pursued.

There is an uncertainty existing as to the authority, under the present law, to appoint collectors at Roscoe, Dresden and Carroll. Each of these officers is located at a place where different divisions of the Public Works meet and each collects tolls on two distinct works, one of which is in charge of one of the members of the Board, and the other in charge of a different member. The law provides that each member shall appoint all subordinate officers on his division and specifies collectors as officers to be so appointed, but no provision is made for the joint action of two of the members in making such appointments, and the attention of the General Assembly is respectfully called to the matter.

The subject of a general reduction of the rates of toll has been of late much agitated and the advocates of low tolls express in a very confident manner the opinion that a large reduction of the tariff adopted by the Board for the last year would result in an increase of tonnage more than sufficient to compensate in revenue for the reduction of rates. In the

depressed condition of business on the canals, the Board recognizes the principle that the rates should generally be graduated with the direct object of securing the greatest possible amount of revenue to the State. The exact application of this principle is one of the most difficult things which claims the attention of the Board, and having an earnest desire to see the revenues of the Public Works in its charge increased, and believing that low tolls should be preferred if the preference can be exercised without injury to the interests of the State, the Board will continue to give the subject the most careful attention, and fix the rates at the lowest standard which, in the opinion of the Board, may be adopted without loss of revenue.

On account of the various character of the trade on the different canals of the State, and the nature of the competition which each has to contend with, the same rates of toll cannot well be applied to all, and uniformity of rates, which in itself is desirable, has had to yield to the necessity for an attempt to secure a larger revenue by the adoption of different rates on the different works.

STEAM PROPELLERS.

The demands made upon those having in charge the canals of the various States, except where the railroad companies have purchased the interest of the States, have been of that character that required every exertion to be put forth in order to increase the ability of those who had large amounts invested in canal stock to enter into successful competition with the railroad lines for the surplus property of the country seeking an eastern market.

The facility that has been offered by the railroads, for passing property from the extreme west to the eastern market, has induced shippers to avail themselves of this mode of conveyance in many instances, in order to meet the high ruling prices of the week, or the maturing paper of the owner of the produce, at prices far above the cost of transporting the same property by the cheaper and less dangerous channels of water communication. Over the greatest and most important canal route in the United States, (the Erie Canal,) the demand has been promptly met by the enterprising Canal Board of the State of New York, by the introduction of canal boats with steam propelling machinery attached, capable of carrying two hundred and fifty tons; receiving the freight at Lake ports and deliv-

ering it without transhipment, and the usual loss attending its conveyance by rail, at New York, within a time that will eventually secure to this all important canal the entire surplus produce of the North Western States seeking a market at the sea board during the season of canal navigation.

The ability of one of these steam canal propellers to thus receive their freight on the shores of lake Erie, and convey to New York thirty-one car loads, of eight tons each, within a time that will make but little difference to the owner, is of incalculable importance and pecuniary interest to the great producing agricultural classes of our Western States, none of which are so directly and deeply interested in this reduction in the cost of transportation, than the farming interest of our own State, which is now, and will be, increasing their surplus grain exports, yearly seeking an eastern market.

The system has, so far, met with such unexpected success in the State of New York, that the present lifetime of the old fashioned, slow and expensive method of propelling canal boats by horse power must terminate with the present canal stock, and its place be supplied with boats propelled by steam, and capable of making double the speed, and carrying three times the amount of freight.

The capacity of the Erie canal, it is true, is almost double that of the Ohio canal from Portsmouth to Cleveland, and of the Miami and Erie, from Cincinnati to the Junction, in Paulding county; it being seven feet deep and seventy feet surface of water, with its embankments securely protected with stone slope walls, to guard against the injurious effects of the waves, produced by the high winds and the steam propeller.

A portion of the line of canal reaching from Toledo to the fertile and productive valley of the Wabash, in Indiana, a distance of one hundred miles, could, with trifling expense, be so improved as to afford six feet of water, and be capable of carrying an amount of freight to each boat as would, it is believed, justify its transhipment at Fort Wayne in Indiana, and at the same time be capable of conveying the great surplus of this portion of Indiana, drained by the Wabash canal, as against all successful railroad competition at a price that would be alike productive to the interests of the two States and the producer.

The other canal lines of our State have a depth of four feet, and a surface of forty feet, capable, without incurring very great expense, when compared to the benefit to be derived by the State and the farming inter-

est, of being raised to five feet in depth of water. Experience must settle the question whether the enterprising spirits that have set in successful operation the steam propellers in seven feet water on the Erie canal can, with like success, so construct boats, as to be able to navigate, with proportionate gain, in five and six feet water.

The Board would feel quite willing to extend to the owners thus engaged in the experiment all the special privileges granted by the Canal Board of New York to those who introduced steam power on the Erie Canal.

ALEXANDER G. CONOVER,
JOHN WADDLE,
ABNER L BACKUS.

NOTE.—The foregoing statement, as will be seen on comparison, differs from the Report of the Auditor of State, for this reason: The books of the Auditor were closed this year on the 15th November, and only the collections which had been reported to that office up to that date are included in his report; a considerable amount of receipts, collected prior to the 15th November, not having been at that time reported by the collectors. The foregoing tabular statement shows the *actual* receipts and expenditures between November 15, 1857, and November 15, 1858.

The following tables exhibit the Aggregate Tonnage of the Ohio and the Miami and Erie Canals, for the years 1856, 1857 and 1858, in tons of 2,000 pounds each.

ANNUAL REPORT

OF THE

ADJUTANT GENERAL OF OHIO,

JANUARY 10, 1859.

OUTLINE OF REPORT.

1. ORGANIZATION UNDER NEW LAW.
2. THE PUBLIC ARMS; arrearages due from General Government; need of Arsenal for their safe keeping and repair; change in system of giving bonds necessary; inspection of Arms at their Armories, and prohibition of their removal except for military uses should be enforced; schedule of Arms in service; schedule of Arms fit for repair.
3. AUTHORITY, IN COMMANDER-IN-CHIEF, to make necessary regulations, needed.
4. THE PRESENT LAW.
5. ENROLLMENT; schedule of enrollment; enrollment, expensive and unnecessary; repeal of section recommended; same outlay would furnish adequate equipments, in all departments.
6. GENERAL OFFICERS; the number of Divisions and Brigades, excessive; gradual diminution recommended.
7. UNIFORM; the present style, serviceable, and cheap; uniformity essential; all change injurious.
8. THE VOLUNTEER MILITIA; amount of force; destitution of camp equipage; extent of supply needed; encampments useless without it.
9. COMPENSATION, for drill on days of legal muster; plan of compensation, without increase of present expense under the law; conditions upon which it should be made; not to exceed \$12,000 or \$20,000 for entire State; trial of plan, for one year, recommended; compensation in other States.
10. DISCIPLINE; orders concerning Sunday encampments, intemperance, &c., &c.
11. CAMP OF INSTRUCTION; one annual camp of instruction for officers desirable.
12. AID TO CIVIL FORCE; how far employed.
13. IMPORTANCE of preserving papers concerning war of 1812.
14. MILITIA OF OTHER STATES; compensation, &c.
15. ADJUTANT GENERAL'S OFFICE; duties; issue of commissions; enrollments; preparation and issue of forms; records, rank roll, &c.; issue of tactics; inspections; extent of correspondence; expense of clerk hire; compensation for same, and adequate contingent fund needed in justice to the department.

REPORT OF ADJUTANT GENERAL.

ADJUTANT GENERAL'S OFFICE,
COLUMBUS, January 10th, 1859.

GOVERNOR S. P. CHASE, *Commander-in-Chief*:

The act to organize the Militia and Volunteer Militia, passed March 28, 1857, has called into existence a State Militia. The constitutional officer, whose duty is at once made prominent and essential in such an organization, had, until that time, no other duties than the issue of commissions to the officers in command of a few companies scattered over the State. These companies were sustained at great expense to the members; and the absence of a controlling, regulating center, and proper legislation respecting the uniform and organization of the Militia, involved many serious evils.

While some companies indulged in extravagant uniforms, as their peculiar claim to favor, others were organized upon the basis of distinctive nationalities, necessarily excluding that fraternity of feeling which attends a common discipline and direct accountability to the State.

Not a single complete regiment existed in the State. Not even one compact, well combined, and well disciplined battalion, could be rallied, at any one point, in any event.

Under the present act, ten battalions have been organized, uniformed and equipped, and at least two regiments, of seven companies, could be depended upon, at call.

In the development of this force, every matter connected with the military affairs of the State, except the charge of the arsenal, and the immediate issue of arms, has necessarily fallen within the sphere of my official duty. To make a report of the enrollments only, would be to omit matter

of substance. I deem it my duty, therefore, to state, as briefly as possible, the condition of the militia system, as at present organized, and matters of importance germane thereto.

THE PUBLIC ARMS.

A State Arsenal, with conveniences for the repair and alteration of arms is a necessity. It will be especially needed if the State shall realize from the General Government its arrearages of public arms. To this matter attention should be given. Between the year 1845, and the passage of the late act of Congress, arms were issued to this State upon the enrollment of 1845. By neglect to adopt the new census of 1850, which indicated so large an increase of the number liable to bear arms and to renew the enrollment, the State failed to receive a large part of the arms to which it was entitled. In the absence of a militia law, the Adjutant General's office was a cipher, or only a petty clerkship, and the whole matter was neglected.

It is probable that such an approximation to the true number of males subject to military duty, could be procured, as would satisfy the General Government, and secure the arms, or their equivalent. Should the Legislature deem the matter worthy of investigation I shall cheerfully contribute whatever aid I can render in the premises. The value of such arrearages is probably not less than from *seventy to eighty thousand dollars*, if computed for the whole period.

It is unnecessary to add anything concerning the propriety of having all bonds for arms returned to the Quarter Master General. It is not less important, that active measures should be taken to protect the arms in use. The bond is inadequate. Its forfeiture is determined after the arms are lost or ruined. Officers change, companies disband, and arms are lost, long before the remedy is thought of. The evil lies in permitting the distribution among the privates. The law requires armories for the safe keeping of arms, but it is known, at this office, that armories are not in all cases provided, and that many new arms are already employed upon farms, at hunts, and for all uses, except those legitimately their own. The Adjutant General may issue order after order, requiring a report of arms in use by every corps in the State, and where, and how they are preserved; but that is not enough. When inspectors report a violation of law, or neglect to report at all, the Adjutant General should be authorized to require their collection by the Quarter Master General, and their return to the State

Arsenal. The bond itself should also contain, substantially, such a condition. Unless some such system of active supervision and accountability, without the delay of a court martial, or an action at law, be maintained, a large number of arms, now new and valuable, will be ruined by neglect. The very existence of such a provision, would be an inducement to secure a better care of the property of the State. Besides this, the inspection of the arms and men, is, intrinsically as beneficial as their drill in the manual itself; and the liability to loss of arms upon misuse of them, would be a penalty which they would respect, if any pride of corps existed whatever.

In our draft of arms, we seldom get the best. The State of New York, for two years, refused to accept its quota, on this account. During the past year, better arms have been received; but for many years, our fund was exhausted by useless revolvers and altered muskets. We need those arms which are servicable, and will supply the largest force. A few caissons, however, are needed. The report of the Quarter Master General (which, by an amendment of the law, should be made to this office,) states the number and kind of arms now in his charge. The following is a statement of arms in *actual service*, as gathered from returns to this office, and the report of Col. Wood, late agent for the collection of arms, to-wit:

ARMS IN SERVICE.

Muskets (Flint Lock).....	896
do. (Percussion).....	2,894
Rifles (Flint Lock).....	40
do. (Percussion).....	978
Musketoons.....	50
Carbines.....	125
Total.....	<u>4,983</u>
Swords (Cavalry).....	299
do. (Artillery).....	325
do. (Non-Com. Off.).....	220
do. (Musicians').....	34
Total.....	<u>878</u>
Brass Cannon.....	38
Caissons.....	17
Harness (Sets).....	146

Pistols (Flint Lock).....	368
do. (Percussion).....	271
do. (Revolvers).....	72
Total.....	<u>711</u>

It will be seen that, of the arms received during the last twenty years, but a small part are in actual service, and *many of these* are comparatively useless. Some have been sold, under the Resolution of General Assembly to that effect, with advantage to the State, but an immense number have been lost.

Additional to the arms in use, there are in the Arsenal, subject to alteration under Resolution of General Assembly, the following stand of arms, to wit: 400 muskets, 100 rifles, 200 pistols—sufficient, taken together, to arm 500 men.

The arms in use might poorly supply their legitimate proportion, to wit, 4,861 men. But, in fact, men will not thoroughly uniform and equip, in the use of carbines, and old-fashioned flint-lock muskets. Such companies as have done so, have organized with view to exchange them for new pieces.

Unfortunately the provisions of law do not authorize this exchange, and only by order of the Commander-in-Chief, derived from his necessary discretion, as such officer, can any such exchange be made. The result is, that well-established companies, which have accepted and complied with the provisions of the new law, are using the old style of arms. A single provision, incorporated in an amendment to the act to provide for the safe keeping of the public arms, *providing: that the Commander-in-Chief shall from time to time issue such general orders, and make such necessary regulations concerning public arms, and the organization and government of the militia, as are proper and necessary, with view to the better promotion of the discipline and order of the same, would supply this and kindred deficiencies.*

With regard to the whole matter of arms, it is not too much to say, that the long continued indifference to the organization of the militia has resulted in a loss to the State of many thousand dollars. The alternative seems to be, to lock up every thing, or to secure such a respectable and respected organization as will command an active interest in the care of the military property of the State.

THE PRESENT ORGANIZATION AND LAW.

While the present law contains many verbal inaccuracies and inconsistencies which affect its lucidness and force, and which it was the main design of last winter's bill to remedy, it is, in the main, adequate to its object. Many defects have been supplied by general orders, particularly respecting Returns and Sunday encampments, requiring the former, and forbidding the latter. A well digested amendment is all that is necessary.

ENROLLMENT.

The law requires an enrollment, as did the law of 1831, with its return to the War Department at Washington City, while the act of Congress has been repealed which made such an enrollment the basis of the issue of arms. The new constitution had that act undoubtedly in view. Unless the state desires to use this catalogue of names to designate what persons are liable to be called upon to do military duty, in the remote contingency of the volunteer militia being insufficient to meet any emergency requiring their services, the provision is needless and expensive. *An enrollment of one year costs more than to build a suitable State Arsenal.* The repeal of the section, or the giving to the Governor full authority to suspend the enrollment, as the constitution does *not* require it to be made *annually*, would enable the state to place in the State Arsenal, camp equipage, proportioned to the number of arms in possession of men actually uniformed and equipped, and to furnish each regiment and battallion with a set of colors and drums. The state can far better afford to appropriate five or ten thousand dollars, annually, to maintain its complement of arms and equipments, and secure such as are not provided by General Government, than to spend thirty thousand dollars annually in such enrollment.

The enrollment for 1858, as far as returned, embraces 233,677 names, from eighty-two counties, as per schedule attached.

GENERAL OFFICERS.

One serious and radical defect, and one which has been a mischief wherever enacted, is the superfluous number of general officers. The State of New York is divided into divisions—eight in number—corresponding to the judicial districts. A similar plan, allowing two brigades, or, in some cases three, to each division, would have been a signal improvement to our present system. This clause was copied from the law of 1831; and, strange

though it be, the legislature of Pennsylvania, at its last session, adopted both our law, in substance, and the division and brigade system with it.

It is a question whether the rights of officers elected, could not be preserved, and yet provisions be made for the gradual diminution of the number. There has been one redeeming feature, however: some of the ablest and best men have consented to fill these offices, and with rare exceptions there has been a disposition to put such men in command.

UNIFORM.

The uniform of the U. S. Army, according to the regulation of 1857, was adopted by the act of March 28, 1857, and it is *serviceable, cheap and becoming*. Its cost, complete, is, for infantry, \$21 50, and for light artillery \$12 50. Owing to the detail of nearly the entire Federal army to the Plains and to Utah, a modification was made, introducing a felt hat. No State has followed the example; and while the specific object of the change was a good one, there is no reason why we should fluctuate as the U. S. army fluctuates. Some might prefer the new hat; but it is no cheaper, and any change would at once break up the uniformity, which now, with few exceptions, characterizes our militia.

This matter of a common uniform, is a vital element in the organization. It compels companies to vie with each other in discipline, instead of show and splendor of dress. The present uniform corresponds, in the main features, with that of all the Eastern, and most of the sea-board States, and also with the new French and Prussian uniform, from which, for its simplicity and cheapness, it was borrowed.

STRENGTH OF FORCE.

About one hundred and fifty companies have been organized under the present law, or have accepted its conditions. It is safe to rate the force, including those now uniforming, at four thousand men. Many thousand dollars have been expended, and much pains taken to make this force effective. They deserve well of the consideration of the Legislature in respect of the best method of their encouragement. The scarcity of arms has, in part, prevented a more rapid and thorough organization; but the universal disappointment at finding the provisions of the law of 1857, respecting camp equipage, colors and drums, useless, for want of an appropriation to supply the necessary fund, has done more to discourage counties which had

in view to organize full battalions. In some sections of the State the organization has enlisted the personal interest of all the leading citizens; and no party questions have been suffered to interfere with its development. Lest some should see the nucleus of a large organization in the number now enrolled, it is sufficient to say that the number never can exceed the number of State arms. Even, at present, few Brigades embrace compact, well balanced battalions; such as have learned to act in concert, and to know the value of rigid system and business-like strictness in all their progress. The system has reached a point, however, where large investments on the part of its friends who desire thoroughly to test it, call for some recognition by the General Assembly of what has been done to execute the law, which, under the Constitution, has been placed upon the statute book.

The manner in which this aid should be rendered is a matter of importance. The majority of States, north and south, are providing amply, by actual pay, for a small well drilled Militia. They also provide, in addition to the supplies from the General Government, the other equipments before named, and issue them under bonds for safe-keeping, as in the case of arms.

The supply of tents need not be adequate for the whole force; but may be issued, as in New York, to Brigades in turn, and be returned promptly, and in good order, to the State Arsenal, at the close of encampments. Thus a few hundred tents would accommodate the whole force, which in any one season would require their use.

Encampments, without tents, are places where the soldier learns little that is good, and much that is evil. To be profitable, they must have the machinery of a camp, and then they can have its discipline. The sum of five thousand dollars, judiciously expended, would provide the State with colors, drums, tents, forge and such other stores and supplies as would give availability to the present force and its prospective increase, and establish that completeness of equipment, without which, that which we have, loses much of its value.

This sum is probably less than one-fourth of the cost of a single annual enrollment.

COMPENSATION OF MILITIA.

It is evident that the Militia, which have already purchased their uniforms, and rented armories, should not be obliged to buy their tents and equipments.

Various methods have been devised for the partial pay of a limited volunteer force, and the compensation provided by different States, is clearly stated in the report of the Military Committee of the House of Representatives to the present General Assembly.

The commutation system is clearly unconstitutional, as well as oppressive upon the poor.

In the present state of our finances, a strong dislike is entertained for a special tax. It has been demonstrated, however, in many States, and the Legislature of Connecticut passed their present law upon the avowed fact, that the old style of "Militia training" cost the commonwealth, in waste of arms, in idleness and dissipation, more than a sufficient sum to pay a well regulated and efficient force; and that, to pay for actual *time* employed at reasonable rates, was true economy in the State.

I would respectfully suggest a plan which would secure a well disciplined force, guard against waste of the funds, and be limited to the actual equivalent received by the State. In my judgment, it would pay for itself, in the better care of the public arms, and prove the most economical method to secure that end.

Take, as the basis, the number of good and sufficient State arms.

Set apart as a military fund, from three to five dollars apiece, to wit: from \$12,000 to \$20,000.

Require thorough inspection by each Brigadier-General and a return of the uniformed force of his Brigade to the Auditor of his County. Require from him a bond that he shall return no officer or soldier who has been delinquent in respect of fines, who has neglected drills or been absent from legal parades, who has been guilty of intemperance on such occasions, or other unsoldierly conduct, who has failed to comply with the requisitions of law, or who, on careful inspection, has proved ignorant of the manual of arms and the school of the soldier.

Provide that a draft of money, upon false returns shall subject the officer to loss of commission and the penalty of imprisonment.

Upon such return, the Auditor shall certify the same in duplicate to the Governor, for comparison with the Adjutant-General's records, and to the Auditor of State—the sum to be paid as other sums, upon sufficient voucher.

This fund so drawn shall not exceed at the rate of one dollar per man, officer and private alike, for each day of legal muster, not to exceed five days per annum.

The money shall be distributed to companies and men on the foregoing basis.

This basis is well ascertained military proficiency. The worthless and trifling, and all who are too indolent to learn, are subjected to inspection, and as a necessary sequence, they who receive the pay, will be those whom the State is willing and can afford to pay.

The main objection to such disbursements, that the money is thrown away, will be answered.

At all events, one trial would test the matter, and the system, with such safe guards, would commend itself to the people of the State as an earnest effort to test the virtue of our volunteer militia, and give efficiency to this constitutional requirement.

Neither is there any exclusiveness, except what the supply of arms determines. On the other hand, the inefficient will soon be lost sight of, in the struggle to excel, until we shall have a small, but reliable force, sufficient for any probable contingency, and yet not large enough to be a pecuniary burden to the State. It will be flexible and well balanced, and capable of use, whenever and wherever required, so that its locality becomes immaterial.

The compensation is too small to be an inducement, of itself, but allows common wages for the time expended.

To provide for such a fund, requires simply the transfer to that purpose, of that extra sum, which, during the year 1858, was expended upon township assessors in the enrollment, and which has been shared proportionately by every portion of the State.

In other words, the repeal of the enrollment clause, which involves annually an expense equal to this fund, will afford at least the opportunity to make the experiment, without a greater net expense than was incurred under the militia system during the year 1858.

Moreover, the force provided for, while sufficient, is less than that sustained by most of the smaller States. The Roster of the Connecticut militia, alone, just received, exhibits eight full regiments, under pay.

DISCIPLINE.

General orders have been issued, prescribing such field movements for battalion exercise, as are least technical and most practical in the exigencies, which, even in the best regulated State will arise, and call for the aid of

a military force. That, relating to Sunday Encampments has been already referred to, incidentally. It has been especially enjoined, that every act of intemperance of an officer, or soldier, when in uniform, be visited with prompt trial and condign punishment. The First Division of N. Y. State Militia owes much of its reputation to its rigid discipline in this respect. Informal complaints have reached this office concerning the delinquency of several General officers, in respect of Uniform, Inspection, Returns, and, in two cases, of Intemperance. Whenever formal charges shall be filed, there will be no alternative but their subjection to the same ordeal which requires, of the officer, certainly as much decorum and faithfulness to his charge, as of the humbler private.

CAMP OF INSTRUCTION.

The Commander-in-Chief should have authority, once a year, to convene the officers, and such limited force as would be appropriate, and organize a camp of instruction, where the officers should be drilled in the school of the soldier, as well as in their own duties.

There is danger that officers will throw upon their adjutants the burden of discipline, and know little of their command, except its pomp and circumstance. Their inspection at such a camp of instruction as is provided in most States, will furnish some opportunity to scrutinize their proficiency.

AID TO CIVIL FORCE.

Few cases have arisen for the demand of military aid on part of the civil power, yet the history, of many cities, including Cincinnati, shows how unexpectedly a State is made to feel the value of such a force. The only occasion for its employment the last year, has been to guard the insecure jail at Portsmouth, and to secure order in the execution of criminals. Two instances have come to the knowledge of this office, where, at the instance of mayors, or parties soliciting their interference, troops have been held ready to appear at a moment's warning. The control of the railroad property at Chillicothe by a mob, threatened, for a while, to require the same force, and suitable preparation was made. The vigilance of the local authorities and the influence of the citizens, however, rendered military aid unnecessary.

There can be no doubt that the presence in the State of a well-commanded and disciplined force, has a moral power, in support of law and

order, that is immense, though fully appreciated only when its aid is invoked.

THE MILITIA OF OTHER STATES.

During the summer of 1858, by the courtesy of the general officers of the first division of the New York State militia, and the adjutant generals of the States before referred to, I visited their State arsenals, and also attended their brigade and regimental reviews and field exercises. In each State the uniform is, in the main, similar to our own; but in each State the Legislature takes active means to make the force efficient. The arsenals are supplied with well-assorted stores, and as a consequence, whenever a force is required, its equipment is at once complete. Referring to abstract of House Committee's report in this matter, attached, it is sufficient to add, that Ohio pays less attention to her arms and the equipment of her small militia corps, in proportion to her position and resources, if not *absolutely* less, than any other State of the Union.

THE ADJUTANT GENERAL'S OFFICE.

The duties devolved upon this officer have become manifold and exacting.

1. *The issue of Commissions.*—This involves the examination of returns from all parts of the State; the correction of informalities, through new elections or otherwise, as circumstances require; the order for elections in counties having no general officers; the instructions of new organizations as to the manner and forms of procedure; the filling of commissions and procuring their record in the Secretary of State's office, as well as upon the books of this office, and the correspondence which accompanies their distribution.

The number issued under the present law is nearly 1,200, and has reached the number of 60 monthly in some instances. Arms are only issued to companies that have uniformed, in order to obtain *that pledge* that they will be appropriately used and cared for. Each company must also first secure a certain number, pledged to serve for five years, upon its enlistment roll, before it can be entitled to a place upon the books of the Adjutant General's office, or can even organize or elect officers.

To file these papers systematically, and make record of all matter proper subject of record, and maintain the organization, is a daily tax upon the office.

2. *The Enrollment.*—This branch of duty has required correspondence with a majority of the county Auditors. Their reports were received too late for return to the War Department at Washington within the period prescribed by law; but the systematic charge of them, in the manner contemplated, demands time, and is of no use to the State.

3. *The Preparation and Issue of Forms.*—This department of duty is laborious. They embrace *enlistment rolls, poll books, bonds*; blanks for the returns of companies, battalions, squadrons, brigades, and divisions; forms for returns of arms, equipments, discipline, muster, and whatever becomes matter of duty or responsibility on the part of any, holding office; as well as blanks for courts martial and the collection of fines, and other forms, without which no systematic organization can exist.

I take this opportunity of acknowledging the indebtedness of the office to my predecessor, General S. D. Harris, for blanks prepared by him.

In this department blanks have been procured from other States, with the view of furnishing our militia the best practical method of such organization.

4. *The Issue of Tactics.*—The supply from the general government is insufficient, even in respect of Hardee's system. We need to issue copies of Scott's tactics to infantry of the line. A reasonable number should be purchased by the State, and proper rules be established for their safe keeping and return. We may procure the former, in increased proportion, through our delegation in Congress, but Scott's Tactics can be procured only by purchase. These books are issued by mail to those who are entitled to receive them.

5. *Inspection.*—No attempt has been made to inspect, generally, at brigade encampments. Only two have been visited. Inspection was had of collected arms at the State arsenal with a view to determine their fitness for re-issue. No provision is made by law even for travelling expenses, much less for that loss of time which would follow the discharge of that duty through the State.

6. *General Correspondence.*—*This is a business of itself*, involving the office to the extent of *seven or eight hundred letters annually*, besides those that accompany commissions. Many of these require the preparation of opinions upon legal and practical questions submitted from all parts of the State, and which the Adjutant General alone can respond to.

With the failure of the militia bill last winter also failed the appropriation of a sum to apply upon the clerical labor of this office. During the six months last past that labor has become exacting and oppressive. Yet, not a single duty now enjoined can be omitted while *any* militia law exists, nor can it be slighted without detriment to the service.

The actual appropriation made, and called *salary*, will not compensate for the last item referred to, while it is less than half the amount assigned to the most subordinate clerkship in any other department.

At present there are collections of pay sheets, rolls, and other documents connected with the Indian wars and the war of 1812, in the basement of the State House, and which have been for years hid in rubbish, which need attention; and within the term of office of this incumbent two applications have been made to him, under advices from Washington, touching these matters. It is hardly practicable, however, to even commence the work of their assortment while so many other matters demand attention, and the whole is comparatively a gratuity to the State.

The present Adjutant General, in the attempted discharge of the duties of the office, has been compelled to employ assistance and pay for the same, rather than be mortified by failure, sacrifice other interests, or bring discredit upon the office.

If the office had been endowed with a contingent fund sufficient to compensate for its responsible duties in times past, thousands of dollars would have been saved to the State, and our arsenal would have been stocked with arms. Better abandon all show of an organization, repeal all laws, discard all responsibility, and put an end to even a volunteer system, or maintain its executive office at a grade which can admit of efficiency and the exercise of its true functions.

Respectfully submitted,

H. B. CARRINGTON,
Adjutant General.

ABSTRACT FROM HOUSE COMMITTEE REPORT REFERRED TO, RESPECTING LAWS OF OTHER STATES.

NEW ENGLAND STATES.

Three of these States have *new* and efficient laws, viz.: Massachusetts, Connecticut and Rhode Island. The others are preparing amendments. The laws, in length, are as follows:

1. Maine—215 sections; paying executive officers, such as Adjutants, &c., from \$10 to \$25 per annum.
2. New Hampshire—83 sections, besides several amendments.
3. Vermont—134 sections; pays privates \$1 per day, and certain exemption from tax.
4. Massachusetts—240 sections in 101 pages; pays each private at company parades \$1.50 per diem; at camp muster \$2.50. Limits the amount to \$9 each man per year. The members of band draw \$3 each per day; State pays from military tax. Equipments furnished, and camp equipage
5. Rhode Island—178 sections; pays each foot officer and man \$1.50 per diem; each mounted man \$2 for horse—\$3.50 per diem; two musicians to company each \$2 per diem; regimental band each man \$2 per day. Equipments furnished, and camp equipage. State pays from Treasury. Parade from three to six days.
6. Connecticut—111 sections; amendments, 59 sections; pays each foot officer and man \$1.50 per annum; each mounted man \$1 extra—\$2.50; each member of band \$2.50. Arms, colors, and camp equipage supplied by State through Quarter-Master General. Parade from three to nine days.

OTHER STATES—MIDDLE STATES.

1. New Jersey—88 sections; several amendments; amendments now pending.
2. New York—Shaped after New England laws mainly, but amplified; 502 sections.

Pays privates, each.....	\$1.25 per day.
“ Mounted do.....	2 25 “
“ Foot officers.....	1.50 “
“ Field do	2.00 “
“ Brigadier General.....	4.00 “
“ Major General.....	5.00 “
“ Staff officers.....	2.00 to 2.50 “
“ Governor's staff.....	2.50 “

All camp equipage furnished. Paymaster General disburses fund.

3. Pennsylvania—old law in force. The military men and legislative committees are engaged in modifying the law. Philadelphia encourages her own force. [During March, 1858, this State passed a law similar in many respects to that of Ohio, but making liberal provision for the compensation of the Militia and the Heads of Departments.—*Adj. Gen.*]

4. Maryland—77 sections; amendments, 34 sections. Total, 131 sections. Furnishes all equipments. U. S. uniform, using letters "M. M." for U. S.

SOUTHERN STATES.

1. North Carolina—95 sections; pays officers and men the equivalent to the pay and rations of the regular army for the days of muster. U. S. uniform, with slight changes.

2. South Carolina—710 sections; pays officers and men the equivalent to the pay and rations of the regular army for the days of muster. Appropriated \$80,000 from State Treasury to aid the military force of Charleston, &c. Camp equipage furnished. U. S. uniform, except letters and pompons.

3. Mississippi—213 sections; State sustains the system.

4. Louisiana—81 sections; State aids the system.

5. Tennessee—111 sections.

6. Kentucky—135 sections.

Ohio—72 sections; State buys no arms; can only add 1,009 muskets per annum, being the extreme quota from U. S. The proposed tax would levy \$5 per annum for each *fully armed, equipped, and uniformed man*.

Those counties alone pay, which have the force.

This fund pays the *men nothing*. It does not approximate the encouragement afforded the people in military training by all the other leading States.

It furnishes each company, instruments to the value of \$10, to belong to the State.

It furnishes camp equipage.

The residue goes to the safe keeping and storing of the arms, and interests the men themselves in their safety and preservation. The State reaps the entire benefit, as the whole fund goes into permanent and needed equipments, which will still belong to the State.

REVIEWS DURING 1858.

The only general review (attended by the Commander-in-Chief) during 1858, was at Dayton, July 8.

The following corps were present:

1st Regiment Infantry, Col. E. A. King, consisting of Companies A, B, C, D, E, F. (Company G has been recently organized.)

This excellent regiment was the first to organize under the new law, and has been so drilled that its Colonel reports that two hours' notice would bring it under arms.

The remaining Companies were from various Brigades, to wit:

3rd Brigade,	1st Division	4 Companies.
1st "	2nd "	2 "
5th "	8th "	3 "
2nd "	17th "	2 "
2nd "	3rd "	2 "
3rd "	2nd "	3 "
3rd "	2nd "	6 "
Total		22 "

Inspection was had, and a silver medal awarded to Sandusky Light Artillery, Rover Guards, (Infantry,) Cincinnati, and Dayton Light Guard, (Infantry.)

Such occasions have proved of service in other States, and would benefit our own militia. Elsewhere, as during the year 1858 in Pennsylvania, they have been ordered by and governed under the direct instance and supervision of the Commander-in-Chief.

DETAILED STATEMENT

OF THE

RECEIPTS AND DISBURSEMENTS

OF THE

PUBLIC MONEY AT THE OHIO STATE TREASURY,

FOR THE FISCAL YEAR 1858.

PREPARED BY THE AUDITOR OF STATE.

20—Ex. Doc.—PART II.

RECEIPTS FOR FISCAL YEAR 1858.

GENERAL SUMMARY.

State Taxes (including delinquencies) collected on the grand duplicate of 1857, viz :

For State Debt or Sinking Fund.....	\$724,665	55	
“ State Expenses or General Revenue Fund....	572,004	88	
“ State Common School Fund.....	1,213,097	14	
“ District Library Fund	39	72	
Total State taxes collected			\$2,509,807 29
Canal Tolls, Fines and Water Rents.....	283,028	61	
Western Reserve and Maumee Road Tolls	2,272	68	
Sale of Derrick	65	00	
			285,366 29
Sales of Sections 16 and 29 and Virginia Military and Western Reserve School Lands	71,662	83	
Dividends on Turnpike and Railroad Stocks and Bonds held by the State.....	25,839	47	
Interest and Principle of Surplus Revenue.....	20,633	28	
Sale of lands by Fund Commissioners.....	1,392	32	
Rents of National Road	6,105	00	
			125,632 90
Auction duties, Peddlers' and Show licenses	8,714	23	
Earnings of Ohio Penitentiary.....	61,739	05	
Overwork “ “ Convicts	4,038	51	
Bank taxes	793	04	
Miscellaneous sources of Revenue	610	20	
			75,895 03
From Fund Commissioners as proceeds of “ tempo- rary loan ” and interest.....	704,657	54	
Amount of interest returned not called for in New York	57,362	52	
			762,020 06
Total Receipts for fiscal year 1858			\$3,758,721 57

RECEIPTS FROM STATE TAXES, AUCTION DUTIES, SHOW AND PEDDLERS' LICENSES.

Statement showing the amount of State Taxes paid by the Treasurers of the various Counties of Ohio, into the State Treasury, during the fiscal year ending November 15, 1858. Also, the amount of Peddlers' Licenses, Auction Duties, and Show Licenses, paid in like manner.

Date.	Names of Counties	Names of Treasurers by whom Paid.	State Debt or Sinking Fund.		General Rev- enue for State Expenses.		State Com- mon School Fund.		District School Lib- rary Fund.	Total State Taxes.	Peddlers' Licenses.	Auction Duties.	Show Licenses.

THIRTEENTH ANNUAL REPORT
OF
THE COMMISSIONERS
OF THE
OHIO STATE LIBRARY;
FOR THE YEAR 1858:
WITH
A HISTORICAL SKETCH,
BY THE LIBRARIAN.

RULES OF THE LIBRARY.

HOURS.

The Library is open every day except Sundays.

During the session of the Legislature, from 9 o'clock A. M., till 12 M. 2 P. M. till 5. 7 P. M. till 9.

After the adjournment of the Legislature, from 8 A. M. till 12 M., and from 2 P. M. till 5.

REGULATIONS.

All persons are permitted to visit the Library and examine and read the books, magazines and newspapers.

Those entitled to take out books are—

By Law—

Members and ex-Members of the Legislature.

State Officers and Clerks in the several departments.

The Judges of the Supreme Court and Court of Common Pleas.

Superintendent and Teachers in the Benevolent and other State Institutions.

By Resolution—

Pastors of Congregations in Columbus.

RESTRICTIONS.

Not more than two books can be taken by any person at one time.

All books must be returned within two weeks.

Books which have been in the Library not more than three months, may be kept out only one week.

Books of reference, and other books of peculiar value, are kept from circulation.

A public officer who gives any other person an order to take out books, vitiates his own right.

Any books lost or damaged must be paid for or replaced.

Loud talking forbidden.

Smoking prohibited.

THE OHIO STATE LIBRARY.

HISTORICAL SKETCH.

FIRST PERIOD—1817 to 1824.

The Ohio State Library was established by Governor Thomas Worthington, in the year 1817. For several years previous to that time, the need of such a library had been discussed. There was no provision for the preservation of regular sets of the laws and journals, nor any authorized place of deposit for maps, laws, documents or journals which might be sent from other States. The General Assembly, which met December 2d, 1816, appropriated \$3,500, as a contingent fund for the Governor in 1817. In the summer of that year, Governor Worthington made a visit to cities in the eastern States, for the purpose of investigating the plans of management in practice for penitentiaries and other State Institutions. While in Philadelphia, he determined to purchase a collection of books for the establishment of a State Library in Ohio. On his return to Columbus, he authorized the fitting up of a room over the Auditor's office, in the south end of the State-office Building, then on High-street, just south of the avenue to the east entrance of the State House. He deposited therein the books he had selected, and had them arranged on shelves.

When the sixteenth General Assembly met, in December, 1817, the Governor reported in detail, the steps he had taken, for the founding of a State Library.

In his message, which was read to the General Assembly December 2d, 1817, Governor Worthington said: "The fund made subject to my control

by the last General Assembly, beside paying the ordinary demands upon it and for articles mentioned in the resolution of the Legislature, of the 28th of January, 1817, has enabled me to purchase a small, but valuable collection of books, which are intended as the commencement of a library for the State. In the performance of this act, I was guided by what I conceived the best interest of the State, by placing within the reach of the representatives of the people, such information as will aid them in the discharge of the important duties they are delegated to perform."

On the 9th of December, the Governor sent a communication to the Legislature, in which he reported the titles of the books he had purchased, and the rules he had authorised for the management of the library.

The following is the catalogue of books which formed the basis of the Ohio State Library:

BOOKS PURCHASED BY GOV. WORTHINGTON—1817.

- *Robertson's Charles V., 2 v. 8vo.
- British Classics, 78 v. 12mo.
- Russell's Modern Europe, 5 v. 8vo.
- Fox's James II., 8vo.
- Robertson's India, 8vo.
- *Robertson's America, 2 v. 8vo.
- Stephens' French Wars, 2 v. 8vo.
- Marshall's Washington, 5 v. 8vo., and Atlas.*
- Ramsay's do 8vo.
- Ramsay's United States, 3 v. 8vo., calf, gilt.
- Gordon's America, 3 v. 8vo.
- Lee's Memoirs, 2 v. 8vo.
- Mosheim's Ecclesiastical History, 6 v. 8vo.
- Millner's Church History, 5 v. 8vo.
- Hawie's do do 2 v. 8vo.
- Clarkson's History of Slavery, 2 v. 12mo.
- Life of Penn, 2 v. 12mo.
- Clarke's Travels, 4 v. 12mo.
- Labauume's Campaign in Russia, 8vo.
- Brackenbridge's Late War, 12mo.
- Lewis & Clarke's Travels, 2 v. 8vo.
- Two Bibles, No. 22, 4to.

Two Bibles, 12mo.

American State Papers, 8 vols. 8vo.

Journals of Congress, 13 vols. 8vo.

*Azuni's Maratime Law, 2 v. 8vo.

Franklin's Works, 4 v. 8vo.

Burke's Works, 6 v. 8vo.

Chapman's Select Speeches, 5 v. 8vo.

Woodfall's Junius, 2 v. 8vo.

Josephus' Works, 3 v. 8vo.

Murphy's Tacitus, 6 v. 8vo.

Plutarch's Lives, 6 v. 12mo.

Ferguson's Rome, 3 v. 8vo., calf, gilt.

Gibbon's Rome, 8 v. 8vo.

Anacharsis' Travels, 4 v. 8vo.

Rees' Cyclopaedia, 32 v. 4to.

Malthus on Population, 2 v. 8vo.

Smith's Wealth of Nations, 2 v. 8vo.

Village Sermons, 2 v. 12mo.

Blair's Sermons, 2 v. 8vo.

*Blair's Lectures, 8vo.

Cave's Lives of the Apostles, 2 v. 8vo.

*Paradise Lost, 24mo.

Olive Branch, 8vo.

Ferguson's Lectures, 3 v. 8vo.

*Walker's Dictionary, 8vo.

Johnson's do 8vo.

Sheridan's do 8vo.

Jefferson's Notes, 8vo.

Aikin's Letters, 24mo.

*British Spy, 24mo.

Boziman's Maryland, 8vo.

*Biddle's Architecture, 4to.

British Cicero, 3 v. 8vo.

Diversions of Purley, 2 v. 8vo.

Niles' Weekly Register, 11 v. 8vo.

Memoirs of Philadelphia Ag. Soc., 3 v. 8vo.

Livingston on the Sheep, 12mo.

- Evans' Millwrights' Guide, 8vo.
- Locke's Essays, 2 v. 8vo.
- Brown's Dictionary of the Bible, 8vo.
- *Washington's Address, 32mo.
- *Rowlett's Interest Tables, 4to.
- Workman's Gauging, 8vo.
- Humboldt's New Spain, 2 v. 8vo.
- Pike's Expedition, 8vo.
- Cruden's Concordance, 4to.
- *Sully's Memoirs, 5 v. 12mo., calf, gilt.
- *Locke on Education, 12mo.
- *Pope's Works, 8 v. 12mo.
- Laws of North Carolina, 1 vol.
- “ “ New York, 5 vols.
- “ “ New Hampshire, 2 vols.
- “ “ South Carolina and Georgia, 1 vol.
- “ “ Delaware, 1 vol.
- “ “ South Carolina, 1 vol.
- “ “ Virginia, 1 vol.
- “ “ Vermont and Connecticut, 1 vol.
- “ “ Massachusetts.
- “ “ Tennessee, 1 vol.
- “ “ Ohio, 112 vols.
- Journal of the Ohio House of Representatives, 15 vols
- Journal of the Ohio Senate, 4 vols.
- American State Papers, Wait's Ed., 10 vols.
- Hening's Statutes, 7 vols.
- Laws of New Jersey, 2 vols.
- Old Congress, 19 vols.
- Statutes of Connecticut, 1 vol.
- Revised Code of Virginia, 1 vol.
- Laws of Massachusetts, 1 vol.
- “ “ Pennsylvania, 5 vols.—2, 3, 4, 5, 8.
- “ “ Virginia, 4 vols.—1808, 1809, 1813, 1814,
- “ “ Maryland, 2 vols.—1810, 1815, 1816.

All of these books are now in the Library except those marked thus * in all, twenty-eight volumes.

On motion of Gustavus Swan, a member of the House for Franklin county, a resolution was adopted on the 17th of January, 1818, accepting the Library which Governor Worthington had purchased, and appointing a joint committee consisting of three members of the House, and two members of the Senate * to report rules and regulations for the same.

This committee reported in favor of the regulations which the Governor had authorized. On the 29th of January, 1818, his Excellency was charged with the care of the Library, and with slight modifications the rules he had reported were approved and authorized. They were as follows:

REGULATIONS FOR THE STATE LIBRARY—1818.

1. The Library shall be kept in one of the public offices.
2. The Library shall be opened every day during the session of the General Assembly, Sundays excepted, from eight o'clock in the morning to one o'clock afternoon, and from four o'clock, until eight in the evening.
3. It shall be the duty of the Librarian to label and number the books and make and preserve due catalogues of the same; he shall also keep an accurate account of all issues and returns of books as the same shall be made.
4. Books issued by the Librarian shall be returned as follows:
A folio within three weeks; a quarto within two weeks; an octavo or duodecimo within one week.
And no member shall receive more than one folio, one quarto, or two octavos or duodecimos at one time, unless when so connected as to be otherwise useless.
5. The Librarian shall open account with the Governor, Secretary, Treasurer and Auditor of State, the Judges of the Supreme Court, and the members of the General Assembly and their respective clerks in which he shall charge them respectively with all books issued, and credit them with all books returned, and in case any person entitled to books shall detain one beyond the limited time, he shall forfeit and be charged as follows: For folio, twenty-five cents per day; a quarto, octavo or duodecimo, twelve and a half cents per day, which forfeiture may for good

* Mr. Swan was on the House committee; the names of the other members in the House are not recorded. The committee for the Senate was composed of William Trimble, of Fairfield county, and Robert Lucas, of Gallia, Lawrence, Scioto, Pike and Jackson.

cause shown, be remitted by the Speaker of the Senate or House of Representatives for the time being. And in case any person entitled to the use of the Library shall neglect or refuse to pay any penalty incurred by not returning any book or books within the time above specified, unless the same shall be remitted as aforesaid, his rights from the time of such neglect or refusal shall cease, and until he shall comply with these rules and regulations.

6. All books shall be returned two days before the close of a session, whether the time allowed had expired or not.

7. If a book be returned damaged, the person returning it shall not be entitled to another, until the damage for the first shall be satisfied and the Librarian shall charge the person therewith.

8. The Librarian shall, two days before the termination of every session of the Legislature, furnish the Speaker of both houses with a list of members who have been delinquent, particularly specifying the nature of the delinquency, and it shall be the duty of the Speaker of each house in settling the accounts of any such member, to retain a sum equal to double the value of the book or books detained, and if a part of a set shall be detained, then double the value of the whole set, and also a sum equal to the fines and damages with which such member may stand charged.

9. That before any Senator or Representative shall obtain leave of absence for the remaining part of the session, it shall be the duty of the Speaker of either house to ascertain from the Librarian the state of such member's account; and in case such Senator or Representative shall be delinquent, a sum shall be retained to cover the value of the books or sets of books detained and penalties incurred.

The expenditures for the Library had been—

Books per catalogue.....	\$945 67
Binding.....	50 00
Binding.....	82 00
	<hr/>
	\$1,077 67

The General Assembly exhibited its cordial endorsement of the disposition which the Governor had made of that sum, from his Contingent Fund, not only in the resolution accepting the Library, but by an appropriation of \$1,000, made January 27, 1818, for the purchase of laws and reports of other States and of the United States, and of other books to be selected by the Governor.

Agreeably to the rules established, Governor Worthington entrusted the care of the Library to John L. Harper, during the session of the General Assembly for 1817-18. He was consequently Ohio's first State Librarian. He was paid for his services \$2 a day, during the session of the Legislature.

The first gift to the Library, on record, was by Jeremy Bentham and Robert Owen, through John Quincy Adams, Minister to England. It consisted of the following works:

BOOKS PRESENTED BY JEREMY BENTHAM.

Plan of Parliamentary Reform, 1 vol.

Panopticon, or Inspection House, 2 vols.

Panopticon—postscript or additions; two sets, 4 vols.

Chrestomathia in two parts, or plan of a day school, 2 vols.

Preliminary sketches relative to the poor, in 4 parts, 4 vols.

Draught of new plan for the organization of the Judicial establishment in France, 7 vols., with an addition or succedaneum.

An address to the inhabitants of New Lanark, 1 vol.

A view of the Hard Labor Bill, 1 vol.

Pauper management improved, 1 vol.

A Table of the Springs of Action, 1 vol.

Essay on Political Tactics, 1 vol.

Address to the National Convention of France, 1 vol.

Defence of Economy against the late Mr. Burke.

"Swear not at all," exposure of an Oath, 1 vol.

Circular on Edification, 1 vol.

Letters to the Citizens of the United States, 8 vols.

BY ROBERT OWEN.

Owen's New View of Society.

Observations on the Manufacturing System.

All of these works are now in the Library, in good condition, excepting three volumes,—the pamphlets presented by Mr. Bentham and by Mr. Owen.

The first request to the Library, for donation or exchange of Ohio laws or journals, was from Samuel M. Burnside, January 26, 1818. It was on behalf of the American Antiquarian Society at Worcester, Massachusetts,* of which Mr. Burnside was the Secretary.

* An exchange then opened, for many years interrupted, was, in 1858, renewed—for which cordial acknowledgements of the officers of the Society have been received.

When the Legislature adjourned, January 30, 1818, the Library was closed. Governor Worthington immediately made his arrangements to increase the number of books according to the authority given him. He was unable to purchase complete sets of the United States Laws and Documents, or the laws or documents of other States, but he procured many volumes by exchanging Ohio laws and documents for them. No report of the titles of the books received in exchange was made, but a list of those which were purchased the Governor reported to the Legislature soon after it was opened, in 1818. The cost of the different works bought was not stated, but the aggregate expenditure was no doubt equal to the appropriation, because no balances were reported. The following list comprises the additions to the Library by virtue of the first direct appropriation for it:

BOOKS PURCHASED BY GOV. WORTHINGTON—1818.

Edinburgh Review, 29 vols.

Index to do.

Hume's England, 8 vols.

Montague's Works, 5 vols.

Pitken's Statistics.

Cranch's Reports, 9 vols.

Wheaton's do. 3 vols.

Rollin's Ancient History, 8 vols.

History of Chili, 2 vols.

Vicar of Wakefield.

Bristed's Resources of United States.

Do. do. Great Britain.

Plowden's Ireland, 5 vols.

Chase's Trial.

Wilkinson's Memoirs, 3 vols. and Atlas.

Don Quixote, 4 vols.

Peter Pindar, 4 vols.

Woodhouse Chaptal's Chemistry, 2 vols.

Pinkerton's Voyages and Travels, 6 vols. 4to.

Riley's Narrative.

Condillac's Logic.

Vision of Columbus.

Cooper's Justianian.

Taylor's Inquiries.

Granville's Political Economy.

Wilson's Works, 3 vols.

Federalist, gilt.

Niles' Register, vols. 12, 13, 14 and Index.

Franklin's Works, vols. 1 and 6.

Rees' Cyclopaedia, vols. 33 and 38.

Johnson's Reports, 14 vols.

Life of Chatham, 3 vols.

Pathier on Obligations.

Shakespeare's Works, 9 vols. Plate.

Sinclair's Code of Agriculture.

Cardinal de Retz.

Dallas' Reports, 4 vols.

Binney's Reports, 6 vols.

Massachusetts Reports, 14 vols.

Herring's Mumford's Reports, 4 vols.

Mumford's Reports, vols. 1, 2 and 4.

Harris & Henry's Reports, 3 vols.

Cave's Law of the F., 2 vols.

Tucker's Blackstone, 5 vols.

In all, 183 volumes.

Resolutions were passed by the seventeenth General Assembly (1818-19) authorizing the Governor "to purchase five copies of Binns' splendid edition of the Declaration of Independence,"* and giving the judges of courts of common pleas the priveleges of the Library. Ethan Allen Brown, who succeeded Thomas Worthington as Governor, in 1818, executed commissions for the library in the second year of its existence. One thousand dollars were appropriated for the purchase of books in the third year. That appropriation was not expended by Governor Brown in 1819-20, and the General Assembly of 1820-21 repealed the clause in the law which authorized it.

The Library was not again recognised in the appropriation bill till 1824. Meantime, however, several special purchases were authorized.

* The one (a large engraving, framed) deposited in the Library, is now in a good state of preservation.

The responsibility of appointing a Librarian was taken from the Governor, on the first day of the session of the nineteenth General Assembly, December 4th, 1820. Senator John Mathews, of Muskingum county, moved the appointment of David S. Brodrick as Librarian. The Senate adopted the motion, and the House concurred. Mr. Brodrick's term was during the session of the Legislature, and he was paid \$2 per day. The first clerk in the Auditor's office was, by resolution, charged with the care of the Library after the adjournment of the General Assembly.

The nineteenth Legislature took notice of the Library in two other particulars worthy of record. Recognising the importance of the preservation of the journals and laws of the North-west Territory, and of the State of Ohio, the House appointed a committee "to ascertain whether the territorial laws, journals of the Constitutional Convention, and the journals and laws of the State government were in the public or State Library." That committee, through its chairman, Elisha Whittlesey, member of the House from Trumbull county, reported on the first day of January, 1821, as follows:

REPORT OF LIBRARY COMMITTEE—1821.

"There is no copy of the laws adopted or enacted by the Governor and Judges under the territorial government, in either of the public offices or State Library. There is in the office of the Secretary of State, the enrolled bills of all the laws and resolutions passed by the Legislature of the territorial government. The committee have not been able to find the journal of the Convention, either in manuscript or print. There are no printed volumes of the laws of either the territorial or State government within our reach, of an earlier date than the session of 1806-7; nor have we found any journals of an earlier date than the session of 1807-8; regular sets of the laws and journals subsequent to these periods, are in the Library. The committee are of opinion that the deficiencies in journals and laws ought to be supplied, and recommend the adoption of the following resolution:

"Resolved, by the General Assembly of the State of Ohio, That the Governor of this State be, and he hereby is authorised to procure such laws as were adopted by the Governor and Judges, under the territorial government; a journal of the Convention; the laws of the State government, passed prior to the session of 1806-7, and the journals of the Assembly, prior to

the session of 1807-8, and that the same, or such parts thereof as he may obtain, be placed in the State Library; and the expense thereof be paid out of the contingent fund."

The Senate accepted this Resolution, and, on the 15th of January, on motion of Mr. Mathews of Muskingum, sent the following to the House for its concurrence:

"Whereas, Caleb Atwater, Esq., of this State, has, with much industry, collected interesting information relative to the antiquities of the western country generally, and particularly of the State of Ohio, and has arranged and digested the same in such a manner as to form a large part of the first volume of the Transactions of the American Antiquarian Society, lately published at Worcester, Massachusetts, thus contributing to the promotion of general science, and at the same time showing to the world that the State of Ohio contains objects worthy of scientific research: Therefore,

"Resolved by the General Assembly of the State of Ohio, That the Governor be, and he is hereby authorized to purchase two copies of the first volume of the Transactions of the American Antiquarian Society, for the use of the State Library, and to give his order for the same on the Treasurer of State, to be paid out of any money not otherwise appropriated."

The House struck out "Whereas and words following until Resolved," but concurred in the Resolution.*

The first Resolution authorizing the journals and laws of Ohio to be sent to other States in exchange for their journals and laws, was passed February 2, 1821. Governor Worthington had made exchanges in 1818, under indirect authority; but for 1819-20 no authority, direct or indirect, was given. Since 1820 the Ohio State Library has every year received valuable accessions, by virtue of that system of exchanges suggested by Massachusetts in 1811, and promoted by a law of Congress, passed June 30th, 1834, which authorizes the free transmission by mail of public docu-

* The antiquarian volumes were purchased and are now in the Library, but the territorial and State journals and laws, with the exception of one volume of territorial and three of State laws, were not procured. The Library did not possess a complete set of the State journals and laws for several years after that time. It has not now a full set of the State journals (the Senate Journal for 1803-4 being wanting), nor has it any of the journals of the territorial Legislature. The Commissioners would be much obliged to any person who would inform them where the volumes missing can be procured.

ments, from one State to another, under the frank of the Governor of the State from which they are sent.

No events of special interest marked the history of the Library between 1821 and 1823. The expenditures for it did not exceed one hundred dollars. The Legislature which assembled in December, 1823, recognized its importance more decidedly than any of its predecessors. Then was passed the first law respecting it, and then a librarian, required to give bonds for the care of the Library, and having a term of office longer than the session of one Legislature, was appointed.

The gentlemen who had been librarians were—

John L. Harper—1817—1818.

John McElvain—1818—1820.

David S. Brodrick—1820—1824.

The expenditures for the Library, on record, between 1817 and 1824 were :

1817.....	\$1,077 67
1818.....	1,000 00
1818 to 1824.....	*100 00
Total	<u>\$2,177 67</u>

The accessions to the catalogue in all the departments were :

1817.....	495
1818	175
1818 to 1824.....	1,047
Total	<u>1,717</u>

*Estimated.

SECOND PERIOD—1824 to 1844.

The year 1824 is memorable in the history of the Library, for legislative recognition which cause it to be acknowledged as one of the Institutions of the State. On the first day of the session of the General Assembly for 1823-4, Leonard H. Cowles, a member of the House, from Delaware county, moved that a Librarian be appointed in joint convention of the two branches of the Legislature. His motion was adopted. The Senate accepted the Resolution, and the election, held on the afternoon of December 2d, 1823, resulted in the appointment of Zechariah Mills.

On the 11th of December a joint committee, which had been appointed, on motion of Senator Fithian, who represented Champaign, Clark, Logan, and Wood counties, reported the results of an examination into the affairs and condition of the Library. It was stated that during the recess of the General Assembly, a key to the Library had been obtained, by parties unknown, and fifteen books, together with the pamphlets presented by Jeremy Bentham and Robert Owen had been abstracted. The committee * therefore recommended that increased attention, and more liberal appropriations be given the Library, and that some person be appointed to take care of it, when the Legislature was not in session. These recommendations led to the passage of the first law enacted for the management protection and enlargement of the Library. The bill for these purposes was presented in the House by Mr. Simmons of Knox county, on the 23d of December. It became a law January 20th, 1824. It provided for the appointment of a Librarian for the term of three years, fixed his salary at \$200 a year—required him to give bonds for the faithful discharge of his duties in the sum of \$2,000, appropriated \$350 a year for four years, for the purchase of books for the Library, and stipulated that contingent expenses were to be paid out of the Governor's Contingent Fund.

Zechariah Mills was continued as Librarian under the law.

* That committee consisted of Senators Fithian of Champaign, Simpson of Harrison, Koken of Franklin, and Representatives Stockton of Muskingum, Patterson of Morgan, Grumman of Guernsey and Blickensderfer, of Tuscarawas.

One section of that law was as follows:

"That each judge of the Supreme Court, president judge of the Courts of Common Pleas, and each member of the General Assembly, may, in the months of December and January, in each and every year, sign and lodge with the Secretary of State, a memorandum or list of such book or books as he may think proper, to be added to the State Library. And the Governor shall on or before the first day of June, annually, examine said lists or memoranda and select therefrom such as he may think proper, including such others as he may deem important to add to such selection, the estimated cost of the whole, to be equal to the amount to be expended annually, as provided in the fourth section of this act, and he shall make out a schedule accordingly, of such books as shall be purchased for the State Library."

The legislature which enacted the law from which this extract is taken, first recognized the Library, in the act authorizing the distribution of the laws and journals of the State, by requiring the Secretary of State to deposit five copies of each therein. In his annual message for 1824-5, Governor Jeremiah Morrow reported that the appropriation for books had not been expended. He asked for "a considerable appropriation" which he deemed necessary to give the Library due importance, and recommended that the Librarian be authorized "to subscribe for periodical works." The Governor's recommendations were not acted upon; but in his message for 1825-6 he renewed them, and then reported that arrangements had been made to purchase books with the money which had been set apart under the Library law, but they would not probably be in the Library till after the adjournment of the Legislature. Whether that notice had any effect or not, the Governor's suggestion was regarded. The Librarian was given \$50 for paying subscriptions to such newspapers and magazines as he might deem valuable for preservation. In no other respect were the advantages of the Library enlarged, but its privileges were extended to the judges of the United States Courts.

Special notice of the Library was not taken either by the Governor, or by the Legislature in 1826-7—but in his annual message for 1827-8, Governor Allen Trimble notified the General Assembly that he had authorized the expenditure of \$421 for books, and had made arrangements to disburse \$721 yet remaining in the Treasury. A few days before the adjournment of the General Assembly, (Feb. 9, 1828,) Eli Baldwin, Senator from

Trumbull county, from a committee on the Library paragraph in the Governor's message, reported that the entire appropriation for the purchase of books had been expended, and recommended that \$350 be given for books, and \$50 for periodicals. These recommendations were embodied in the bill making appropriations for 1829.

The facts most worthy of record in the history of the Library between 1830 and 1840 may be stated in a few lines.

In his annual message, December, 1833, Governor Robert Lucas gave notice of the first exchange which Ohio had made with any other State, of reports and decisions of the Supreme Court. It was in these words:

"I received from the Executive of the State of Maryland, through the post office, sixteen volumes of Maryland Reports, commencing with the organization of the colony of Maryland, and extending to the year 1832. The books I placed in the Library, and in return transmitted to the Executive of Maryland, through the same channel of communication, a full set of Hammond's Reports."

This was probably the first exchange of Court reports between any of the States of the Union.

In 1835, the books added to the Library were selected by John C. Wright and Frederick Grimke, who were then judges of the Supreme Court. The thirty-fifth General Assembly (1836-7) voted ex-members of the Legislature the privilege of taking out books, and the following year that privilege was bestowed upon the Superintendents of the Asylums for the Blind and for the Insane. The resolution authorizing ex-legislators to draw books was offered by William V. H. Cushing, member of the House for Clark county.

The accessions to the Library in 1837, were made under the superintendence of a committee appointed under a resolution offered in the Senate by George Sharp of Belmont, chairman of the standing committee.

The committee consisted of Joseph Vance, Joseph R. Swan, Noah H. Swayne, Frederick Grimke, and Anthony S. Chew. The resolution passed March 22, 1837.

No catalogue of the selections made was reported. The amount expended was \$1,000. That sum was appropriated each year from 1837 to 1840.

On the 23d day of March, 1841, William I. Thomas, Senator, representing Miami, Darke, Mercer and Shelby counties, moved that the Librarian

be authorized to enlarge the Library by attaching to it a room adjoining, on the north.* The enlargement thus asked for, was granted, and Mr Mills expended \$133 32½ in fitting up the new room, which sum was paid out of the Treasury, after a committee appointed to inquire into its justice, in 1841-2, had reported in favor of it.

The first restrictions upon the circulation of books, under the general law and the resolutions extending its provisions, were made by the thirty-ninth General Assembly. On motion of Mr. Thomas of Miami, the Librarian was required to keep one set of the State Laws and Journals at all times in the Library.

Aaron Johnson, Senator for Perry and Morgan counties, on the 6th of February, 1844, in answer to a resolution which had been referred to the standing committee on the Library, made an elaborate report upon the necessity of having full sets of United States Court Reports, and of all State Court Reports. He notified the Senate that 31 volumes U. S. Court Reports, and 290 volumes State Court Reports were wanting, and recommended an appropriation of \$1,605 for the purchase of them. His recommendation was not accepted.

Zechariah Mills, who had been Librarian seventeen years, was succeeded, in 1842, by Thomas Kennedy. No other event of special interest marked the history we are now tracing till 1844. Meantime, the appropriations were expended under the directions of the Governor, and the number of books, which in 1824 was 1,717, had increased to 8,172. The number of accessions, at different periods, is shown in the following statement:

GROWTH OF THE LIBRARY FROM 1824 TO 1844.

No. of books in 1824.....	1,717
No. of books added in 1824, 1825, and 1826.....	842
“ “ 1827 and 1828.	740
“ “ 1829.....	237
“ “ 1830.....	319
“ “ 1831.....	252
“ “ 1832.....	269
“ “ 1833, 1834, and 1835.....	933
“ “ 1836.....	315
“ “ 1837.....	617

“ 1824 to 1844.....	10,458 65½
Total expenditures for the increase and preservation of State Library, as far as reported, from 1817 to 1844.....	\$12,636 32½

THIRD PERIOD—1844 to 1853.

An era was marked in the history of the Library by the Legislature of 1844-5. A law was then passed which placed it under the care of a Board of Commissioners consisting of the Governor, the Secretary of State and the Librarian. That Board was given power to adopt rules and regulations, and to superintend all expenditures. It was charged with the control of the sale of the reports of the Supreme Court, * and all extra copies of statistics and other documents not advisable to be preserved in the Library—the proceeds to be applied for the increase and preservation of the Library—was authorized to exchange Laws, Journals, Documents and Reports with other legislative bodies, States and Libraries—and was required to report to the General Assembly annually. All persons were permitted to visit the Library and examine and read the books, and members and ex-members of the Legislature, judges of the Supreme Court, and officers of the State were allowed to take out books under the regulations established by the Commissioners, but no public officer had the right to give any other person an order to take out books. This restricting clause in the law, suggested by the Librarian, was made necessary by abuses, which had rendered the Library a "circulating institution."

No term of office was fixed for the Librarian, nor was the amount of his salary stated. He was however voted \$400 for 1845.

The bill containing these provisions was prepared and brought before the Senate by Thos. W. Powell of Delaware county, who was chairman of the standing committee on the Library. It was introduced on the 17th of February, 1845. After a somewhat protracted discussion, it was referred to a select committee, consisting of John Coddington of Medina and Lorain, Levi Cox of Wayne and Moses Kelley of Cuyahoga. That committee reported it back, with amendments and recommended its passage. The question was very soon taken and the bill was sent to the House for its concurrence. It became a law on the 6th of March, 1845.

The Library occupied the attention of the General Assembly of 1844-5 more frequently than it had of any Assembly between 1824 and 1844. On motion of Moses Kelley, the standing committee was requested to inquire if broken sets of the journals of Congress might not be made complete.

*Then published by the State.

Mr. Powell, from that committee reported that the Congressional laws and journals, prior to 1815-16 (14th Congress) were not in the Library, and recommended a Resolution, which passed both Houses, that the Librarian be instructed to procure them.

On the 5th of March, 1845, David T. Disney Senator, from Hamilton county, offered a resolution which was adopted, that the Governor be requested to transmit to M. Vattemare of France, the laws, documents and journals of the State, with such specimens of natural history as might be furnished him for that purpose. This resolution was in answer to a memorial, Alexander Vattemare had addressed to acting Governor T. W. Bartley, from which it is proper to make the following extracts:

MEMORIAL OF M. VATTEMARE.

"Had the people of Europe an opportunity of learning your wise and salutary laws; the peaceful and yet powerful workings of your free government; your admirable institutions for the punishment of vice and the relief of honest poverty; the freedom of your religious views, and the universal means of education which you possess; your public works and public press, rivaling each other in public benefit; your immense national resources and the enterprising industry of your citizens. Could this knowledge but be diffused here, Europe would at once be forced to respect and admire you, and, while proud that your continent was peopled by her sons, receive her citizens as brothers—as equals in this civilized and enlightened age.

"This desideratum can easily be obtained. A few of the extra copies of the public documents, which I learn fill lumber rooms in many of your capitols; a collection of your laws; an extra copy or two of the works of your authors and editors, who I confidently assert, will cheerfully contribute them, and a collection of your minerals, and the work is accomplished. The veil of ignorance which shuts out your country from view will fall, and she will stand in the eyes of Europe in her true dignity and glory, illuminated by the blaze of intellectual light, ever radiated from the constellation of stars that deck her standard! She will be known. She needs but to be known to be appreciated, admired and respected.

"But your State will reap a rich reward for thus elevating the national character. The treasures which have for centuries been accumulating in

the vast store-house of European knowledge; the works of her artists, inspired by the master pieces of the world; the laws, founded on the experience of ages, which directs her vast governments, and protect her immense population, will be sent you with a profuse hand in exchange for what will cost you a mere trifle. Value, intrinsic value, will not for a moment be taken into consideration. *The Bulletin des Lois* (240 volumes,) have already been sent for a copy of the revised statutes of one of your sister States, and you may expect a similar prolific return; a rattlesnake or a lizard may procure a copy of the Venus de Medicis; a State map, the Geological map of France, published at a cost of 500 francs per copy, and not to be purchased. In short, while the first mentioned object will be gloriously effected, you will be real gainers by the exchange, and fill your State Library or the collection of your University, with what it would cost immense sums to purchase. Indeed, a large proportion of books and works of art thus to be obtained belong to government, and cannot be purchased. Upwards of four thousand scientific and useful works, maps, splendid engravings, a great number of medals, statues, etc., have already been presented to me by our legislative chambers, our ministers, city corporation, academies, universities, authors, artists and publishers, to be distributed in the United States in token of their sympathy, and in return for a few hundred books, maps, reports, pamphlets and engravings, brought by me from America, and distributed, in the name of the State, where they were presented to me, among our ministerial and public establishments."

The other acts of the forty-third Legislature, in which the Library was recognized, were in the granting of its privileges to the Teachers in the Asylums—authorizing the Commissioners to send laws and documents to the New York Historical Society, and electing a Librarian to succeed Thomas Kennedy. John Greiner was chosen to execute the new law, in conjunction with the Governor and Secretary of State, for three years from the 9th day of February, 1845.

The first report of the Commissioners of the State Library was presented to the Senate on the 16th of February, 1846. It was signed by Mordecai Bartley, Samuel Galloway and John Greiner. They reported that Ohio Reports and Statutes had been sold to the value of \$1,688 75, of which sum, for books and for contingent expenses, \$1,588 had been expended. The Commissioners made the following statement and recommendations:

"Your Commissioners have obtained, by personal application, and through the kindness of the State authorities of New York, a valuable addition, embracing ten volumes of the Natural History of that State, executed in a neat and substantial style. There has also been received from the General Government an elegant and valuable copy of Wilkes' Exploring Expedition, embracing five volumes. * * * *

"We would avail ourselves of this opportunity of suggesting to the General Assembly, the propriety and necessity of an enlargement of the Library. The present room is too small conveniently to contain the books now crammed in its shelves, and there are many books, embracing our Ohio Reports, which ought to be kept in the Library, and which cannot now, for want of a suitable place, be carefully preserved."

The forty fourth General Assembly, to which these suggestions were made, authorized the enlargement requested, raised the Librarian's salary from \$400 to \$500; and on motion of William L. Perkins, member of the Senate for Lake and Ashtabula counties, required him to keep not only one set of the laws and journals, but one set of Chase's Revised Statutes, and of Swan's Collated Statutes, at all times in the Library.

When the Commissioners made their annual report, February 1st, 1847, they notified the General Assembly that the enlargement and refitting of the Library had cost \$203 50. The Library then included what had originally been three rooms. The one occupied in 1846 was taken from the Quarter-master General, and was over the Executive office.

The Commissioners (the same as for 1846, excepting William Bebb, who had succeeded Mr. Bartley, as Governor), made this statement:

"The additions made to the various departments of the Library during this and the preceding year, have met the approval of the judicious; and the hope is entertained that, in a few years, by the increased amount of means which may reasonably be anticipated, the Library will become an ornament to the State.

"The geological and other specimens, property of the Ohio Historical Society, have been transferred to the care of the Librarian, and it is contemplated during the present year to obtain as large a collection as possible of the various specimens of art and science, and thus lay the foundation for a cabinet of curiosities, which may, by proper patronage, become a valuable accession and ornament to the State. Measures have already

been instituted to accomplish this purpose, and the co-operation of all who can aid this design by the contribution of specimens, is earnestly solicited.”*

The last paragraph quoted led Samuel A. Russell, member of the House, from Harrison county, in 1846-7, to offer a Joint Resolution, which was adopted—that the Librarian “be authorized to collect, conveniently and without expense, natural and artificial curiosities found or made within the precincts of Ohio.”

William Lawrence, member of the House for Logan and Hardin counties, offered a Resolution, that the editors of Columbus, and editors visiting Columbus, be allowed all the privileges of the Library. It was referred to the Library committee, and reported back with a recommendation in favor of it, but the House refused to adopt it.

In 1848, (Feb. 2,) the Commissioners made an elaborate report. Their transactions and views are set forth in the following extracts:

“The whole number of volumes purchased this year is 600; of these 189 are works on jurisprudence, consisting principally of American reports; the remainder, 411, embrace every variety of topic. The entire cost of the purchases since February 1, 1847, is \$1,362 87. The purchases for this year exceed those of any previous year, more than \$300. In the purchases for this year, special attention has been given to an increase of the law department of the Library, and especially to a fuller supply of American reports; of which all that were obtainable in the western market have been procured. It was deemed expedient, owing to the frequency of applications for books on law which were not in the Library, and to the importance of having a full collection of standard works in this department, to apply to that object a larger amount of funds than has hitherto usually been appropriated.

“The miscellaneous works have been chosen with a view to meet the various tastes and pursuits of those who have the use of the Library, and to secure the most recent and meritorious publications in each department of literature, science, and the arts. In making selections it has been our practice to avail ourselves of the intelligence of those most familiar with the different departments of knowledge, and we would be gratified to

* The cabinet then collected, and many curiosities since presented the Library, have been as carefully preserved as circumstances would permit, and will be properly exhibited when the Library Room in the State House is finished.

receive from the members of the Legislature, any instruction or advice as to the policy which has been pursued, or in regard to any other mode by which the character and interests of the Library may be efficiently advanced.

"There are more than 10,000 books in the Library; of these, nearly 2,000 have been added within the last three years. It is believed that with our present and prospective means, in a few years our State will be supplied with a Library which will fully meet the necessities of the advancing intelligence of her people.

"It has been suggested that a different classification of the books should be made. This will be done in the spring, and would have been effected before this time, but as a great many new works had been purchased during the last three years, it was deemed expedient to keep them separate from the others, so that those interested might see what amount, and the character of the accessions which had been made. We have commenced a correspondence with the Librarians of two of the most celebrated Libraries of our country, for the purpose of ascertaining their mode of arrangement, and we contemplate making the best classification possible, and to arrange our catalogue to suit the change. It has also been suggested that it would be better to complete the standard works in each branch of literature or science in order, without attempting, as is the present policy, a gradual and uniform, although comparatively imperfect supply of all. It is doubted whether such a plan would be acceptable, as those devoted to the investigation of a specific branch might deem its immediate and full supply to be more important than that of any other, and might consider any additions injudicious in which they did not equally participate. We have followed this suggestion in the law department because of the almost unanimous expression in favor of its enlargement to meet present necessities."

"We have commenced, as was intimated in our last report, to form, in common with the Library, a Cabinet, which shall embrace curious and interesting specimens in nature, art and science. But a few contributions have been received. As we have no funds to appropriate for the purpose, our exclusive dependence for success rests upon the liberality of those interested in the project. Several individuals have promised their aid and co-operation in the attempt, and we entertain the hope that many more

will yet appreciate the importance of the enterprise, and give us efficient assistance.”*

The General Assembly to which these paragraphs were addressed, did not take special notice of the Library, but its successor, the forty-seventh Assembly, (1848-9) authorized the Librarian, on motion of Andrew H. Byers, of Wayne and Ashtabula counties, chairman of the Library committee, to ascertain the cost of a set of the Journals of the State prior to 1807-8, and to procure additional copies of volumes 2d and 3d of the laws. On motion of C. B. Goddard, of Muskingum, the Governor was requested to correspond with M. Vattermare, and report to the next General Assembly what exchanges of documents and curiosities could be made with France.

Mr. Byers' resolution was the result of an inquiry to which Samuel Galloway, as Secretary of State, had replied as follows:

“It appears, from the last published catalogue, that all the Journals of the Senate preceding the session of 1807-8, and the Journals of the three sessions of the House of Representatives, are missing. I have inquired of those who have acted as Librarians for many years, but could not ascertain *how* or *when* the copies designated were lost. The series of laws is complete, although there is but a single copy of volumes 1, 2 and 3. Efforts have been made, without success, to supply the deficiencies in the catalogue of Journals, and to obtain additional copies of those laws of which there are now but one or two copies in the Library. There are but two or three individuals within our knowledge who have complete sets of the Laws, and but a single person who has an entire set of the Journals of the General Assembly. One of the individuals who has a complete set of the laws, was willing to sell, but would not take less than \$200 for the series. We considered the price too large, and declined the purchase. The gentleman who owns the entire set of Journals, has uniformly declined, when requested, to set a price upon the series, although he has expressed himself as willing to sell. How, when or where those sets of Journals and Laws were obtained, or how long they have been possessed by the present owners, is not known. It is probable that there are in different sections of the State, many entire sets of the Laws and Journals and separated copies, which could be had on reasonable terms, if the fact that they are in de-

* The present Commissioners renew that hope.

mand was generally known. It may also be appropriate to remark, that with all the care and diligence which has been exercised, important laws and documents are annually lost”*

The Commissioners of the Library, then Seabury Ford, Governor; Samuel Galloway, Secretary of State; and John Greiner, Librarian; reported on the 13th of March, 1849, as follows:

“The whole number of volumes purchased and received in exchange is 573. The entire cost of the books obtained is \$1,136 28. We have endeavored as much as possible in our purchases, to supply the deficiencies in the different departments of the Library, and to procure works necessary to complete the series in different publications. As books in the law department are more needed and consulted than those of any other kind, special care has been used to obtain popular works on jurisprudence, and especially complete sets of the reports of the different States.

“It has been our aim to select the most substantial publications in the various departments of literature, of science and the arts, such as would be appropriate to the members of the General Assembly for reference and research. * * * * *

“In accordance with the suggestions of members of the last Legislature, and other friends of the Library, a new classification of the books has been made. With the existing arrangement, any one, unaided, can intelligently examine the Library and form an opinion of its character.

“We avail ourselves of this opportunity to acknowledge the generosity of Col. Johnson, of Piqua, who has given to the Library interesting geo-

* For the purpose of illustrating the difficulties which have met Librarians in endeavoring to comply with Resolutions requiring sets of Ohio Journals, Laws and Documents, and of Journals, Documents and Reports of Congress to be made complete, it may be proper to quote here a paragraph from the Report of the Library Commissioners for 1857, and to state that they have not been able to supply the deficiencies exposed :

“It is the design of the Librarian, if the General Assembly deems it proper, to make an appropriation for such a purpose, to arrange in an appropriate style of binding, six sets of the Ohio Laws, Journals and Documents. There is now but one complete set of Laws in the Library, and one set of Journals (excepting Senate Journal for 1802-3). We have one set of Territorial Laws, but none of the Journals. These will be obtained the coming year, if possible

“Of United States Documents, Laws, Journals, Annuals and Reports, we have, of some years, duplicates; of other years, incomplete sets. Many volumes of interest, published by the Federal Government, have never been sent to the Library. It is designed to make a complete list of what is on our shelves, and make application to our Senators and Representatives, and to the proper Federal officers, for the volumes which we have not.”

logical specimens obtained in California. We have also received from Dr. Butterfield, of this city, a liberal present of 8 volumes quarto of the lectures of Cardinal de Lucca; and from Mons. Vattemare, a very valuable donation consisting of 28 volumes of a highly popular work on the National Industry of France.*

"We earnestly renew the request heretofore given, that all who can will aid in the attempt to establish, in connection with the Library, a Cabinet of specimens, illustrative of ancient and modern arts and sciences. All will admit that a department of this kind, well organized and vigorously conducted, would subserve valuable purposes, and be an interesting acquisition to the State. All that is needed to hasten the success of the enterprise, is a general knowledge of the fact that an effort of the kind indicated has been commenced. There are many persons who possess curious and interesting specimens and collections, who would be gratified to place them in a public position, where they would receive the attention of the intelligent and scientific. We desire that our effort and object may be communicated, that we may obtain the contributions of such persons, and we cordially invite the co-operation of all who regard the attempt as laudable and meriting patronage." †

The Commissioners made their annual report to the Legislature of 1849-50 on the 9th day of February. Its important paragraphs were as follows:

"The entire cost of books purchased since last report, is \$720 17. It was intended, in accordance with the advice of many specially interested in the prosperity of the Library, to increase largely within the past year, the law department, by the purchase of all standard works on jurisprudence with which we are not supplied. Our full design could not be

* The exchange urged by M. Vattemare in his memorial, which has been quoted, and auspiciously begun by the presentation here mentioned, has not been regularly maintained, because, according to a communication from M. Vattemare to the Commissioners of the Library in 1858, the journals, laws and documents of Ohio have not been sent him. A box of books was forwarded him in 1858, through the Smithsonian Institution, and no doubt valuable return will be made for it. Another will be sent him in 1859. The Commissioners will be glad to receive from publishers, authors and others, books and pamphlets for M. Vattemare's International Exchange.

† This quotation is here given in order that the purpose for which it was made in 1849 may be promoted in 1859.

accomplished, as none of the Commissioners, owing to the prevailing sickness and other causes, could give his attention to the matter, and visit those places where are the fullest collections of such works. We have, however, been successful, by purchases here and in Cincinnati, in obtaining the books most needed, and especially in completing the series of American Reports. As works in law are more needed for reference and research than any other class of books, it is deemed to be specially important to place this department in a commanding position, and to afford the fullest facilities to the Bar, Bench, and General Assembly. It has been our aim to select the best and most substantial productions in the different departments, and thus to render the Library most useful to those who are specially entitled to its benefits. All suggestions and recommendations of measures or improvements by which the character and advantages of the Library may be enhanced, will be at all times acceptable.

"We would suggest, as a suitable and necessary change, that the room now occupied as the office of the Board of Public Works, be added to the present room, and thus that the entire space on the second floor be used for the accommodations of the Library. The room now occupied is too limited even for present wants.

"The Librarian was authorized by joint resolution, passed at the last session of the Legislature, to ascertain, by publication and correspondence where and at what price, certain laws and journals could be obtained. There is but one person known to possess the desired documents, and he has declined fixing any price upon them. It is certainly very important that these books should be secured, and it is believed that the Library committee of either branch of the General Assembly might be able to effect the purchase. The Librarian will be ready to co-operate in any measure which may be desired to effect this object."

The Legislature did not, for 1850, impose any special restrictions or assign any new duties to the Librarian, and the General Assembly of 1850-1 passed but one resolution respecting the Library—giving, on motion of Senator Wm. Lawrence, of Logan county, the members of the State Board of Agriculture and its Corresponding Secretary, the privilege of taking out books.

On the 15th of March, 1851, John Greiner was re-elected Librarian for a term of three years. He resigned in a few weeks after his election, that he might accept an appointment from the General Government, as Indian

Agent to New Mexico. Mr. Greiner's successor was Elijah Hayward. He was appointed by Gov. Reuben Wood, and entered upon the discharge of his duties in April, 1851.

The Library Report for 1851 was made on the 10th of January, 1852. It was signed by Rueben Wood, Governor; H. W. King, Secretary of State; and Elijah Hayward, Librarian. The portions of it, appropriate for quotation here, are:

"The whole number of volumes added to the Library, since the date of the last report, is above 850. Of this number, 125 have been added to the Law Department, the remainder are miscellaneous works, embracing a great range of topics. Most of them standard works which add greatly to the value of the Library. These additions do not include works which have been received by the way of exchange from other States. Considerable additions have also been made to the periodical literature of the Library, as also some engravings of much value.

"Great inconvenience is experienced from the want of sufficient room for the proper display and arrangement of the books. This will necessarily be the case, to some extent, until more ample accommodations are provided by the new Capitol."

The complaint thus made led to the evacuation by the Board of Public Works, of the room in the North end of the Library building, over the Secretary of State's office, which was then devoted to the Law Department. Before the seventh annual Report of the Commissioners of the State Library was due, the people of Ohio had voted to receive the Constitution adopted in convention, at Cincinnati March 10th, 1851. The first General Assembly under that constitution met at Columbus January 1st, 1852. Denied by the Constitution the power of appointing a Librarian by joint ballot in convention of the two Houses, the Legislature deemed it expedient to re-organize the Board of Commissioners and more explicitly define their duties and those of the Librarian. Before giving the history of that law, or of the operations under it, a review of the growth of, and expenditures for, the Library between 1844 and 1852 will be presented.

FOURTH PERIOD—1853 to 1858.

The first General Assembly under the second Constitution, and the fiftieth in the history of the State, held two sessions. At the first, beginning on the 5th of January, and ending on the 3d of May, 1852, the only action respecting the Library, was the passage of a resolution, offered in the House, by Philander B. Cole, of Union county, allowing the clergymen of Columbus, who officiated as chaplains in the Legislature, the privilege of taking out books—a privilege which has since been regularly continued. Geo. W. Houk, Representative from Montgomery, suggested an inquiry whether “a new arrangement of the Library was not necessary,” and Senator Jonathan I. Tod, of Trumbull county, offered a resolution requiring the Librarian to make a catalogue of the books, maps and pamphlets, embodying a brief history, with all the laws and resolutions

in force respecting the Library, to be submitted to the Secretary of State, who was authorized to print ten thousand copies in the English and three thousand in the German language.

Both these propositions were referred to the standing committees. They were not reported back.

The standing committee in the House consisted of—

Philander B. Cole, of Union;

Dexter Damon, of Lake;

William Morgan, of Muskingum;

Franklin E. Stone, of Trumbull;

Noah M. Humphrey, of Summit.

In the Senate, of—

Rankin Walkup, of Miami, Darke, and Shelby;

William Mungen, of Hancock, Wood, Lucas, Fulton, Henry, and Putnam;

Samuel E. Hibben, of Ross and Highland.

The adjournment, taken May 3d, 1852, was to November 15th, following. The subject of "the reorganization of the Library" was brought before the House by Geo. T. Barnum, of Cuyahoga county. On the 14th day of December, 1852, he introduced "House Bill No. 197, for the reorganization of the State Library, and to provide for the appointment of Librarian," which was read the first time. The next day it was called up, read a second time, and referred to the standing committee.

The provisions of the bill as introduced are not stated here, because they are not reported in the House Journal, and the original bill is not among those preserved and bound in the Library files.

On the 20th of December, Mr. Cole, from the standing committee, reported Bill 197 back, and recommended that all after the enacting clause be stricken out, and an amendment upon which the committee had agreed, inserted in its place. The bill was laid on the table, and the amendment was ordered to be printed. On the 23d of December the Library Bill was made the order for the day, and was committed, with the pending amendment, to the committee of the whole House. It was not reached, however, until the next day, when it was discussed, and, on motion of Joseph G. Gest, of Greene county, referred back to the standing committee "with instructions to report a bill revising the whole subject." Mr. Cole, from

that committee, reported on the 14th of January. The amendments agreed upon by the committee, made the term of the Librarian two years; required his bond to be ten thousand dollars; specified that he could only be discharged from office by the General Assembly, by resolution, "for sufficient cause, to be stated;" required an annual report to be made to the Governor, and specified that said report should be communicated to the General Assembly with reports from the executive departments. In addition to those amendments, the following sections were added to the bill:

"Sec. 6. That the State Library shall be under the management of a Board of Commissioners, consisting of the Governor, Secretary of State, and State Librarian.

"Sec. 7. That the Commissioners of the Library shall have power to adopt any rules and regulations proper or necessary for the preservation, regulation and increase of the Library, not inconsistent with the law which the Librarian shall, in all things, observe, and to superintend and direct all expenditures of appropriations made for the Library.

"Sec. 8. That the said Board of Commissioners shall control the sale of the reports of the Supreme Court, and all extra copies of statistics, and other documents not otherwise appropriated, or otherwise advisable to be preserved and kept in the Library; and for the purpose of making such sale, the Commissioners may appoint a suitable person, upon such terms as they shall deem best, from whom they shall take a bond with satisfactory surety, conditioned for the faithful performance of his duty, and paying over the proceeds of sales made by him; and the Commissioners shall apply the proceeds of such sales to the increase and preservation of the Library.

"Sec. 9. The Commissioners shall direct the Librarian to exchange statutes, journals, legislative documents, and other books, with other legislative bodies and librarians as they shall deem proper.

"Sec. 10. All persons shall be permitted to visit the Library, and examine and read the books there, without taking the same therefrom, under such regulations as the Board of Commissioners shall prescribe. Members and ex-members of the General Assembly, judges of the Supreme Court and Court of Common Pleas, officers of State and their clerks actually engaged in the service of the State, shall have free access to the use of the books of the Library, and have the liberty of taking the same out, under

such regulations as the Commissioners may determine; but no public officer or other person having a right to take books out of the Library, shall have the authority to give any other person an order to take books out of the same; if any person having such right, shall give such order, or otherwise obtain books out of the Library; to be used by any other person not having such rights, such person shall thereupon forfeit all rights to take books therefrom."

These amendments were all agreed to, and on the next day the bill was read a third time. On motion of Henry Bishop of Hancock county, "clerks and Sergeants-at-arms of the General Assembly" were then mentioned in the clause specifying the persons entitled to take books out of the Library. The bill was passed—63 yeas—nays none.

On the 17th of January, House bill 197 was read a first time in the Senate. The succeeding day it was read a second time and referred to the standing committee, which reported it back with one amendment, on the 20th of January. It was committed to the committee of the whole, was taken up the next day when the committee's amendment was disagreed to, and on the 22d of January it was read a third time and passed, yeas 22—nays none. It received the signatures of the presiding officers and became a law on the 27th of January, 1853. Its most important provisions have been indicated in the amendments sketched. *

The other acts of the fiftieth General Assembly, at its second session were the adoption of a Resolution on motion of Harvey Rice, Senator from Cuyahoga county, again authorizing the Governor to send journals, laws and documents to M. Vattermare, and granting the north room in the Library to the Supreme Court.

No Reports of the Commissioners of the Library for 1853 or 1854, were preserved in the Library. They were not included in the volumes of Documents ordered to be printed. Consequently no detailed history of the transactions of the Commissioners can be given for those years.

The only special notice taken of the Library by the General Assembly, in 1854, was in the passage of an act introduced by William Lawrence, from Logan county, requiring the Librarian to bind all newspapers and periodicals sent to him for the use of the State.

* For the law see Swan's Statutes edition for 1854, page 549.

Ohio Laws vol. 51, page 320.

Curwen's Statutes vol. 3, page 2121.

In May, 1854, Elijah Hayward was succeeded as Librarian, by James W. Taylor, by appointment from Governor William Medill. In his report on behalf of the Commissioners for 1855, dated January 2d, 1856, Mr. Taylor made the following exposition:

"The State Library contains 17,094 volumes, according to the register, but this enumeration includes the law and miscellaneous departments. There is a large quantity of laws, journals, and documents of the General Assembly which are duplicates; and unbound pamphlets have usually been entered on the register. The latter are now mostly bound into volumes, which in turn have been numbered, but without keeping up the full aggregate of volumes. Since May 13th, 1854, when the present Librarian assumed the charge of the State Library, the number of volumes has increased from 14,988 to 17,094, an addition of 2,106 volumes.

"The Librarian found the manuscript returns of the Deputy Marshals employed to take the census of 1850, unavoidably exposed to loss and confusion. Every examination, however casual, was sure to disarrange them. His first care was to arrange the sheets by townships, towns and counties, but he at length concluded to bind them securely as a contribution to the statistics of the State, which every successive year will render more valuable. Fifty years hence many questions of succession to property may depend for adjustment materially upon a contemporaneous record of the name, age, birth-place, family relatives, etc., of every man, woman and child in Ohio in 1849-50, aside from any other value which such a domestic day-book may possess. It is recommended that the National census of future periods should be preserved in the same manner.

"Among the re-bound documents are included the collated reports, etc., of the different State departments from 1836 to 1851, when the size and style of those documents were changed. Their arrangement was difficult, and some omissions may have occurred, but it was believed that even the partial execution of the design would tend to public convenience. Five volumes are occupied with the Auditor's reports and communications during the period in question; four by those of the Board of Public Works; two with Governor's Messages; two with agricultural reports, besides many single volumes."

"An interesting donation was made by Charles Hosmer, Esq., of Hartford, Connecticut, of complete files of the Connecticut Mirror, published by that gentleman at Hartford, and edited by Theodore Dwight, from 1809 to

1822, a valuable addition to the historical materials of the Library. There are no volumes which are consulted more frequently or eagerly than bound newspapers, especially of early dates. The Librarian is solicitous to obtain copies of all newspapers, even if the files are imperfect, which were published in Ohio prior to 1830 ; and the members of the General Assembly are respectfully invited to furnish any information which will aid him in making such a collection.

"Measures have also been taken to preserve every pamphlet printed in the State, no matter what the topic thereof may be. Every such publication which has been found, is gathered into a series of volumes styled 'Ohio Pamphlets.' The collection is as yet limited, however, and publishers are urged to send whatever may be issued by them in this fugitive form, for preservation in the State Library.

"The Miscellaneous Department of the Library, when removed to a place of security, will warrant very considerable extension. Its divisions of History, Biography, Travels, and even Theology, are superior to those relating to Natural or Political Sciences, Commerce, etc. The present condition of the State seems to suggest that whatever works may in any degree contribute to the development of our physical resources, should now be accumulated for general reference at Columbus."

On the last day of the month of May, 1856, James W. Taylor's term of office having expired, the present Librarian was appointed by Governor Salmon P. Chase. For the guidance of the Commissioners of the Library, no action was taken by the fifty-second Legislature, which demands record here.

The Library was removed from the ancient building on High-street, to two rooms in the State House, opposite the Treasury,* in the second week of May, 1856, and in the second week of January, 1858, was, with the furniture and cases that had been used in the old rooms over the public offices, removed to the Library Room in the State House, where it now invites legislative authority for permanent alcoves and thorough classification, with a largely increased catalogue of books in several important departments.

It has been the prime object of the present Commissioners to prepare the Library for permanent classification. They have, therefore, expended the larger portion of the appropriations made in 1857 and 1858, in the

* The Law Department having previously been removed to the room opposite the Hall for the Supreme Court, where it now is.

purchase of complete sets of standard works in the General and Law Departments, and for binding and stamping* books. They have confined their recommendations to the necessity of enlarging those departments which are most properly characteristic of a State Library, and have urged most especially the every-day need of a complete catalogue.

The catalogues that have been published were by—

OHIO STATE LIBRARY.

COMMISSIONERS' REPORT FOR 1858.

To the General Assembly of the State of Ohio:

When the Report of the Commissioners of the State Library was made for 1857, the books were temporarily arranged in two rooms in the south wing of the State House, opposite the Treasury. In the second week of January, 1858, they were removed to the Library Room, in the second story in the north wing, opposite the Senate Chamber. The State House Commissioners put up two rows of shelves in the south-west corner, for the accommodation of laws and documents from other States. The other departments of the Library were placed in the cases which had been used in the old rooms over the State offices, which stood on High-street. A classification of the several departments, as perfect as the limited shelving would permit, was carefully made. All the books were arranged under it, excepting Congressional documents, and reports and documents from the English government rarely consulted. These were deposited, with duplicates of Ohio and other State documents, in the store-room above the Library hall.

On the 15th of November, 1857, the Library account with the State Treasury stood thus:

Balance of appropriation for moving and binding.....	\$501 02
“ “ purchase of books, &c.....	113 44
“ “ “ law books.....	1,495 00
“ “ contingent expenses.....	109 14
Total.....	\$2,218 60

APPROPRIATIONS FOR 1858.

For purchase of books, magazines, and binding.....	\$500 00
“ contingent expenses.....	200 00

LIBRARY FUND FOR 1858.

For moving and binding.....	\$501 02
“ purchase of books, magazines, &c.....	613 44
“ law books.....	1,495. 00
“ contingent expenses.....	309 14

Total.....	2,918 60
------------	----------

Expenditures during the fiscal year ending November 15, 1858 :

For moving library and binding books.....	\$476 01
“ purchase of books, magazines, &c.....	597 53
“ law books.....	75 42
“ postage, messenger, &c.....	308 83

Total.....	\$1,457 79

A proposition from Follett, Foster & Co., of Columbus, to take Ohio Reports for binding library books was accepted.

Binding has been done, of books which required re-binding to preserve them from destruction, to the amount of \$700, at five per cent. discount from the ordinary prices for work of the same style.

Follett, Foster & Co's order has been accepted on that account for

Total value. \$144

Leaving a balance to be paid in Reports at \$2 40 per volume, for which the books are subject to their order.

The styles of binding decided upon as best adapted to the Library were those which have been most widely approved by experienced Librarians. A writer for the British Museum said:

"The binding of books forms a very important item in the economy of a public Library. The great desideratum for the mass of books is strength and durability at the least possible expense. In a Library like that of the British Museum, it may well be imagined, there is abundant opportunity for testing the various styles of binding and kinds of leather, so as to arrive at the most correct judgment upon this point. The general plan now adopted is as follows:

"All dictionaries to be full bound in russia; other works likely to be in frequent use to be half-bound in morocco, with cloth sides; two or more volumes of same works are always bound together where their bulk will permit it. Pamphlets are half-bound in roan, with paper sides. Experience has shown that this plan is in every respect the most economical that could be adopted."

This is the plan adopted for the State Library.

A larger number of reports, laws, documents and journals has been sent to other States the past year than customary. The exchanging of reports, documents, journals and laws with other States, was carried on until this year, between the Executive department and the Secretary of State, the Governor receiving from other States, and the Secretary sending out the Ohio documents.

It was deemed proper that this business should all be attended to in one department, and the Librarian assumed the responsibility.

He has given attention not only to sending the documents and reports for the current year, but to making such exchanges with other States as would secure volumes wanting on our shelves. In the Appendix to this report what has been done is shown.

The exchange established in 1857 with Canada has been especially valuable. Thirty-four volumes were received in 1858, several of which are of unusual interest. Among these may be mentioned "The Relations des Jesuites."

A very important service was rendered to early North American history by the Canadian government, which caused to be reprinted the forty volumes constituting the collection. This work had become rare and costly; very few copies of it were possessed either by public libraries or individuals. The Parliamentary Library of Canada, before its destruction by fire

in 1854, possessed a copy as nearly complete as any one known to exist. It was that accident which led to the present reprint. It includes all that was originally published as the *Relations des Jesuites*, and in addition, those of 1611 and 1626, the *Deux Lettres* of Le Mercier, written from Quebec in 1655, and the three of Lallemant, written from the same place in 1659. The full title of the reprint is "*Relations des Jesuites, contenant ce qui s'est passe de la Compagnie de Jesus dans la Nouvelle France. Ouvrage, publie sous les auspices du Government Canada. 3 vol., Royal 8vo.; Quebec, 1858. Vol. I. Embrassant les annees 1711, 1626 et la periode de 1632, a 1641. Vol. II. Embrassant les annees de 1642 a 1655. Vol. III. Embrassant les annees de 1656 a 1672, et une table analytique des matieres contenues dans tout l'ouvrage.*"

This year exchanges have been renewed with M. Vattermare of the International Exchange, Paris. In 1849 M. Vattermare sent to Ohio a package of valuable books, but none was sent in return. Last summer the laws, documents and journals for 1856 and 1857, together with Ohio statistics for 1857, and a complete set of agricultural reports furnished for that purpose by the Corresponding Secretary of the State Board of Agriculture, were forwarded to Paris, through the Smithsonian Institution.

With Astor Library, New York an important exchange has been opened. A catalogue of books offered in return, is printed in the Appendix.

Exchanges have been opened also with the

New York Historical Society.

Massachusetts do do;

New Jersey do do;

Wisconsin do do;

With Mercantile Libraries in New York, Boston, Philadelphia, Cincinnati, St. Louis and San Francisco.

The number of Books registered at the date of the last Report was—19,031.

The additions to the Library from all sources in the year ending Nov. 15, 1858, were:

By Purchase.....	405
By Donation.....	19
By Exchange	555
	<hr/>
	979

General Department on Register	597
Law " "	84
	<hr/> 681

It will be observed that the number of volumes received by exchange exceeds the number purchased, by 150. This includes 298 volumes not enumerated in the Register number.

The number now registered is 19,712. This number is deceptive. It includes all volumes worn out, lost or stolen, and pamphlets which have been bound in volumes. The actual number of volumes now in the Library is not over 18,000, of which 2,576 are in the Law Department.

Since our last Report the Law Library has been provided with permanent alcoves, and the books have been classified and conveniently arranged. A register of accessions and a Record of books taken out is kept there, and the rules are observed which govern the General department.

The Law Department is now composed of

1,419 58

A list of all the volumes needed to complete sets of the American Reports, is in the Librarian's hands, and efforts are being made to supply them by means of exchange. Such as cannot be obtained in that way, will be purchased, together with other books recommended by the Judges of the Supreme Court, and needed to complete divisions.

The two departments of the State Library, being now in opposite wings of the State House, some legislation is necessary to secure adequate attention and due responsibility in the Law department.

The purchases for the Library have been confined to standard books called for—to volumes required to make sets complete, and to such rare works of American general and local history as it was important to get, lest the opportunity be lost.

A complete set of the Ohio State Journal, Daily and Weekly, from 1838 to 1855, was bought for 18 volumes of Ohio Reports. This purchase was made because the sets in the Library were incomplete. It is designed to exchange the odd volumes for other valuable newspaper files, as fast as opportunity is offered.

The number of books on the Library shelves was increased, this year, by nearly 100 volumes, which were taken out between 1851 and 1856, and for reasons that are not known, detained until sent for. Careful examination of the record books for 1851, 1852, 1853, 1854 and 1855, led to their recovery. Efforts are being made to recover others still missing, that were charged to State officers and members of the Legislature previous to 1856.

The original manuscript of Lieut. Governor Medill's speech welcoming Louis Kossuth to the Capital, and the manuscript of Governor Kossuth's speech to the General Assembly, which were deposited in the Library in February, 1852, according to a resolution then adopted, but were not prepared for exhibition, have been appropriately bound, and may now be examined without danger of destruction.

In the line of curiosities, but one donation was made to the Library in 1858; that was the Extra issued in Philadelphia, April 24th, 1775, on the reception of the news of the battle of Lexington. It was deposited by James Claypoole, Esq., of Columbus.

Charles Whittlesey, of Cleveland, deposited a geological map of Ohio in sections, which shows the geological divisions on the surface, and the position of the various strata beneath. It is frequently consulted. Such a map, showing the surface elevations as well as geological divisions, might be constructed of durable material and would be of much value to many persons who visit the Library.

The thanks of all persons who visit the Library are due the publishers of three daily, one tri-weekly, and thirteen weekly newspapers, which have been regularly sent gratuitously. A list is given in the Appendix.

Special acknowledgments are due the publishers and editors of Cleveland. Three daily and two weekly newspapers published in that City, have for several years been regularly donated. Files of the *Cleveland Daily Herald* from 1841 to 1859, gratuitously furnished by the proprietors, are now in the Library.

The trustees of the New York State Library, in their report for 1857, suggested to the Legislature of that State the propriety of applying to Congress for the passage of a law which shall require authors who obtain a copyright of their works, to deposit a copy in the State Library of the State in which the copyright is entered; or if there be no State Library, in such public institution as the Legislature may direct. This suggestion the undersigned Commissioners approve. They hope the attention of our Senators and Representatives in Congress will be called to it. A copyright department in the Ohio State Library would be a benefit to our authors, and to literature by rendering all their works accessible to students.

The Finance Committee which reported to the General Assembly in 1857, complained that no regular system of accounts had ever been kept in the Library. It might have added that no regular system of cataloguing and registering had ever been followed.

An effort has been made to provide, in a systematic form, for these important wants. A series of registers, records and account books has been prepared, after counsel with several of the most experienced Librarians, which may be described as follows:

A Delivery Journal, in which every book, taken from the Library, is acknowledged by the person who draws it.

Delivery Ledger, in which an account is kept with State officers and ex-members of the Legislature, who have a permanent or long continued right to draw books.

Accession Register, in which every book which comes into the Library by purchase, exchange or donation, is recorded, with its accession number, date of reception, name of publishers, place of publication, date of publication, style of binding, size, number of pages, and department to which it belongs.

Suggestion Record, in which the title, cost, name of publisher, place and date of publication, and size of books, which any one may suggest for the Library, or to which the Librarian may wish to call attention of the commissioners, are kept.

Binding Record, in which the title, number, and style of all books sent

to a binder, with cost of binding, and the time when sent and returned, are recorded.

Donation and Exchange Record, showing what and where books are sent for exchange, and what are received through exchange or by donation.

Commissioners' Record, showing the proceedings of the board of Commissioners.

General Account Book, showing debit and credit with appropriations, contingent fund, and Ohio Reports.

Journal, in which all transactions are recorded for transfer into the General Account Book.

In addition to these books, one of individual accounts is kept.

A recent article on the management of Public Libraries, by E. Edwards, the Librarian of the Public Library, Manchester, England, contained the following paragraph :

"In the formation of a Public Library, the first concern of the founders should obviously be to acquire a distinct conception of the aims with which it is established, and of the studies which it is intended principally to facilitate. To a great National Library, indeed, all sorts and varieties of books are welcome; but a Library of this kind is rather a growth than a formation. The chief Libraries of a country ought, unquestionably, to be encyclopædical, because even the 'trash' of one generation becomes the highly prized treasure of another. What a Bodley, at the end of the sixteenth century, calls 'riff-raff, which a Library-keeper should disdain to seek out to deliver to any man,' a Bodley's Librarian has to buy almost for its weight in gold at the beginning of the nineteenth century. For, by that time, it comes to be apparent that the most obscure pamphlets, or the flimsiest ballad, may throw a ray of light upon some pregnant fact of history, or may serve as the key to a mystery in some life-career which gave to an age its very 'form and pressure.'"

Believing this to be a sound doctrine, the Librarian has prepared durable covers for preservation of the current periodicals which are received, and also a series of pamphlet cases, in which, in classified order, may be kept safely, reports and pamphlets now valuable, as well as those which shall hereafter possess historic interest.

The last catalogue of the Library was printed in 1849. Then the number of books registered was, according to the Commissioners' Report, about 10,000. That catalogue is of no service whatever now; a working cata-

logue is daily needed, and one ought to be published as soon as the permanent alcoves are constructed, the several departments properly extended, and the books classified; because, as remarked by an experienced Librarian, a good catalogue is a prime necessity in a well conducted Library.

It is proposed to arrange the Library as far as practicable, upon the decimal system, suggested by Dr. Nathaniel B. Shurtleff of Boston, which has been adopted in the Boston Public Library. It gives not only a number for each book, but a shelf, press and alcove numbers also. This system, with many valuable instructions for cataloguing, registering and binding, is succinctly set forth in a work privately printed in Boston, of which the author donated a copy to the Ohio State Library.

The register, binding and account books which have been described, the plans for catalogues and plans for classification, together with plans for the management and protection of the Library, which can be shown in practice but are not easily put in print, are the result of investigations made by the Librarian during a visit to the Libraries of New York, Boston and Philadelphia, in the months of July and August last. The visit was made with the authority of the Board of Commissioners. Its usefulness was much enhanced by polite attentions and practical counsel from Dr. J. G. Cogswell, Librarian of the Astor Library, New York; C. B. Norton, Agent for Libraries, New York; Geo. H. Moore, Librarian of New York Historical Society; C. C. Jewett, Superintendent of the Public Library, Boston; Samuel C. Jackson, Acting State Librarian, Massachusetts; the Librarian of the Mercantile Library of Boston; the Librarian of the Historical Library of Massachusetts. W. T. Poole, Librarian Boston Athenaeum; Chas. Folsom, for many years Athenaeum Librarian, a gentleman of large experience, who takes deep interest in public Libraries; Ezra Abbott, jr., Assistant Librarian, Cambridge; H. J. Cross, Athenaeum Librarian, Salem, Mass., and W. J. Edmonds, Librarian Mercantile Library, Philadelphia.

A system of administration, carefully adapted from the practices of the Libraries which have been mentioned, will be put into practice as soon as permanent alcoves, thorough classification, and a working catalogue can be secured, to render it practicable.

Presuming that before another General Assembly shall convene the Library room will be furnished, and the classification can be made, and the

catalogue finished, the Commissioners recommend appropriations—

For purchase of Miscellaneous and Law Books.

To complete departments, especially American and Local History.

To complete the binding, which is necessary to fit the Library for new shelving.

To prepare and print a catalogue.

To fit up, classify and arrange the minerals and various curiosities now not properly exhibited for want of a convenient place.

To meet contingent expenses and pay salary of a messenger.

The library is now much too large for proper arrangement on the shelves in use. As exposed, it is subject to abuses and depredations which no watchfulness can entirely prevent.

The Architect and Commissioners of the State House have prepared a plan for new alcoves and furniture, which we think judiciously devised. We cannot too earnestly urge the making of such provisions as are necessary to cause it to be executed as soon as practicable.

SALMON. P. CHASE, Governor,
ADDISON P. RUSSELL, Secretary of State,
WILLIAM T. COGGESHALL, Librarian,

Commissioners of the Ohio State Library.

APPENDIX.

EXCHANGES.

ASTOR LIBRARY, NEW YORK.

The Laws and Documents of Ohio, under the second Constitution, were sent to the Astor Library, for which the Superintendent, Dr. J. G. Cogswell, notified the Commissioners that he would send to the State Library the following works:

Antiquitates Americanæ, by Rafn;
 Babbage on the Decline of Science;
 Bowring's Specimens of the Russian Poets;
 Browne's History of Jamaica;
 Democratic Review, vol. 14;
 D'Ewe's Autobiography and Correspondence;
 Force's National Calander, 1821-22, 1831 to 1836;
 Gales' Court of the Gentiles, 3 vols., quarto;
 Henry's Travels in Canada, 1750, 1776;
 Hosack & Francis' Medical Register, 4 vols.;
 Jeremy's Analytical Index of Reports. 1817-23, 1827;
 Parliamentary Reports, complete for the years 1830-31, 1831-2, 1833, 1846, 175 vols.;
 Reports from Committees, vol. 1-16;
 English Reports on Education;
 Small's Account of Kepler;
 Literary Gazette, vols. 1-5;
 Picket's New System of Architecture;
 Powell's History of Natural Philosophy;
 Repertory of Arts, Manufactures, &c.; 1st series complete, 16 vols.;
 " " " 2d " 1-29 vols.

This preceded the Repository of Patent Inventions, and is a very important work.

Sedwick & McCoy's Synopsis of the Classification of the Paleozoic Rocks and Fossils.

Shea's Discovery of the Mississippi.;
Shaler's Algiers;
Transactions of the Linnaean Society, vols. 1-3.

UNITED STATES.

Efforts to complete sets of United States Documents published before 1856, have been chiefly unsuccessful. The aid of members of Congress from Ohio is promised.

The Laws, Executive Documents and Reports for 1857, have been received from the Department of State. A list is not here given, because, for want of shelf room, they were deposited in the Library store room.

ALABAMA—1856-7.

Reports of cases argued and determined in the Supreme Court, by J. W. Shepard, vols. 27, 28, 29. Montgomery, 1856, 1857. 3 vols.

1858.

Acts of the 6th biennial session of the General Assembly, 1857, '58. Montgomery, 1858. 1 vol.

Journal of the 6th biennial session of the Senate, 1857-8. Montgomery, 1858. 1 vol.

Journal of the 6th biennial session of the House of Representatives, 1857-8. Montgomery, 1858. 1 vol.

ARKANSAS—1856-7.

Governor's Message and Documents. 1 vol.

SECOND ANNUAL REPORT

OF THE

COMMISSIONER OF STATISTICS.

The Annual Report on Statistics has been delayed, by the necessity of waiting for other reports, and the tardiness with which some among a large number of correspondents make their replies. In another year, I hope by earlier and more systematic arrangements, to be able to report on the day the legislature meets.

It is due to the county officers, and to numerous private individuals, to say that they have received my questions,—and when they could, answered them, with uniform civility, and a manifest desire to procure whatever useful information was sought. It is also due to the county officers to acknowledge the obliging manner in which they not only furnished the facts of record in their office, but went out of the way to ascertain what they could by inquiry.

In the present report I have avoided any repetition of the *permanent statistics* of the State, and sought only the *movement* in the business, social and productive relations, I have particularly directed my attention to—

1. The crops of 1858.
2. The elements and operations of railroads.
3. The distillation and consumption of liquors.
4. The exportation of Ohio.
5. Crimes and offences.
6. The inferior, defective and dependent classes.

There will be found in order, accompanied with all the tables, deductions and results which the facts authorize.

CLIMATOLOGY OF OHIO.—This is a subject which requires constant observation, in order to ascertain its law. Annexed will be found tables giving the annual phenomena of climate for 1858, taken at the Woodward High School, Cincinnati; at Steubenville, by Mr. Marsh, and at Marietta by Dr. S. P. Hildreth. As these are in different sections of the State, and taken by accurate observers, they will give a very good view of the climatic changes in the year past. Among these will be remarked several characteristics, of which the effect on the production of the State has been severe and disastrous.

1. The amount of *rain*, which fell from the 1st of November, 1857, to the 1st of November, 1858, by far exceeded the average. The *average* depth of rain for the State of Ohio for a long series of years is not more than 40 inches. Dr. Hildreth states that at Marietta, it is 42 inches; but, in the year ending the 1st of November, 1858, there fell at that place 57 inches, of which 12 inches fell in May! Dr. Drake states, in his "Picture of Cincinnati," that at that time (1819,) *nine* inches was the most which had fallen in one month. In the spring months of 1813, there fell *sixteen* inches, and in 1814 but *nine* inches. In the tables (1, 2 and 3) for 1858, we find the following results:

At Steubenville (in March, April and May,) 15.49 inches.

At Marietta " " " 18.42 inches.

At Cincinnati " " " 14.21 inches.

Although this was much above the average, it does not show the whole of the rainy season of 1858. This must be done by taking the usually dry summer months:

At Steubenville (in June, July and August,) 18.55 inches.

At Marietta " " " 15.83 inches.

At Cincinnati " " " 16.67 inches.

Thus, in six months, (from March 1st to September 1st,) there fell at Steubenville, 29.04 inches of rain; at Marietta, 34.25 inches; and at Cincinnati, 30.88 inches. This was at least ten inches of water beyond the average of three months, in this State. The average at Steubenville for ten years, as prepared by Mr. Marsh and published in the American Almanac, was 20.29 inches. The average at Marietta was not materially different. On examining these tables it will be seen that the great bulk of this extraordinary increase of rain fell in May and June, at the period when corn was to be planted, and the fruit of the apple, peach and cherry

was yet small and tender. To this cause perhaps more than any other is attributed by most of my correspondents, the reduction of crops and the destruction of fruit.

2. On the night of the 26th of April, occurred one of the severest frosts ever known in the southern part of Ohio. There is no doubt that this killed a large part of the fruit; but, if all which survived that frost had ripened, there would still have been a moderate crop of the larger kinds. Having addressed queries on this point to a large number of intelligent persons, I find that many, especially in the northern and eastern parts of the State, attribute the loss of apples and peaches more to heavy rains and easterly winds, than to the frost of April 26. The succession of rains after the frost, the cold winds accompanying them, and in several counties the small measuring worm completed the destruction which the frost had commenced.

3. Another, and quite remarkable phenomenon in this year, was the preservation and ripening of the peach in certain limited localities, while it was utterly destroyed in a large part of the whole valley of the Ohio. This phenomenon is so marked, as to be worthy of some investigation. The principal locality of this fact was in Scioto and Adams counties, near Rockville, and extending for about forty miles on the Ohio, including Manchester. From both Prottsville and Manchester—especially the former—large quantities of peaches were carried to the Cincinnati market, when nearly the whole country for hundreds of miles was destitute. Mr. Longley, who himself had extensive peach orchards at Rockville, says: "We had a superior crop of peaches. There were peaches along the river for thirty or forty miles below us." Their orchards were on the high bluffs in that part of the Ohio, and it is supposed by many persons, that the highest ridges are the best localities for this fruit. In the extensive orchard of Messrs. Howell & Penire, near Lebanon, (Warren county,) there was a small portion of the orchard in which the fruit ripened. The orchard is on a ridge, and the part which bore, the highest part of it.

4. The vineyards in Miami county, to which much attention has been directed, shared in the general disaster. The remarks of Mr. Robert Buchanan, of Cincinnati, (a distinguished Horticulturist,) in relation to the vine, and also to the *smut in oats*, (another unusual phenomenon,) deserves special attention. Mr. B. says: "The Vintage in this county has afforded a less average yield than for any previous year, and less by one-half, than

in 1857. It is the worst year we have ever had, and will not exceed forty gallons to an acre. This was owing to the very unfavorable and wet weather in May and June, causing mildew and rot. An average yield for a series of years, is estimated at about 200 gallons to the acre, which is said to be the product in France and Germany. It has been noticed, that the mildew this year was much more destructive to fruit crops, including the grape, on limestone formations than on sandstone, iron or shell lands. So also, with the smut in oats. In Adams county, Ohio, and on the Big Sandy, (Ky.,) the fruit, grape, and oat crops were fair. In Brown county, on hill sides, some good crops of oats have been produced this year—the formation, lime and chert, approaching to the region of a kind of sandstone, found in the corner part of Adams county.”

The suggestion made by Mr. Buchanan, that certain kinds of geological formations may tend to avoid mildew and smut, is very probably correct; but as the geological formations cannot be remedied, the fact, if it be so, affords us little relief. New modes of culture, in his opinion, afford as little. He says: “It has been suggested that wide planting and long pruning may prevent mildew and smut in the grape, but I can scarcely believe that any mode of pruning, either in the apple or grape, can be a remedy against diseases arising from atmospheric causes, nor that new modes of cultivation can arrest smut in wheat and oats.” The statistics of Meteorology given above, exhibit an ample cause for mildew and rust. They show that never before, had so much rain fallen at that particular season, when fruit, oats, and the grass, could be so easily injured. The farmers say that they never before saw smut so affect the oat crop—that neither had they seen such a cause for it. To trace this relation of cause and effect, and to record it from year to year, so that a general law may be established, is the office of Statistics, an office which can be performed by no other science; but whose results are among the most valuable of all knowledge—we may not avert the rain, but by knowing the successive changes to be expected, we may know how to provide against deficiencies.

Another branch of Climatology, is to observe and distinguish the native from the foreign plants, and especially those of the latter which have originated in a different climate. It is well known that a large number of the trees and plants now commonly cultivated, are natives of other countries, and some of them (such as the peach,) have originated in other climates. They may be successfully cultivated under favorable circum-

stances, but they can scarcely be as hardy as our own. On the other hand, trees and plants which come from such climates as are similar to our own, such as Southern Japan, may be transplanted here with entire success. To draw the distinction between native and foreign plants, it is necessary to know what plants were found in Ohio, when the whites first came here. For this purpose, I re-produce the catalogue of trees and herbaceous plants found in Ohio in 1810, (at least in Miami county,) as furnished by Dr. Daniel Drake, in the "Picture of Cincinnati," a work now entirely out of print. The author says it is not perfect, but it is the result of observations by himself and others, at that time.

1. FOREST OF THE MIAMI COUNTY.

Families.	Species.	Popular Names.
ORPHALANTHUS	<i>Occidentalis</i>	Button Wood
CORNUS	<i>Florida</i>	Dog Wood
"	<i>Candidissima</i>	Swamp Dog Wood
"	<i>Alterna</i>	Alternate-branched do.
"	<i>Sericea</i> , L.	Rose, or Red Willow
PTILEA	<i>Trifoliata</i>	Shrub trefoil
HAMAMELIS	<i>Virginiana</i>	Witch Hazel
VITIS	<i>Vulpina</i> , L.	Fox Grape
"	<i>Scrotina</i>	Fall Grape
"	<i>Labrusca</i> , L.	Winter Grape
HEDERA	<i>Quinquesfolia</i>	Ivy
ORANOTHUS	<i>Americanus</i>	New Jersey Tea
EUONYMUS	<i>Carolinensis</i>	Indian Arrow Wood
"	<i>Sempervirens</i>	Evergreen do.
CELASTRUS	<i>Scandens</i>	Staff Tree, or Bitter Sweet
LONICERA	<i>Virginiana</i>	Honeysuckle
RIBES	<i>Oxyanthoides</i>	Gooseberry
"	<i>Floridum</i>	Black Currant
ULMUS	<i>Americana</i>	Slippery Elm
"	<i>Mollifolia</i>	White Elm
SAMBUCUS	<i>Nigra</i>	Common Elder
"	<i>Canadensis</i>	Red-berried Elder •
VIBURNUM	<i>Prunifolium</i>	Black Haw
STAPHYLAEA	<i>Trifoliata</i>	Bladdernut Tree
REUS	<i>Radicans</i> , L.	Poison Vine
"	<i>Glabrum</i>	Sumach
"	<i>Typherrum</i>	Staghorn Sumach
"	<i>Copellina</i>	Lentiscus-leaved do.
"	<i>Susaeolens</i> , L.	Trifoliata do.
ÆSCULUS	<i>Flava</i> , L.	Common, or Fœtid Buckeye
"	<i>Maxima</i>	Sweet Buckeye
DIERA	<i>Palustres</i>	Marsh Leather Wood
VACCINIUM	<i>Stamineum</i>	Long leaved Vaccinium
LAURUS	<i>Sassafras</i> , L.	Sassafras
"	<i>Benzoin</i>	Spice Wood
CERCIS	<i>Canadensis</i>	Redbud
GYMNOCLADUS	<i>Dioecia</i>	Coffee Tree
HYDRANGÆA	<i>Hortensis</i>	Mock snow ball
PRUNUS	<i>Virginiana</i>	Wild Cherry
"	<i>Plum</i>	Several varieties
ORATAEGUS }	Several species	Several varieties of Haw
MESPILUS }		

FOREST OF THE MIAMI COUNTY—Continued.

Families.	Species.	Popular Names.
PYRUS	Coronaria	Crab Apple
ROSA	Parvi-flora	Varieties of Wild Rose
"	Lucida, L.	
"	Carolina, L.	
"	Palustris	
RUBUS	Fruticosus	Swamp Rose
"	Hispidus	Blackberry
"	Occidentalis	Running Blackberry
SPIRÆA	Opulifolia	Raspberry
"	Tomentosa	Nine Bark
TILIA	Americana	Downy Spiræa
"	Pubescens	Black Linden Tree
MAGNOLIA	Acuminata	Oblique-leaved do.
ANNONA	Glabra	Cucumber Tree
LIRIODENDRON	Tulipifera	Paw-paw—two varieties
BIGNONIA	Radicans	Poplar—yellow and white
ROBINIA	Pseud-acacia	Trumpet Flower
ABUTILUM	Hypericoides	Flowering Locust
MORUS	Rubra	St. Peter's Wort
BETULA	Nigra	Red Mulberry
BETULA ALNUS	Rubra	Black Birch
FAGUS	Ferruginea, L.	Common Alder
"	Castanea, L.	Beech
CARPINUS	Betulus Virginia	Chestnut
"	Ostrya	Hornbeam
JUGLANS	Nigra	Hop Hornbeam
"	Cinerea, L.	Black Walnut
"	Alba ovata	Butternut
"	Alba minimi	Shellbark Hickory
"	Alba odorata	Pignut
PINUS ABIES	Americana	Balsam Hickory
PLATANUS	Occidentalis	Hemlock
QUERCUS	Macrocarpa	Sycamore
"	Alba	Bur Oak
"	Prinos acuminata	White Oak
"	Prinos montana	Chestnut Oak
"	Cinerea	Mountain Chestnut Oak
"	Tinctoria	Upland Willow Oak
"	Falcata	Black Oak
"	Rubra	Spanish Oak
CORYLUS	Americana	Red Oak
TRUFA	Occidentalis	Hazlenut
SALIX	Nigra	American Abor vitæ
"	Sericea	Rough-barked Willow
VISCUM	Album	Osier
ZANTHOXYLON	Fraxineum	Mistletoe
SMILAX	Four or five species	Prickly Ash
POPULUS	Deltoidea	Greenbriar
"	Tremula	Cotton Tree
TAXUS	Canadensis	Aspen
JUNIPERUS	Virginiana	Canadian Yew Tree
ACEA	Saccharinum	Red Cedar
"	Glaucum	Sugar Tree
"	Pennsylvanicum	Red or Water Maple
"	Negundo	Mountain Maple
ORLIS	Occidentalis	Box Elder
DIOAPYROS	Virginiana	Hackberry
GLEDITSIA	Triscanthos	Persimmon
NYSSA	Sylvatica	Honey Locust
FRAXINUS	Americana, O.	Sour Gum
"	Sambucifolia, O.	White Ash
"	Quadrangularis	Swamp Ash
		Blue Ash

To this catalogue of the Miami County Forest, as exhibited in 1810, I add the following species of some of the leading families found in Ohio, furnished to me by James W. Ward, Esq. :

Families.	Species.	Popular Names.
QUERCUS	Imbricaria	Shingle Oak
"	Palustris	Swamp, or Pin Oak
"	Discolor	False Red Oak
"	Obtusiloba	(Post Oak) or Iron Oak
"	Bicolor	Swamp White Oak
"	Olivæformis	Mossy Cup Oak
"	Coccinea	Scarlet Oak
"	Prinoides (or) Chinquapin	Dwarf Chestnut Oak
"	Trilobe	Dwarf Black Oak
"	Leana	Not common. Hybrid (?)
"	Prenies	Swamp Chestnut
"	Ilhoifolia	Black Scrub Oak
PINUS	Banksiana	Sweet Pine
"	Strobus	White Pine
"	Inops	Jersey Pine
"	Nigra	Black Spruce
"	Rigida	Pitch Pine
PRUNUS	Pennsylvanica	Wild Red Cherry
"	Serotine	Wild Black Cherry
KALMIA	latifolia	Mountain Laurel

This last is evidently imperfect, being confined almost entirely to the southern part of the State. My object is to make a *beginning* only in a description of the Ohio forest.

Mr. Michaun says there are in the United States above thirty species of trees which rise more than 60 feet in height; and Dr. Drake asserts there are an equal number which rise to this height in the Miami county.

1. (B.)—POPULATION.

In my last report, (page 11,) I estimated the population of Ohio in 1857, at 2,368,000. The data on which this estimate was made, seems to me correct; but, as the emigration from the State to the west has been very great, it may possibly not be so much; but I have new data by which to test it. I have obtained the number of *new structures* in 1857-8. There are 10,600 now. Perhaps one-third of these are stores, barns, and out-houses, or public buildings. But granting it shows in Cincinnati, that there are $6\frac{1}{2}$ persons to each building, including all the stores, public houses, &c., it will be safe to say that these "structures" represent 60,000 persons; and as they are occupied as fast as built, they denote that addition to population. I have procured, also, the number of naturalizations,

(table 23,) which amounted to about 5,000 for the year, ending June 30, 1858. This denotes a foreign immigration in the year 1853, (five years before naturalization,) of 30,000. This would give the foreign element in eight years, of 240,000. My estimate in 1857, was 188,000; which leaves considerable margin for a migration from the State. Looking to all the facts before me, I think the annual increase is equal to 55,000, which gives 2,428,000 on the 1st of July, 1858. It is probable the increase of population will be greater during the next three or four years.

2. GENERAL CONDITION OF AGRICULTURE.

In my last report, I referred to the greatly improved state of the agricultural art in this State, within a few years. This was traced chiefly to the following causes: 1. The introduction of agricultural machinery; 2. Drainage and manures; 3. Deep plowing; 4. The introduction of new plants; 5. The influence of agricultural and horticultural societies. Each of these causes continues to exercise a salutary influence on the improvement of the art of agriculture.

Another cause which, perhaps, has not been sufficiently considered, is the great superiority this State enjoys over, perhaps, any one in the Union, in the *facility of marketing its produce*. Ohio is now central to the great confederacy which constitutes the American Union. Its markets lie on every point of the commercial horizon. Not only are New Orleans, on the Gulf of Mexico; Baltimore, on the Chesapeake Bay; Philadelphia, on the Delaware; New York and Boston, on the Atlantic; its great markets, but there are numerous others, risen up within a few years, in other directions, which enable both the farmers and the manufacturers of Ohio to command the readiest sale and highest prices for their produce. St. Louis, Mo.; Keokuk, Iowa; St. Pauls, Minn., and even the distant mines of Arizona, have become markets for the products of the hand and the soil, exported from Ohio. Such wide, various and distant markets, in the most diverse climates, necessarily create a constant and increasing demand for these products.

Price is regulated by demand and supply; hence, even when the supply is abundant, those places and those products upon which there is the greatest demand, on account of the staple character of the products, and the facilities of transportation, must be able, in time, to command the high-

est prices. To illustrate this, in some measure, I append a table (5) of *prices* of many leading articles of produce and manufactures at Cincinnati, on the 1st day of December, in thirteen years, (from 1826 to 1848, inclusive.) The tables are carefully kept by the Superintendent of the Merchants' Exchange, to whose annual reports I am indebted for this information. The rise in the price of some of the articles, (especially such as corn and pork,) is nearly 100 per cent. A part of this is, no doubt, due to the relative inferiority of the crops for several seasons. But the great cause, is the *facility* of reaching *all* the best markets, and thus realizing the highest price to be had in any. Referring to the *laws of transit*, in my last report, it will be found that this State affords the following means of commercial intercourse:

Coast Line, (lakes and rivers which may be navigated with steam boats).....	630 miles.
Canals	849 "
Railroads	2,834 "
Turnpikes	2,900 "
County Roads	66,000 "

Thus, within the limits of the State, the farmer has 73,000 miles of transit lines (of various kinds) on which he may reach market, in every direction. Take, for example, railroads. In Ohio we have 2,830 miles, which traverse the State in every direction, but which also connect directly with other roads reaching through the whole extent of our country. In the Northwest, for example, there are 8,500 miles of road, extending from Pittsburgh, Wheeling and Buffalo, to Milwaukee, Chicago and St. Louis, and now to several towns in Iowa. On the East these lines connect with the Atlantic cities. This, again, enables the farmer to transport his products, at the lowest cost, to the highest market. I have no doubt that in the last seven years this facility of transportation has realized to Ohio two millions of dollars annually, on the simple article of cattle. Millions more are realized from the same cause, on the numerous and valuable articles of domestic export. In looking at the improvement of agriculture, we must not omit, among the *causes* of that improvement, the increased demand created by the *facilities* of commercial intercourse.

2. While the great improvements in the art of agriculture is one of the most interesting and valuable facts in the statistics of this department, I am obliged to report the inferiority of the crops of 1858, as compared with those of average years. Circulars were addressed to a large number of persons connected with agriculture, in all parts of the State, and the

uniformity of their replies leaves no room to doubt the great depreciation of nearly all crops except grass. A general view of the crops and the fruit harvest will be found in table 4.

The general cause of this depreciation will be found in the section climatology. Ten inches of rain more than the average amount falling in the season when plants were germinating and growing, (especially in the months of May and June), united with frosts and easterly winds, were sufficient to cause great and extraordinary injury to the growing crops. It nearly destroyed the oat and fruit crops, while it injured the ripening wheat, and much reduced the great staple—corn. These results were attended by some extraordinary circumstances, of which the following may be mentioned:

1. THE RUST IN OATS.—It is the general idea with farmers that this never occurred before—at least to so great an extent. However this may be, the fact is certain, that both in Ohio and Kentucky, the *rust* seized the oats, as it sometimes does the wheat, and very nearly destroyed the whole crop. It seemed to come under the same circumstances as it does in wheat, and was probably due wholly to the lateness and quantity of the rains. The *practical* result of this failure may be seen by looking into Table 4, where it appears that *one-fifth* an average crop will be a full allowance for this year. The average crop of oats for this State, is from 18 to 20,000,000 bushels, so that the loss was from *fourteen to fifteen millions of bushels*—equivalent, at the average price, to four millions of dollars. But it is not in the money price that this loss appears so much, as in the horses and cattle on the farm, which being deprived of so large a quantity of their usual food, must derive support from other crops, or be sold off. A good crop of hay, and late pasture, has, in some measure, compensated for the deficiency in oats.

2. Another and similar fact was the *late planting*, and in many cases on bottom lands, impossibility of planting corn. In several counties it is stated that corn was planted as late as the 1st of July. In some of the best corn regions the stalk was only a foot or two high, at a period when it is usually in tassel. From the same cause (wetness of the ground) much land was not planted at all. As a compensation for this, most of the corn planted ripened remarkably well; so that the *quality* of this was much better than in 1857. This fact is reported from every section, and the ac-

tual depreciation below the crop of 1857 was probably quite small. (See table 4.)

3. The almost universal failure of all the large fruit is another characteristic of the year, which has probably never occurred to the same extent. Failures of one or another branch of the fruit, such as peaches and plums are common; and the reduction of the apple crop (but not failure) occurs as often as once in three years. But the causes to which I have already alluded seemed to compile to destroy nearly the whole crop of these useful, and in the aggregate, highly valuable fruits. The failure of the fruit is attributed, by different observers to different causes, and undoubtedly was caused by a combination of adverse influences, operating in different degrees in different portions of the State. These influences were the heavy frosts at the close of April; the continued rains which followed in May and June; the cold northerly winds in the northern parts of the State, and in some counties, the small measuring worm. The latter undoubtedly did more mischief than is generally supposed. To the loss of the large fruit, there were occasional exceptions, as already mentioned of the peach, in a few small localities. Some compensation for the loss of the large fruits was found in the abundant crop of small ones; strawberries, raspberries, blackberries, currents and goosberries were plentiful. The evidence and effect of this is chiefly to be observed in the large markets. It is stated by Mr. Buchanan that no less than 12,000 bushels of blackberries were sold in the Cincinnati market. Thus this common and usually magnificent fruit became of decided use and value, as a marketable product.

These being the general characteristics of Agriculture for 1858, I proceed to give the particular results of each crop.

1. OF WHEAT.—In my last report (page 17,) I stated that “the wheat crop reached its greatest decline in 1854, and is now increasing. The crop of 1857 is probably greater, than that of any year since 1852.” This statement proved entirely accurate. The returns made to the Auditor of State, (*vide* table 6,) then, that the crop of 1857 reached 25,397,614 bushels, greater than in any year except in 1850. Making an analysis of the crop by counties, we find there has been a great change in the *locality* of the wheat crop. While the great county of Stark still retains nearly its former position as a wheat crop, nearly all other counties in that region have lost ground, and the great corn counties of the Miami and the Scioto have taken their place. The counties of Butler, Warren, Preble, Clermont,

Hamilton Darke, Brown, Highland, Ross, Pickaway and Franklin raised more wheat in 1857 than in 1850, which was the year of the largest crop, and more than was ever raised in one year by these counties. These counties lying in the southern half of the State seem to suffer much less from the ravages of insects; and thus their crop correspond more nearly to the number of acres planted. The relative amount of wheat raised in these counties in 1850, 1855 and 1857 is thus expressed:

COUNTIES.	1850.	1855.	1857.
Brown.....	360,093	317,400	479,882
Butler.....	529,390	447,813	789,569
Clermont.....	378,928	557,757
Darke.....	370,478	495,212
Hamilton.....	159,133	380,224
Highland.....	495,392	444,172	756,571
Franklin.....	294,162	265,760	443,641
Pickaway.....	338,829	356,764	531,442
Preble.....	471,605	429,681	670,484
Ross.....	359,046	438,440	666,000
Warren.....	447,042	338,574	603,095
Aggregate.....		3,947,143	6,373,877

The following were the products of wheat in the same number of counties, in what was called the wheat region:

COUNTIES.	1850.	1855.	1857.
Belmont.....	667,311	555,548	403,566
Coshocton.....	862,809	184,367	182,552
Fairfield.....	690,089	403,808	582,137
Guernsey.....	564,787	293,613	176,483
Jefferson.....	616,180	280,398	205,907
Muskingum.....	1,003,096	482,042	324,011
Harrison.....	532,778	224,610	190,666
Holmes.....	640,459	132,161	309,300
Stark.....	1,071,177	923,102	997,790
Tuscarawas.....	883,071	489,238	390,435
Wayne.....	426,746	650,280
Aggregate.....	7,531,757	4,395,633	4,413,207

These tables are very significant. In eleven counties in the southern part of the State, the wheat crop of 1857 was 2,426,734 bushels *greater* than in 1855. In eleven counties of what is called the "Wheat Region," the *reduction* is 3,118,550 bushels since 1850. In fact, a close analysis shows that almost the entire reduction in the wheat crop of Ohio is in a few counties, and the most of all, in this grain. This goes far to prove the correctness of a remark made in the late "Agricultural Report

(of 1857,) that perhaps the best mode of avoiding the ravages of the insect would be to abandon the culture of wheat, in certain districts, for a short period of time, and then *change the localities* of wheat growth. This corresponds, on a *large scale*, with two well-known principles heretofore adopted on single farms, viz: The *rotation* of crops, and the practice of *fallow* fields. The latter seems, however, unnecessary, if the former, the rotation principle, can be fully adopted.

Such being the result of 1857, as to wheat culture, we come now to that of 1858. The answers of an hundred intelligent farmers, in different sections of the State, to my inquiries (vide table 4,) prove, so far as can be known without the actual count, that the crop of 1858, was not more than *three-fourths* the crop of 1857. In that case, the crop of 1858 was about 18,000,000 bushels. The north western portion of the State produced quite as well, if not better, than last year; while the southern and eastern counties produced much less.

Looking to the relative ratios of wheat production in 1857 and 1858, we find that the large amount of flour and wheat which found their way to market, at a comparatively low price, in the autumn of 1858 were the results of the harvest of 1857, and not that of 1858. In the last two or three months arrivals of these articles at the principal ports of the State have fallen off comparatively, and such must be the case till the harvest of 1859 comes in.

2. OF CORN.—The crop of 1857, reported to the Auditor, was 82,555,186 bushels. (Vide table 6.) This was the largest crop *in quantity* except one, (that of 1855) which has been raised in the State. But, for the first time it is said in this region, this grain was seized by the frost before fully ripened, and so much injured that its *value* was very materially reduced. We have no means of comparing the real amount of solid grain as related to that of former years. Much of the injured corn was no doubt saved by being fed early to cattle. Taking the number of *bushels* as the standard, we see that the general fact stated in my last report remains true, that the *amount* of the annual corn crop in this State *alternates* with alternate years. The present year (1858,) makes no exception to the rule,

the quantity raised being again much reduced. The following is the production of corn, in alternate years, for the last eight years, viz :

In 1850.....	56,619,608 bushels.	In 1851.....	61,71,282 bushels.
1852.....	18,165,517 "	1853.....	73,436,090 "
1854.....	51,171,551 "	1855.....	87,587,434 "
1856.....	57,802,515 "	1857.....	82,555,186 "
Aggregate.....	224,759,191		304,749,992

It should be remarked, that in 1850 several counties were not returned, which would probably increase the amount of that year up to, if not beyond, that of 1851. Still the aggregate of one set of alternate years falls nearly *eighty* millions below that of the other. The principal variations were in the years 1854, '55, '56, and '57—the year 1854, especially, being one of great drouth. The number of *acres* planted were as follows :

In 1850.....	1,537,947 acres.	In 1851.....	1,664,427 acres.
In 1852.....	1,730,188 "	In 1853.....	1,836,493 "
In 1854.....	1,972,337 "	In 1855.....	2,205,282 "
In 1856.....	2,084,893 "	In 1857.....	2,254,424 "
Aggregate.....	7,325,365 "	Aggregate.....	8,160,626 "

The number of *acres* in the alternate years increased, but to nothing like the extent of difference caused by the variation of the *seasons*. This will be seen by the following view of *general averages* of production in these years, viz.:

	Average per acre.		Average per acre.
In 1850.....	36.8 bushels.	In 1851.....	36.7 bushels.
In 1852.....	33.6 "	In 1853.....	40.0 "
In 1854.....	26. "	In 1855.....	39.7 "
In 1856.....	27.7 "	In 1857.....	36.6 "
General average...	31.02 "	General average...	36.25 "

This proves the productiveness per acre, as well as the greater number of acres planted in the large. There is probably no general law which will uniformly produce these results, but in the rotation of crops on one hand, and the alternation of the seasons on the other, there is probably a *tendency* to this result.

The average production of corn *per acre* for the whole State, and for several counties, in 1857, were as follows :

	Acres.	Production.	Average.
Whole State, (1857)	2,254,424	82,555,186	Bushels. 36.6
Pickaway county.....	72,188	3,409,177	47.3
Ross "	74,114	3,397,188	45.
Butler "	56,383	2,696,597	48.
Franklin "	62,934	2,665,661	43.
Fayette "	48,611	2,257,752	47.
Highland "	53,554	2,022,213	38.1
Licking "	48,156	1,944,390	40.5
Fairfield "	49,630	1,858,862	39.9
Warren "	43,206	1,834,777	42.6
Miami "	42,117	1,631,331	38.8

This table shows that the counties which produce the most in *quantity*, are those, also, which are best in the quality of soil required for this staple. Nearly 60,000 acres in the county of Butler, producing an average of 48 bushels per acre, must be regarded as a most extraordinary result, and nearly as large an average for the *three* counties of Ross, Pickaway and Fayette, taken in connection with the enormous quantity, are facts which constitute the basis of a safe comparison with the richness of any soil, and the value of any staple, in any other region of the world.

For the crop of 1858, we cannot exhibit the same favorable facts. It is undoubtedly short in quantity; though generally much better in quality. A summary of reports sent to me indicate that the crop of 1858 is about *two-thirds an average quantity per acre*. This would give about 60,000,000 bushels; but as the falling off is chiefly in the large corn-growing counties, I think the final result will show even less than that. This shortness of the corn crop is exhibited in two very marked particulars, viz: the high price of corn, and the rapidity with which hogs were driven to market. The latter fact was obviously caused by the other fact, that after the 1st of December nothing could be gained by the farmer in fattening pork.

In order that an idea may be formed of the grain production on the best soils of Ohio, I give the following aggregate of the production of grain (wheat and corn,) in acres, and production in eleven counties for the years 1855 and 1857, in which the largest crops were produced. It will be seen that the crop of 1855 was the best we have yet had in regard to the *ratio per acre*. That of 1857 *measured* about as much, but were both less per acre, and inferior in quality.

In the following table, the whole crop of both wheat and corn are put together:

COUNTIES.	Acres Planted.		Corn and Wheat produced, bushels.	
	1855.	1857.	1855.	1857.
Brown	69,818	73,887	1,899,509	1,830,651
Butler	93,233	98,779	3,692,999	3,456,166
Clermont	58,271	73,307	1,984,301	2,083,297
Darke	57,900	69,467	1,386,180	1,669,580
Franklin	75,779	90,959	2,889,915	3,109,302
Hamilton	42,945	57,866	1,762,386	1,553,053
Highland	85,803	103,039	2,635,936	2,778,784
Pickaway	99,383	106,307	3,966,529	3,940,619
Preble	63,964	81,844	2,019,253	2,091,355
Ross	106,503	115,214	4,316,150	3,835,628
Warren	69,866	77,941	2,581,379	2,437,872
Aggregate.....	823,465	948,630	29,134,587	28,716,337

From this table the following deductions may be made:

1. The increase in *acres* of grain planted in 1857 was 15 per cent., but the product was less in quantity and inferior in quality, so that the crop of 1855 still remains the best we have had.

2. In counties embracing about one-eighth of the State, the proportion of land sown in corn and wheat, is about 30 per cent., and the largest *product per acre* of these grains, together, is 35 bushels; that in one county (Hamilton) the product is over 40 bushels per acre; and in another (Pickaway) about 40 bushels.

3. OF OATS.—The law in relation to Statistics, passed in April, 1858, provided that, the assessors in the different counties should return to the Commissioner of Statistics, through the Auditor of State, the amount of the oats and hay crops in the same manner as they have heretofore reported the crops of wheat, and corn. The law, however, was not enacted till the 12th of April, when nearly all the assessors had commenced their duties. Circulars were prepared and sent to them; but not in time to accomplish anything, except in a few counties—about twenty—from which I make out the following table for 1857.

TABLE 7.—OATS AND HAY.

COUNTIES.	Oats.		Hay.		Average per acre.
	Acres.	Bushels.	Acres.	Tons.	
Anglaize.....	6,133	205,082	6,980	10,206	33.4 bushels 1.4 tons.
Highland	8,969	275,723	10,086	13,114	30.6 " 1.3 "
Huron	15,747	526,848	29,984	37,021	33.45-100 " 1.23 "
Jefferson	14,216	475,416	13,068	18,106	33.5 " 1.4 "
Knox	9,605	286,527	11,912	14,776	29.8 " 1.2 "
Logan	7,032	255,683	13,819	19,458	36.5 " 1.4 "
Lucas	3,099	95,851	10,603	15,350	30.9 " 1.4 "
Marion	9,248	327,641	24,260	34,472	35.4 " 1.4 "
Meigs	4,127	97,334	7,896	10,353	23.6 " 1.3 "
Monroe	11,490	343,681	9,282	10,959	29.9 " 1.2 "
Muskingum ...	15,542	435,104	17,080	21,471	28.1 " 1.2 "
Ottawa	1,550	54,059	3,872	6,655	34.9 " 1.7 "
Perry	8,449	253,922	11,347	14,279	30.1 " 1.3 "
Preble	9,491	369,439	8,521	11,715	38.9 " 1.4 "
Ross	5,567	148,637	6,629	8,320	26.5 " 1.4 "
Shelby	7,656	302,113	39.6 "
Stark	17,405	683,312	26,596	36,764	39.3 " 1.4 "
Summit	10,441	411,647	27,954	40,171	39.4 " 1.4 "
Wood	5,243	146,230	10,592	19,068	27.9 " 1.8 "
Aggregate.....	171 010	5,594,247	249 874	340,249	32.7 " 1.36 "

Looking either to the population or the number of counties in the above list, they make about 21 per cent. of the whole State. Carrying out this ratio, we have the following crops of oats and hay produced in the year 1857:

	Quantity per acre.	Average per acre.
Oats.....	26,572,674 bushels.	32.7 bushels.
Hay	1,701,245 "	1.36 tons.

In my last report, (page 18,) it will be seen that I *estimated* (without other returns than the census of 1840 and 1850, that the crop of oats in 1857 was 20,000,000 of bushels, and that of hay was 2,000,000 tons. The *actual* crop of oats was 25 per cent. greater, and the actual crop of hay 15 per cent. less. Looking, however, either to their value as food, or their value in money, the *aggregate* was very nearly what I estimated to be. With these data, we have now quite an accurate view of the great staple crops.

5. OF POTATOES.—The crop of potatoes last year (1857,) was large, but in some places decayed early. This year the crop is much inferior in quantity but is generally better in quality. In some localities, as in Lake county, where there are rolling ridges of light warm soil, potatoes are

found to do well, and are extensively cultivated. In 1857 2,000 acres were planted in Lake, producing 200,000 bushels. In 1858 3,000 acres were planted, producing 150,000 bushels, being half the yield per acre. In some other counties the average was less.

6. OF BARLEY AND RYE.—The crop of barley was generally fair. The cultivation of barley is increasing, on account of the increase of brewers, which are extending into the country towns. Rye was not a good crop, nor is the quantity raised in the State at all large. Both these grains are more sure crops than wheat, and as the State grows older, and the soils need rotation, they afford a profitable alternate for corn.

7. OF SORGHUM.—In my last report I stated that two facts were clearly ascertained in relation to this plant. 1. That it can be easily raised in this climate. 2. That molasses can be made from it, and probably sugar. These facts remain undoubted, but the test of *commercial value* has not been sufficiently applied to be entirely satisfactory. Last year the molasses made was very imperfect, and some odium was thrown upon its production. Notwithstanding this, there has been a considerable amount of sorghum molasses made in this State from the crop of 1858. In Lake county twelve of the Sorghum Mills were employed, and seven thousand (7,000) gallons of the molasses made.* In the counties of Clermont and Hamilton considerable quantities were made; also in the county of Columbiana.†

8. SUMMARY OF THE CROP OF 1857 AND 1858.—In order to present a fair view of the relative crops of 1857 and 1858, I give in one column the actual quantities of 1857, and in the other the proportion, as stated in table 4, by competent observers, in all parts of the State.

Actual Crops of 1857.	Reported proportion for 1858.
Hay 1,701,245 tons.	A full and fair crop.
Corn 82,555,186 bush	Two-thirds the quantity; much better in quality.
Wheat 25,397,614 "	Three-fourths in quantity.

*Statement of J. Coolidge.

†Statement of J. Heaton.

Preparations are made in Columbiana county for raising a large quantity.

Actual Crops of 1857.	Reported proportion for 1858.
Oats..... 26,572,674 bush.	One fifth crop. Almost a total failure. ;
Barley and Rye a fair crop.	Generally a fair crop.
Potatoes..... a full crop.	Half a crop.
Fruit small crop.	Almost a total failure, except of Berries.

If the above comparison be correct, it shows that the losses of 1858, in quantity, as compared with 1857, were—

On Corn	27,000,000 bush.
“ Wheat.....	6,000,000 “
“ Oats	19,000 000 “

Making over fifty millions of bushels of grain in addition to the loss of half the potatoes, and nearly all the fruits. This loss extends to a large part of the whole Ohio Valley. This fact sufficiently accounts for early driving of hogs to market, and the high prices which prevail in market. At this time, (January, 1859,) corn is 80 cents per bushel; oats, 65 cents per bushel; and hogs, \$6 50 per cwt., in Cincinnati. The prevalence of these prices, in the absence of any great foreign demand, is, in itself, no small proof of the general facts I have stated.

3. THE DOMESTIC EXPORTS OF OHIO.

In immediate connection with the subject of agriculture, is the surplus products which it furnishes for exterior markets. This is the principal element in the active wealth of the State. The permanent wealth is increased by permanent improvements, whether in the soil, buildings, or machinery; but the active commercial wealth, must depend on exchanges; and in regard to the State, as a collective body, must depend on its ability to export products to exchange. In a State mainly agricultural, this exportation must be made chiefly of agricultural products. In this respect, Ohio has been pre-eminent. No State has exported so large a portion of strictly agricultural staples. It still retains, in all essential elements, the same superiority. Our exports can be very accurately ascertained, by intercepting them at the out-lets. These consist almost entirely of three great currents, viz:

1. By Railroads, leading to Boston, New York, Philadelphia and Baltimore;
2. By the Lake Ports, to the Atlantic, Canada, and the North-west;
3. By the River Ports, both East and South.

I have the amounts of produce carried over the railroads, canals, on the river, and mainly from the lake ports; so that I can give the whole, with a close approximation to the truth. The following tables will give a fair view of our export trade, as to the principal staple articles.

1. EXPORTS BY RAILROAD.—This is obviously comprehended in the *freights* of the Lake Shore Line, by Ashtabula, which pass on to the New York lines, the freight from Ohio to Pittsburg, and thence over Pennsylvania Central; the freights by the Baltimore and Ohio line from beyond the Ohio River, and by the Virginia North West Road. Looking into the freights on these great articles which were derived from this side of our eastern limits, I find the following summary of aggregates:

Flour.....	1,097,582 barrels.
Grain.....	956,370 bushels.
Whisky.....	142,595 barrels.
Pork.....	361,541 "
Lard.....	65,000 "
Tobacco	20,345 hhds.
Lard Oil.....	5,000 barrels.
Horses.....	5,000 No.
Beef.....	9,000 barrels.
Cattle.....	118,000 in No.
Hogs.....	341,595 "
Sheep.....	220,656 "
Cheese.....	3,541,337 lbs.
Butter.....	7,292,719 "
Wool.....	5,332,000 "

2. THE EXPORTS FROM THE LAKE PORTS, BY WATER.—The most reliable mode of estimating the exports by water, from Toledo, Sandusky, Cleveland, and other ports of the Lake is to take the aggregate *arrival* of produce at these ports, and subtract from these aggregates the amount *carried off* by Railroads, and included in the previous tables. The home consumption of towns of no greater magnitude may reasonably be supposed to be derived from their immediate neighborhood, without deducting largely from the supplies of general commerce. The *arrivals* of produce we know, because they come either by canals or railroad. I have received from the Board of Public Works the amount of each specific article of produce, carried to the ports of either the Lake, or the river, or the Canals, and I have also the Railroad Report. With these data and making the subtrac-

tion above mentioned, I make the aggregate export of staples from the Lake Ports, to be as follows, viz:

Flour	475,927 barrels.
Wheat.....	2,607,113 bush.
Other Grain.....	1,990,667 "
Whisky	53,581 barrels.
Wool.....	1,321,397 lbs.
Tobacco	1,575,567 "
Pork	7,716 barr'ls.
Beef	227 "
Coal	5,600,000 bush.
Tallow	303,760 lbs.

This, it will be observed, is not the entire exports of the Lake Ports, but that part which goes out of the State, after deducting the portion carried by railroads.

3. EXPORTS BY THE RIVER PORTS.—The exports of the river ports are more accurately determined than those of the lake. The tables of exports at Cincinnati are very carefully kept by the Chamber of Commerce; and the arrivals by canal and railroad at Harmer and Portsmouth, with the local accounts at smaller places, enables us to ascertain very nearly the amount carried by water to other States. To make this accurate, however, for exports, we must deduct from the whole amount thus ascertained, the part shipped by rail and steamboat from Cincinnati to Parkersburg, Wheeling and Pittsburg, which amount has already been stated in the railroad exports given above. Fortunately, however, we can do this; for the amount shipped at Cincinnati in each direction, and by each mode of conveyance, is carefully noted (for the leading staples,) in the annual reports of Cincinnati Chamber of Commerce. Taking, therefore, the aggregate shipped from all the river ports, and subtracting from it the part included in the railroad exports, we have this result, viz:

Flour.....	227,470 bbla.
Grain.....	40,000 bush.
Beef.....	14,200 bbla.
Butter.....	1,424,725 lbs.
Cheese.....	3,180,000 "
Lard.....	3,694,747 "
Lard Oil.....	40,525 bbla.
Pork and bacon.....	95,200 "
Whisky.....	181,556 "
Alcohol.....	59,071 "

Tobacco.....	205 hhds
Sheep.....	4,663 No.
Wool.....	919,376 lbs.
Horses.....	2,400 No.
Candles.....	155,257 boxes.
Soap.....	51,708 boxes.
Eggs.....	17,000 bbls.
Beans.....	5,000 "
Coal.....	3,000,000 bush.

This is hardly half the exports of the river ports, but it is all not included in the amounts already stated, as transported by railroad. In fact this is mainly the exportation of Cincinnati to the south by the river.

Having now seen the exportation by lake, river and railroad, the following aggregate table will present a view of the entire exports of the State and the mode of its conveyance to market:

TABLE 8—EXPORTS OF OHIO FOR THE COMMERCIAL YEAR 1857–58.

Articles.	Exports by Railroads.	Exports by Lake.	Exports by River.	Exports, Aggregate.
Flour, bbls.....	1,097,582	475,927	227,470	1,800,979 bbls
Wheat, bushels.....	2,607,113	2,607,113 bush
Other Grain, bushels.....	956,595	1,990,667	40,000	2,987,262 "
Whisky, bbls.....	142,370	53,581	181,556	377,507 bbls
Alcohol, do.....	59,071	59,071 "
Beef, do.....	6,000	227	14,200	20,427 "
Pork and Bacon, bbls.....	361,541	7,716	95,200	464,457 "
Lard, do.....	65,000	720	18,475	84,175 "
Lard Oil, do.....	5,000	40,525	45,525 "
Butter, lbs.....	7,292,719	18,680	1,424,725	8,735,124 lbs
Cheese, do.....	3,541,337	14,795	3,180,000	6,736,132 "
Candles, boxes.....	33,560 lbs	155,257	156,096 boxes
Soap, do.....	850 "	51,708	51,728 "
Tallow, lbs.....	303,760 "	460,800	764,560 lbs
Grease, do.....	740,600	740,600 "
Cattle, No.....	118,000	118,000 No.
Horses, do.....	5,000	2,400	7,400 "
Hogs, do.....	341,595	341,595 "
Sheep, do.....	220,657	220,657 "
Wool, lbs.....	5,332,000	1,321,397	919,376	7,572,763 "
Coal, bushels.....	5,600,000	3,080,000	8,700,000 bush
Tobacco, hhds.....	20,345,000	750,000 lbs	205 hhds	20,925 hhds
Eggs, bbls.....	1,000	17,000	18,000 bbls

This result of the exportation of this State, I believe to be very nearly accurate. It has been tested in various ways. It corresponds also with the result obtained by taking the aggregate of the known crops, and the

aggregate of home consumption, both of which are ascertained quantities. Take, for example, the wheat crop:

Crop of 1857, as per table.....	25,000,000 bushels.
Exportation, as above, reducing flour to wheat, for 1857, '58.....	11,608,908 "
Domestic consumption.....	12,000,000 "
Remaining for seed, &c.....	1,392,092 "

This corresponds with the actual crop, estimating, as is well ascertained, that the annual consumption of wheat is nearly *five bushels* (average) to each individual. This may be a little more or less in time of a good or bad crop.

In examining the above table, we find some striking results. In 1852 I made out for the *R. R. Record*, (and which was subsequently published in the "Merchants' Magazine,") an accurate statement of the domestic exports of Ohio, the only one, I believe, published till the present time. It was made from all the returns of the public works, the lake ports, and the towns of the Ohio. A re-examination of the subject proved to me that it was entirely reliable. Comparing that return with this for 1858, I find that the exportation of flour and grain has considerably *diminished*, while the exportation of cattle, hogs, horses, sheep, and all the products of animals, have immensely *increased*. The diminution of the former is owing to the real diminution of the wheat crop, as compared with the crops of 1850 and 1851, from which the exportation of 1851-52 was derived. The crops of wheat in 1850 and 1851, amounted to 60,000,000 of bushels, while those of 1856 and 1857, amounted to but 40,000,000 bushels. On the other hand, the exports of grain in 1857-8 were much greater than in 1856-7, the crop of 1857 being much larger than that of 1856. The actual results of exportation correspond very well, therefore, with the results of crops.

In looking to the exportation of animals and animal products, a casual observer may be much surprised by the increased quantities. The increase over 1852 is—

In cattle exported	75 per cent.
In hogs "	100 "
In pork and bacon exported....	100 "
In lard oil "	60 "
In butter and cheese "	110 "

This fact not only proves an increase in exportation of these articles, but

a change in the industrial elements of society—to which I alluded in my last report. It proves that in the large towns the accumulation of capital makes it more profitable to manufacture meats and oils from the raw materials at home; and in the same manner the accumulated capital of grazing farmers enables them to fatten animals more extensively for foreign markets. In addition to this, the railroads have become almost the sole transporters of animals, which enables the graziers and cattle merchants to make exact and safe calculations as to their marketable values.

Another fact is worthy of notice. In the table for 1852, the article of coal did not appear; yet in 1857–58, we exported nearly 350,000 tons—worth more than a million of dollars. This coal is exported to Canada, the upper Lakes, and the lower Mississippi. The demand from the north is not likely to diminish, as there is yet no coal mines discovered there. In addition to the increased quantities of animals and animal products exported from this State, their values also are increased, so that on this part of our exports the aggregate value is greater by several millions. On the other hand, it is undoubtedly true that we have derived a large number of hogs, cattle, and some grain, from Indiana and Kentucky, at the ports of Cincinnati and Toledo. Against this, it will be a fair set off to place a large list of non-enumerated articles, which it is impossible to obtain, in consequence of the *imperfection* of the returns from railroads and other means of conveyance. The following comparative table of values will be found very nearly correct, for the exportation of 1852 and 1858, leaving out all exports except those which arise directly from the soil:

	Value of exports in 1852.	Value of exports in 1858.
Flour and wheat.....	\$15,738 216	\$11 111,518
Other grains	3,272,000	1,750,000
Beef and cattle.....	2,394,750	6,165,551
Pork, lard, lard oil and hogs	7,994,290	13,825,302
Butter, cheese, tallow and grease.....	750,000	1,714,322
Whisky	2,850,000	5,109,953
Tobacco	1,617,420	2,197,125
Wool	2,100,000	2,649,466
Miscellaneous articles, such as apples, beans, eggs, oil cake, &c., &c.	500,000	800,000
Articles manufactured from products of agriculture, such as candles, soap, &c., &c.....	3,000,000	3,000,000
Aggregate values.....	\$40,216 736	\$48,403,297

This gives an increase in six years of 20 per cent. in the value of exported products derived directly, or indirectly, from the soil. But the

above comparison was made on the basis of the table for 1852. To this we should add the following articles, not included in the returns of 1852, viz.:

7,400 horses.....	\$740,000
220,000 sheep.....	400,000
Coal, (8,700,000 bushels).....	870,000

This makes two millions more, which added to the aggregate brings the exports (independent of manufactures and the arts) to \$50,350,000.

There are two comments to be made on this statement of facts, which will serve to show more clearly the important relations which the agriculture of Ohio bears to that of the whole Union.

1. OF THE PRIMARY GRAIN REGION.—Something has been said of the primary grain ports of the West. If the exportation of grain be considered in its *raw* or gross state merely, it is undoubtedly true that there are other States export more bushels of grain than Ohio; but, as sugar is made from the cane juice, so are fat cattle and hogs from corn. Our cattle and hogs could not be marketed unless fattened upon corn; and farmers and graziers who deal in those products know and estimate, that so many bushels of corn are equal to so many pounds of flesh. Taking this basis, then, let us see how many bushels of grain are exported from Cincinnati and from the State of Ohio. "The Annual Statement of Trade and Commerce," made to the Chamber of Commerce, makes an estimate, that if the meat and whisky sold in Cincinnati market were reduced to the bushels of corn necessary to *produce* them, the quantity of grain brought to that market would exceed *thirty-eight millions of bushels*!* This is an amount (applying the same rule to other places) exceeding the amount brought to any other market in this, or, perhaps, any country.

Making the same calculation for the exports in the above table, and allowing only the quantity of corn required to *fat* cattle and hogs, and allowing for no wastage, and excluding the manufactured products, we have the following exportation of grain for 1857-'8:

In wheat (reducing flour to wheat).....	11,612,008 bushels.
In corn, barley, &c.....	2,987,262 "
In whisky and alcohol.....	6,762,605 "
In cattle and beef.....	4,740,000 "
In hogs, pork and lard	19,026,040 "
Aggregate exportation of grain	45,127,915 "

*Annual Report of the Secretary of the Chamber of Commerce for 1857-'58.

If we should count all the corn which has actually been put into the animals, exported and include a number of animals equal to the weight of butter, cheese, candles, &c., exported, we should have a much larger aggregate.

In the above statement we find the export of corn to be about *thirty-four millions* of bushels; and if we test this by an average crop of about 75,000,000, and estimate the amount required for keeping the stock on hand, we find it corresponds very well with what would be a reasonable estimate for the surplus.

2. Another fact worth noting in reference to exports, is the proportion which the exports of Ohio bear to the *foreign exports* of the United States. Take the following comparison between the exports of the Union, in grain products, and the table I have above prepared:

	Exports of O. in 1857-'8.	Exports of U. S. 1856-7.
All products of animals.....	\$24,634,801	\$16,736,458
Exports of wheat, flour and Indian corn....	12,861,018	53,337,839
" spirits, whisky, alcohol, &c., from grain	5,109,953	1,368,245
Aggregate	\$42,606,572	\$71,442,542

The period of time does not exactly correspond; but so far as that may make a difference, it is in favor of Ohio. The exports of the United States in the last year being less. We find the following results: that the exports of *animal* products from Ohio is 50 per cent. greater than that of the entire Union to foreign States. That the exports of whisky, or spirits is nearly 300 per cent. greater; and that the entire export of grain products is 60 per cent. of all exported from the United States. This fact goes to show, also, what rank Ohio holds among the exporting States, which pay for foreign products. When we seek the ultimate results of commerce, we must go to the producer, and it is only by his ability to produce a surplus that commerce can make its exchanges.

4. RAILROADS — THEIR ELEMENTS—CONDITION — OPERATIONS, AND BUSINESS.

In the last year I have sought, by circulars, requiring the details of each operation, to procure the most complete information in regard to the elements and condition of Ohio Railroads. In a great measure, I have succeeded. Two difficulties, however, arose, which made it quite late before

I could obtain full answers. In the first place, several of the roads keep either no statistics of their business, or keep them inaccurately. In the second place, it is difficult to find an officer who is responsible for the statistics of the road. With the exceptions of two or three, I have, however, had full responses, and from all courteous replies. The results I regard as much more favorable to the railroad interests, than the public are led to believe. It is true, that four or five of the roads are in the hands of receivers, and it will be very difficult, if not impossible, to extricate them without great sacrifices on the part of their proprietors. For the State, however, they have accomplished a great and valuable service; one proof of this will be found in the table (page 24) of exports carried by railroad. This is but a small part of the freights they have carried, and the service they have rendered. It happens, very unfortunately for their proprietors, that three of the lines leading from Cincinnati and Columbus, towards Baltimore, are the most embarrassed; while the freights they carry and the competition they create, are among the most valuable to the State.

The following summary, aggregated from tables 9, 10, 11, 12, and 13, are derived from the reports, in whole or in part, of thirty-one railroads, which are either wholly or partially in this State. Of these, the following six are partly in and partly out of the State; so that a fair view of them cannot be presented without including the whole; viz:

Cleveland, P. & Ashtabula.....	25 miles in Pennsylvania;
Indianapolis & Cincinnati	90 " " Indiana;
Pittsburgh, Fort Wayne & Chicago	44 " " Pennsylvania;
Southern Michigan and Northern Indiana.....	438 " " Michigan, Indiana and Illinois
Toledo & Wabash Valley.....	178 " " Indiana;
Ohio & Mississippi	180 " " Indiana.

Deducting these, there are 2,983 miles of railroad within the State lines of Ohio. These roads above have, themselves, over 500 miles in this State. Their principal termini are in this State; and a large part of their stock held here, so that we can not properly divide them.

The summary of results is—

Length of 31 roads.....	3,948 miles.
In Ohio, (including branches and double routes)	2,983 "
Capital stock subscribed and paid.....	\$70,638,215
Aggregate debt	85,600,175
Cost of roads	159,705,307

*Number of passengers carried.....	3,354,160
Freight carried	2,141,839 tons
Gross receipts.....	\$13,9 3,225
Gross expenses.....	8,692,643
Net receipts	5,204,582

CLASSIFICATION OF DEBTS.

1st. Mortgage debt	\$30,590,550
2d. " "	17,235,250
3d. " "	8,129,300
† Income, floating debt, &c.	13,332,395

OPERATION OF ROADS.

‡ Number of locomotives	495
Fuel consumed,—cords of wood	209,416
" " tons of coal	16,675
¶ Number of employees.....	5,298
Number of passenger cars	396
Number of freight and baggage cars	6 435
Average speed of passenger cars,—miles per hour	22
" " " freight cars "	12
Number of miles run	6,647,843
Average to a locomotive	14,000

If we make a *pro rata* deduction from the six roads which run out of the State, we shall have the stock, cost and debt of the precise miles of railroad within the lines of Ohio to be as follows:

Stock in Ohio Roads.....	\$53,100 000
Debt of Ohio Roads.....	64,200,000
Aggregate cost.....	116,250,000

But few of the roads declare dividends; but several, such as the Little Miami, Columbus & Xenia; Cincinnati, Hamilton & Dayton; Cleveland, Columbus & Cincinnati; Cleveland, Painesville & Ashtabula; Cleveland & Toledo, with one or two others have made large profits. The nett proceeds of these roads, counted on the aggregate cost, was as follows:

Cleveland, Painesville & Ashtabula.....	15 per cent.
Cleveland, Columbus & Cincinnati.....	12 "
Little Miami, Columbus & Xenia.....	8 "
Cincinnati, Hamilton & Dayton.....	7 "
Cleveland & Pittsburg.....	3½ "
Cleveland & Toledo.....	6 "
Indianapolis & Cincinnati.....	7 "
Central Ohio.....	2½ "
Bellefontaine & Indiana.....	4 "

* Four roads made no return. † The same. ‡ The same. ¶ The same.

A revival of good crops and commercial prosperity will enable four-fifths of the roads of Ohio to make reasonable dividends. The above roads cost about \$17,000,000, and pay about \$3,200,000 nett profit, which is near 7 per cent. on cost.

In regard to *casualties*, the reports of both companies and carmen show that there has been very few indeed, and but one in which any proper complaint could be made of the road or company.

5. OF MANUFACTURES.

The manufactures of this State are steadily progressing, especially in the large towns. The manufactures of Cincinnati are about 50 per cent. greater than in 1850. I endeavored to obtain the precise amount of manufactures, but succeeded only in getting the leading branches. On data furnished by the Chamber of Commerce, in addition to those I have obtained, I am enabled to give the following view of the manufacturing and mechanical industry of that city:

TABLE 14. MANUFACTURES OF CINCINNATI.

CLASS.	1840.			1850.			Ratio of Increase.
	No. of Establishments.	No. of Hands.	Annual value of Production.	No. of Establishments.	No. of Hands.	Annual value of Production.	
Manufactures of Wood...	221	1,426	\$2,095,857	395	3,798	\$4,143,900	100 per cent.
" Iron	109	1,250	1,728,549	205	6,075	5,779,495	230 "

" Paper...	47	512	669,600	51	1,073	3,681,650	290 "
" in Science						1,850,540	180 "
and the Fine Arts. . .	59	139	179,100	99	393	562,000	200 "
Manufactures of Carriages							
Cars, &c.....	6	87	117,000	74	498	507,447	300 "
Manufactures of Miscellaneous	36	264	534,500	171	2,014	2,031,060	300 "
Aggregate.....	1,594	10,608	\$17,325,651	3,35	33,098	\$52,109,374	200 per cent.

One of the important facts in the present state of our manufactures, is that each year adds some new branch of industry, or some new machinery which increases both the amount of labor and production. This is remarkably illustrated in the case of the sewing machine. The clothing business of Cincinnati being quite remarkable, I procured from Mr. Charles Cist, who was investigating the business of that city a statement of that particular branch. In December 1859, there were 1,016 sewing machines employed in the clothing business, which required the services of 5,000 persons. In addition to these 7,000 other employees were at work, making in all 12,000 persons, and an amount of products (including raw material,) estimated at \$15,000,000! Undoubtedly many of these persons were employed in the surrounding country, and perhaps some of them at a distance, but the employees, the capital and sales centered in Cincinnati. It will be observed that this exceeds 50 per cent. my estimate last year for the whole State. In truth, the effect of the sewing machine has been to increase the business greatly. There are now two factories in Cincinnati for the manufacture of this machine, and the general result is that in less than two years from its introduction, this invention has given new employment to hundreds of persons, and new profits to capital.

I intended to have procured the manufacturing statistics of Cleveland and other large towns, but the task was too great for the past year.

(*See* table 25 for Cincinnati.)

6. OF THE DISTILLATION AND CONSUMPTION OF DOMESTIC LIQUORS.

In table 15 will be found a statement of distilleries, the quantity of corn consumed in distillation, the gallons of whiskey made, and the number of houses at which liquor is regularly retailed. In Cincinnati and Cleveland the statements of drinking houses were made by the Mayors, after careful examination, and in most of the large towns is believed to be accurate. In the counties both distilleries and drinking houses were returned by the Auditors, the former accurately and the latter an estimate, made after inquiry. The consumption of corn and liquor made is mainly furnished by distillers and manufactures. The general aggregate is as near the truth as such a table can be made. In regard to what is a

"drinking house," I believe the table includes only those which make it a business, and fairly comes within that description. In Cincinnati and other large towns, there are many stores which retail liquor *incidentally*, but are not properly within the limits of this table. The following are the general aggregates of the table:

Reports from (Counties).....	87
Counties with no distilleries.....	31
Counties with distilleries.....	56
Number of distilleries in 56 counties.....	160
Corn distilled.....	11,714,985 bushels.
Whisky made.....	39,029,594 gallons.
Whisky in barrels.....	780,591 barrels.

This quantity may seem enormously large but, we have some other data, by which to test it. 1. Turning to the table of exports (page 26) we find that Ohio *exported* 436,578 barrels of whiskey, including alcohol. 2. Turning to table 15, we find that 74 counties had at least 6,405 drinking houses, including the other 14 counties, it is safe to presume the entire aggregate to be near 7,500. I cannot make the annual consumption of these to be less than 100,000 barrels. 3. We have the amount used in the arts, which must be a considerable quantity. Allowing then for a moderate stock in hand, we account for a quantity, not far from that given above. Again, in the commercial year 1856-7, (when the brandy crop of France failed,) 530,000 barrels were sold in Cincinnati. The quantity is less now, but is still enough to prove that an enormous amount is made.

In the quantity of corn consumed, there may be some inaccuracy in several counties, as the smaller counties were estimated from the number of distilleries; but the amount in the great distilling counties of Montgomery, Greene, Hamilton, Pike and Scioto, is nearly precise.

7. NEW STRUCTURES.

In table 16 will be found the number and value of the new structures erected in 1857-8, as returned by the assessors. The value, especially in Cincinnati, is much below the true value, but the return will serve to show something of the ratio of increase. About *one-fourth* of the whole number of new structures are barns in the agricultural counties, and many of the houses in the new counties are log houses. On the other hand, any

deficiency in value among these is much more than made up by the very expensive structures in Cincinnati. The results are as follows:

New structures.....	10,400
Value of new structures.....	\$5,012,052 00
Average value of each.....	500 00

8. PROPERTY AND APPRAISEMENTS.

In my circulars last year, I asked the auditors of the counties whether any, and what differences, existed between the *appraised* value of property, and the *selling* value. Various replies were returned, making the difference from 5 to 75 per cent. In a very few counties the difference was from 5 to 10, while in the majority it was from 20 to 30 per cent., and in some from 50 to 75. The result implies that property generally is appraised too low, which is not important, as it regards taxation, if it were not unequal. But, in fact, the evidence proves that there is considerable inequality in the appraisements. The following valuation for 1855 and 1858, may serve to compare the general value of property, but does not represent truly the real value:

	1855.	1858.
Value of land.....	\$432,631,785	\$437,183,132
Value of towns	145,596,754	153,112,815
• Value of chattels.....	283,018,815	250,514,084
Total.....	\$860,877,354	\$840,800,031

The value of new structures in the last three years is considerably more than is here allowed for the increase of lands and town lots, though it is probable that the value of farms is no more now, perhaps not as great, as in 1855. The migration from Ohio, west, has, however, been much checked, and the probability is, that lands in Ohio will rise for a few years to come.

9. MILLS AND STEAM ENGINES.

I have added to table 16 a new return of mills and steam engines for 1858. This return fully justifies my estimate on imperfect returns for 1857. Some of the counties have not yet reported the true number of

steam engines. In those completed, there are 2,600, which makes 3,000 in round numbers a fair estimate, and shows that STEAM does, in this State, the work of *seven hundred thousand men*.

10. DEBTS OF RECORD.

Table 17 gives the number of conveyances of property, including permanent leaseholds, the number of mortgages, and the amount secured, for the year ending June 30, 1858. The result is—

Conveyances of real estate.....	52,709
Mortgages on real estate.....	22,541
Money secured by mortgage	\$27,546,696
Average amount secured by each.....	1 250

The amount of money secured by mortgage in 1857-58, is less than that secured in 1856-57. This is a natural consequence of the check given to business and speculation, by the commercial convulsion of 1857. The greater part of mortgages are given to secure purchase money of land sold. Supposing the mortgages to be generally for half the value, we find the land mortgaged to amount to over *fifty millions of dollars*. We find also, that of the conveyances, one-half were not attended with any mortgages. Many of these were for partition and settlement of estates, but this fact also indicates that there were a large number of sales for cash—a circumstance which proves, among many others, the increasing wealth of the State.

Table 18 exhibits the number and amount of judgments for money, obtained in the State of Ohio, for the year ending June 30, 1858. The result is—

Number of judgments.....	18,080
Amount of judgments.....	\$8,716,518
Amount collected by execution.....	1,319,739

The number of judgments rendered for money is much greater than in the year previous, indicating the effects of commercial disasters.

6. SOCIAL STATISTICS.

Of all branches of Statistics this is becoming the most important, because the basis of social science. The latter consists of all the laws by

which social movements are governed. These laws are traced out by constant observation on the special phenomena which they produce, and a deduction from the constancy of these phenomena of a uniform cause, and a uniform course of procedure. Without the observation of, and noting these facts, the whole progress of society must seem to be irregular and uncertain. To the casual student of history, it seems now a confused mass of variable, mutable, and inconsistent results. Before the advent of modern science, any idea of systematic laws of human movement would have been deemed alike impossible and absurd; but the constant observation of facts, the exact statistics recorded, the progress of science in all departments has made it possible to conceive of, and probable that there actually exists *uniform laws of social movement*, based upon any given condition of society. If the *elementary* social condition be different in regard to religion, government, arts, science and industry, the resulting movements of society will be different. Hence, when we have ascertained, by accurate observation upon, and record of the social phenomena, that the social movement is uniformly in a certain direction, and that certain results uniformly follow, we shall know in what *elements* the conditions of society must be changed, in order to change the results. Hence, when this law of social movements is ascertained, then the philanthropist, legislator and jurist will know precisely what must be done, and how, in order to remove the evils, or reform the wrongs, or produce the results they desire. They will know that certain *elementary conditions of society* must be changed, and they well know that by removing temptations, or laying restraints, or enlightening the mind, or changing the course of industry, or producing new arts, they will change the social tendency, and thus change the results. The introduction of the sewing machine at Cincinnati, has increased the number of women employed in that department, and it is certain that if the price of their labor (relatively) could also be increased, a certain number of those women would be removed from pauperism or prostitution, to which some (more or less) are certain to fall. A reduction of intemperance would certainly reduce the number of murders and suicides; for we have the recorded fact (table 21) that a large number of them are produced from this single cause. A sudden change in industry (like what are called commercial revulsions) would certainly throw numbers of laboring men out of employment, and thus throw some of them into pau-

perism, a result which is signally illustrated in New York and other large cities in time of commercial panic.

I give these cases simply as illustrations that social movements are governed by certain laws arising from the elementary condition of society. We must know what those movements are, and then we shall know what changes to effect in order to produce different results. It is more than twenty years since an eminent Statician* informed the world that in France (a country of more than thirty millions of people,) *the same number* of crimes, committed in the *same mode*, were reproduced each year. Not only would France have in the next year the same number of murders, but that they would be committed with the same weapons! In his strong language: "Man paid his tribute to crime with more regularity than that which he owed to nature, or to the Treasury!"

This proposition startled the thinkers of the world, especially those who relied solely upon the free agency of man. It was combatted, both then and now. The fact, in its substance however, remains. I certainly shall not greatly mistake if I predict to you that a certain number of murders will take place in Ohio during the coming year. Society in a given condition will produce certain results in crime, as in other things. It prepares the crime which the individual commits. It excites passion, and presents motives to which the individual yields.

The *inferences* which some have drawn from his proposition, against the freedom and the responsibility of man, the Statician is not answerable for. They are, however, not true, because not correct inferences. They *do not follow*. As I before remarked, society, or that part of it which thinks and acts, can change the results by changing the *elementary conditions* which produce them. When you know exactly what the change ought to be, it is not very difficult to produce it; nor does it follow that because a thousand crimes must be committed in Ohio, that a thousand particular individuals *must* commit them. It is true that the individual will act from motives, but is it not just as true that the individual frequently seeks those motives, and presents them to himself?

I have noticed this uniformity of social action in order to illustrate the necessity of social statistics, in order to found a social science, and guide the legislator and the philanthropist toward the great and noble objects

* Quetelet—"Sur L'Homme," Tome premier—10. Paris, 1835.

they have in view. I have commenced this year, as will be seen in the sections and tables following, the collection and classification of certain social facts which are deeply interesting, and may prove quite useful. These facts relate to what I define generally as the infirm and dependent classes. I was particularly led to this investigation by the 8th section of the supplemental act passed at the last session of the Legislature. This is as follows:

"SEC. 8. It shall be the duty of the said commissioner to ascertain, as far as practicable, the number and condition of all the insane persons in this State, distinguishing between the male and the female, dangerous and harmless, curable and incurable; also the number of idiots, blind, and deaf and dumb persons, with such classification of each and information connected therewith as shall seem to him important, and shall state the number of each class of persons above mentioned who are paupers, together with their ages, and respective places of nativity, and what number are capable of performing manual labor with benefit to themselves and profit to the State."

This section refers to what may be called the "infirm classes," and connected with the subjects of crime, pauperism and disease, will present a complete view of the dependent classes of society. To aid in this investigation, I directed circulars to the most experienced persons in the various departments of practical benevolence, but have received answers from only a few, sufficient, however, to give a general idea of the elements and conditions, which arise from these infirmities. In connection with this branch of the subject, I also procured from the clerks of Courts, a complete account of the indictments and convictions for crime; from the mayors of the principal cities an account of police offences, and from the infirmaries an account of pauperism, which taken together present a fair view of the infirm and dependent classes of Ohio.

1. OF THE LUNATIC, IDIOTIC, BLIND AND DUMB.

1. OF THE NUMBER.—This can be most accurately ascertained by referring to the census of 1850—allowing for the growth of population—some additional increase from the increase of cities, and some allowance for the

errors of the census. Taking into view their data, I estimate the number of this class now in the State, to be as follows, viz:

Number of Lunatics.....	1,936
“ Idiotic	2,016
“ Deaf and Dumb.....	1,176
“ Blind.....	831
Aggregate of the defective classes.....	5,959

This gives for the Insane and Idiotic, in proportion to the whole population, as 1 in 600. Some years since, Quetelet estimated the proportion for France, as 1 in 1,000; in England, 1 in 783; in Norway, 1 in 551. These proportions show that the relative proportion of the “alienated” (as the French call it) class in Ohio, is about the same as in middle Europe, and the conditions of society are sufficiently similar to render that result probable. A distinction is very properly observed in our census between the “insane” and the “idiotic,” for they are entirely different in their origin and nature. It seems to be admitted now, that the diseases of the mind increase with the developement of intelligence.* If this be so, it exhibits another of the laws which regulate social action. Esquirol,† a high authority, says, “The vices of society augment the number of paupers and criminals; and the progress of civilization multiplies the insane.” Idiocy, however, depends less on society than on natural causes. “In idiocy,” says Quetelet, “their causes have hindered the developement of the organ, and by consequence, the *manifestation* of intelligence. In the production of insanity, (deranged intellect,) the brain is over-excited, and exhausts its power physiologically.” The testimony given to me by eminent physicians conversant with this subject, corresponds with this statement.

To ascertain something of the “condition” and “curability” of this class of the infirm, I must begin with the public Institutions for the cure of the Insane, and the testimony of experienced persons on that branch of the subject. There is no possible question, that the modern treatment of the insane is far better than it was formerly; and that to the careful and skillful treatment of these patients in public Institutions, is due a very large portion of the cures which have taken place. The time is yet quite recent when a very large part of the insane had no retreat—no chance of cure, except such as was found in the narrow limits and unwholesome rooms of

* Quetelet “Sui L’Homme,” p. 121. Paris, 1835. †Idem, 120.

a jail. Even now, a considerable number of lunatics are confined in the county jails. This seems so repugnant to propriety, as well as humanity, that, although the public Institutions have been trebled,* it yet seems desirable to find some place for their retreat. The specific questions, I now proceed to answer according to my information.

1. HOW MANY DANGEROUS? In regard to absolute *danger*, there are probably few lunatics which require confinement and positive restraint; but, on the other hand, there are few who do not require great care and watchfulness. Within the limits of regular Asylums, there are very few of the patients confined; and but few who are not allowed the limits of the grounds. But, one characteristic of lunacy, is to be subject to spasmodic attacks—the results of which can never be foreseen. Hence, constant care and vigilance are required.

2. "CURABILITY" AND "CONDITION."—These questions include all that is known as valuable, in regard to the insane and idiotic. Notwithstanding all that has been discovered, and all the improvement made, and the great body of real science existent on this subject, it is remarkable that a great difference of opinion exists among the most intelligent and experienced physicians. I have before me the answers of four distinguished men to questions propounded by me, which differ from each other, and probably present the most extreme views in regard to the "curability" of insanity. In order to give a view of what is known in regard to the insane, I present the substance of their opinions.

Dr. J. RAY, of the Butler Hospital, R. I., one of the most eminent in this department, says:

"1. On the question of the curability of insanity, there is a wide diversity of opinion. There is much reason to believe it was more curable in England and this country fifty or sixty years ago, than it is now, for the reason probably that it is now more complicated† with other affections of the head, and a less vigorous constitution. There is also reason to believe it is more curable at the present day, in some parts of our country than in others. In the midst of a rural population, I should expect a larger proportion of recoveries than in a community of cities and busy villages,

* Besides these, Hamilton county has an Asylum.

† This corresponds with the opinion given by Esquirol, that insanity increases with civilization.

provided that the rural population is tolerably new. Judging by my own observations here in New England, I should estimate the curability of insanity at about 50 or 60 per cent."

DR. J. J. M'ILHENNY, Superintendent of Dayton Lunatic Asylum, says:

"In reply to question 1st, permit me to state, that perhaps the following estimate approaches as near to the number of insane who are *cured* as that of any other:

"We will reckon that *one-half* of those who are attacked with insanity, remain so until death. *One-half* discharged as recovered from first attack, of which number *three* relapse.

"This estimate of final recoveries, at first sight, may appear small, but when we come to examine and trace the history of all those discharged as cured, it will be found sufficiently large. There is a class of minds when once interrupted in their normal action, but little hope can be entertained of a permanent recovery."

DR. HILLS, of the Central Ohio Lunatic Asylum, in regard to "curability," says:

"If properly cared for *early*, from 75 to 80 per cent. Taking *all cases* as they are cared for, and it is from 50 to 60 per cent.

"The experience of the past 20 years indicates an increase in the *curing* of the *insane*, if not the *curability*. See pages 20 and 30 of my report (the report of the Central Ohio Lunatic Asylum for 1858.) I think the proportion of the *insane* to the population is slowly increasing."

DR. W. M. AWL, so long and usefully connected with the Ohio Asylum, in answer to the question, what proportion of the insane are *curable*? replies, after noticing the various sources of error, such as the difference between old and new cases, the number discharged, deaths &c., says, referring to the records of the State Asylum, from 1838 to 1850:

"These records are published, and of which a bound volume may be found in the State library, comprise a period of *eleven years*, or from A. D. 1838 to 1850 inclusive. The whole number of patients admitted during this period was *thirteen hundred and sixty-five* (1365.) Of these the number discharged restored to the use of their reason, in the same period, was *six hundred and thirty-five* (635,) which is $46\frac{5}{11}$ per cent. of recoveries on all admitted in the eleven years, including of course, every form and variety of impaired and defective intellects submitted to treatment, both of

persons old and young, male and female, ignorant and learned, vigorous and feeble, American born or from foreign lands—and whether a short or a long time insane.

“This meets the general question of *proportion*, and might alone be satisfactory, if received with confidence, and the range for induction be deemed sufficiently extensive. I proceed, however with some further items taken from the same reports.

“The whole number of patients discharged from the institution during the above period, was *ten hundred and forty-two*, (1042,) leaving *three hundred and twenty-three* (323) still under care. In regard to these the record is as follows:

WHOLE NUMBER DISCHARGED.

Recovered	635
Improved	67
Incurable	159
Idiotic	2
Died	179
	<hr/>
	1,042

“The per cent. of recoveries is 60 94–100 as calculated on these discharges.

“Now for what are denominated the *recent cases*, viz: such as had been insane *less than twelve months before admission*, the whole number of these discharged in the eleven years was *five hundred and sixty-nine*, (569) agreeably to the following table:

WHOLE NUMBER OF RECENT CASES DISCHARGED.

Recovered	516
Incurable	13
Died	40
	<hr/>
	569

WHOLE NUMBER OF OLD CASES DISCHARGED.

Recovered	119
Incurable	215
Died	139
	<hr/>
	473

“On the *recent cases*, those discharged as above, the recoveries amount to 90 70–100 per cent., whilst on the *old*, or such as had unhappily been

deranged in mind for a longer period than twelve months before admission, it reaches but to *twenty-five and sixteen one-hundredths per cent.*

"Are any clearer exhibitions needed to illustrate the curability of mental disorders? and could facts more forcibly demonstrate the value of early treatment?"

It will be observed that the main differences in these opinions and results, are those which arise from *different premises*. Those who give the largest proportion to the *curable insane*, assume *recent cases*, under the *most favorable circumstances*, and also that those *discharged* are really cured. These are not the real conditions under which the great body of the insane in Ohio are found. Many who have become deranged, have been suffered to remain so till their disease has become chronic; others are most unhappily and unfortunately conditioned for improvement, and others again, who have been apparently cured, have spasmodic returns of their old disease. Taking all patients, in all conditions, just as they are found, the acknowledged results are not essentially different.

Dr. Ray, in New England, gives the curability of insanity at.....	55 per cent.
Dr. Mollhenny, of Dayton, " " "	50 "
Dr. Hills, of Columbus, " " "	55 "
Dr. Awl, the actually cured of eleven years.....	46 "
Dr. Hills, properly cared for early cases.....	75 "
Dr. Awl, cured of those discharged.....	60 "
Dr. Awl, cured of entirely recent cases.....	90 "
Dr. Awl, cured of old cases.....	25 "

Giving credit to these statistics, and comparing them all together, it results, that taking all the *insane as they are found*, but little more than *one-half* are curable.

The distinction drawn by Dr. Awl between *old* and *recent* cases, is certainly important, and is sustained by the experience of some old institutions. Dr. W. H. Rockwell, of the Brattleborough Asylum, Vermont, says: "Of those placed at the Asylum within six months of the attack, nearly nine-tenths have recovered. This corresponds with Dr. Awl's extreme statement as to the *recent* cases. The following tables will give the result in other States for a very large number of patients, and will establish something like a general ratio. It corresponds very nearly with the general result stated above. The institution at Hartford is one of the old-

est and best in the United States, and the ratio of cures there is a little above one-half.

	Whole No. discharged.	Discharged cured.	Died.
Insane Hospital, Me.....	1,518	685	312
Vermont Asylum.....	2,299	1,283	
Butler Hospital, R. I.....	635	245	148
Hartford Asylum, Conn.....	2,916	1,534	322
Utica Asylum, N. Y.....	4,369	2,017	573
Trenton Asylum, N. J.....	801	411	140
Jackson Asylum, La.....	485	132	282
Indianapolis Hospital, Ind.....	845	594	100
Nashville Hospital, Tenn. . .	163	83	24
Nine institutions.....	14,031	6,984	1,811

The deaths of the Vermont Institution would probably increase the whole number of deaths to 2,200. The *proportion* of cures, then, in the whole number discharged from treatment, is 50 per cent., just one-half. But if we deduct the deaths, the proportion is 60 per cent.

The analysis of results in the Ohio Central Lunatic Asylum, is one of the best to be found anywhere, and I reproduce the results merely to compare with the above table.

The whole number discharged.....	3,045
Whole number cured.....	1,687
Died.....	428

Proportion of the whole number cured, 55 per cent. The per centage of recoveries, under all circumstances, is thus stated by Dr. Hills:

1st. On all admitted.....	50.27
2d. On all discharged.....	55.46
3d. On the average number treated.....	36.44
4th. On all cures recent when received.....	73.33
5th. On all cases chronic when received.....	24.20

The summary of the whole is thus given by Dr. Hills:

"I will merely say for the benefit of those who are shy of figures in masses, that the twenty years experience of this institution shows that out of every *one hundred* cases of not more than one year's duration when admitted, *seventy-three* have *recovered*, and *eight* have *died*; that of the same number of more than one year's duration when admitted, *twenty-five* only have *recovered*, while *twenty* have *died*. The remaining nineteen in the first hundred have nearly all been *improved*, while the remaining fifty-five in the second hundred have nearly all remained *unimproved*. Also that

out of every one hundred of *all* patients admitted and subsequently discharged, including all shades and varieties, hopeful and hopeless, *fifty-five* have been restored, while *fourteen* have died, *twelve* have been improved, and *nineteen* remained unimproved."

3. OF AGE, SEX AND SEASON.—These conditions seem to have no sensible influence upon insanity. *Generally* there are more women than men in the institutions, but in one or two there are more men. The difference in the deranged between the sexes, is not sufficient to indicate any decided tendency in either over the other.

The *admissions* to the Central Asylum stand thus:

Males	1,680
Females.....	1,620

The *males* here slightly predominate.

In the total number of recoveries, the *females* are a little more numerous, but in neither case is the difference important.

Age has no more effect than sex. Very few children ever become insane; probably for two reasons—that their faculties have not attained the maturity in which, strictly speaking, they *can* be deranged; and perhaps more yet, because they are entirely free from the care, responsibilities and excitements which mainly cause derangement of the intellect. The largest number of the insane are between 20 and 30 years of age. But for this there is sufficient reason in the fact that the largest number of adults are in that age. The curability of insanity does not seem to cease with any age. One of five persons over 70 years of age recovered.

The *seasons* seem to have as little effect on this disease. Each month returns its regular quota, and each year continues to increase the number with the increase of population.

One thing seems clearly indicated from this state of facts, that insanity is a disease wholly *self-dependent*; that is, it has its own specific origin, without reference to sex, age, season, or condition. Whether it be hereditary, or from over excitement, from a physical or moral cause, it is individual, and not general in its relations. When moral or physical—Esquirol's assertion—that it is due largely to over-excitement, and consequently advances with the increase of civilization, is true.

4. OF THE IDIOTIC.—This class are slightly more numerous than the insane. The difference between these and the former class is strongly marked. The faculties of the idiotic have *never arrived at completeness*.

The defect is simply *deficiency*. They all seem to want perception and energy. In teaching them, the great difficulty is to excite their attention and fix it upon any object. It was never till lately attempted to do anything with them. In 1848, a school for the idiotic and feeble minded was founded in South Boston, under the superintendence of Dr. S. G. Howe. In 1857, there were 47 pupils in this school, and 15 had been discharged in the year. Of the 15 discharged, 11 were improved, and 4 were hopeless. The State Institution of Ohio has but fairly commenced its operations. There is nothing in the statistics of these institutions to indicate any definite results, and from the small number in them, and the small effect yet produced, there is no indication that the great body of Idiotic persons will ever be really made useful to the community. A small portion of them who have some intelligence may be put at useful work under the direction of superior minds.

5. CAN THESE CLASSES OF PERSONS BE PUT AT MANUAL LABOR WITH BENEFIT?—It seems to be settled that they cannot. Dr. RAY says:

"2, 3 and 4. In hospitals a portion of the patients engage more or less in some useful employment, and thus contribute somewhat to diminish the cost of their support. Their labor can never be very profitable, because their own condition and the necessary rules and attentions of the hospital forbid more than six or seven hours of work in the day, and an expensive amount of attendance is required to overlook them. Many, also, break more tools than their labor is worth. Out of a hospital, the proportion of the insane able to support themselves must be very small. I doubt if I have met with a dozen in the whole course of my experience. A few, very few, may do a little towards their own support. I know of no institution, at home or abroad, devoted exclusively to the insane which is sustained by the labors of the patients."

Dr. McILHENNY says:

"I must give a negative answer. Although the incurable insane can be greatly improved, there are but few, if any, who could be depended upon for self-support. Nearly all the insane are subject to paroxysms of trouble, which often render them unfit to take care of themselves, and many are, much of their time, from physical as well as mental inability, unable to labor.

No one having charge of the insane should think that they should not labor. They need constant and varied employment, both of body and

mind for their well being and comfort, but nothing like coercive labor can be resorted to in their cases, which is generally necessary, with confined persons, to insure a support."

DR. HILLS says:

"As to laboring for their support, it can be done only by a small proportion of the whole number."

DR. AWL says:

"But valuable as labor in various ways unquestionably is, and much as I desire it suitably promoted, I am led to doubt if its avails can, to any extent, be relied on for actual support in either of these commendable public Institutions."

That the institutions for the Insane and Idiotic cannot be self-sustaining is fully answered in the testimony given above.

DR. McILHENNY says:

"No institution of the insane, within my knowledge, ever has been or is self-sustaining."

6. HOW MANY ARE PAUPERS.—Dr. McIlhenny says of Montgomery county:

"I suppose about *four-fifths* of the insane in our county are paupers."

This statement is probably true of nearly all the counties. Notwithstanding the large number of the Insane and Idiotic in State Institutions, yet nearly all the Jails and Infirmaries of the State contain them, and Hamilton county has an Asylum of its own.

From this review of the Insane and Idiotic class, it is quite obvious, that the large mass of them must remain a charge on the public, and the only encouraging aspect of their condition, is the greater humanity of treatment, and the frequency of recovery when the cases are recent. Taking the proportion, ascertained by Dr. Hills of 73 per cent. recovered of *recent cases*, it certainly proves that insanity is no more dangerous than many other diseases to which the human frame is subject.

OF THE DEAF, DUMB, AND BLIND.—There is no more difference in their capacity for self support, than what is indicated by the nature of their defects. In one respect they are decidedly more dependent than the insane. The insane frequently recover, and by being returned to their friends, or made useful, cease to be a public charge. The Deaf and Dumb never recover; the blind but seldom, they accumulate, therefore, and will continue

to accumulate while population increases. The deaf and dumb frequently learn to do some work, and the blind are taught many common arts.

A. B. Hutton, Principal of the Pennsylvania Institution for the Deaf and Dumb, says :

1. "What proportion of the deaf and dumb are curable? From my own observation and information I should say none. I have never known a deaf mute to be cured, or to be much benefited by surgical skill. I have never heard of an authenticated case of restored hearing in a true mute.

3. "The want of hearing in itself does not prevent their laboring or being employed in a variety of occupations, and supporting themselves.

5. "The number of mutes is increasing with the increase of the population, but whether the relative proportion is so or not, I have not data sufficient to form an opinion."

DR. ASA D. LORD, Superintendent of the Ohio Blind Asylum, says:

"The following facts and conclusions in regard to the blind, are based upon the history of the Ohio Institution for the Blind. This history now covers a period of twenty-two years. During this time 355 pupils have been instructed—204 males and 151 females. Of these, 112 are now in the Institution, and 243 have withdrawn, of whom 50 have deceased. Of those now in the Institution, 64, or four-sevenths, are totally blind, and 48, or three-sevenths, *purblind*. These proportions will probably hold in regard to the whole number enrolled in the Institution. Of the *purblind*, about one-half are able to find their way about the streets without a guide, but unable to read by sight; the other half, though able to distinguish light, are very little benefitted by their sight.

"I submit the following replies to the inquiries contained in your circular:

1. "Very few persons are brought to the Institution so long as there is any reasonable hope of their restoration to sight, so that with the exception of a small number of young persons, say two or three per cent. of the whole number, all who enter may be regarded as incurably blind, or *purblind*, without the probability of material improvement. Of the whole number admitted, some ten have been discharged as cured.

2. "The great majority of the pupils can be trained to do something considerable for their own support.

3. "The statistics of our graduates warrant the opinion that three-fourths of the males, and about *one-third* of the females may be expected to sustain themselves, if not prevented by infirmity other than blindness.

4. "There is no Institution in this country where the blind do anything like labor enough to pay their expenses while pupils; to expect them to do it would be like expecting seeing children to pay for their board, clothing and tuition while attending school between the age of six and fifteen years. The labor of blind apprentices while learning their trade, may pay for the cost of materials, but cannot be expected to pay the rent of shop-room and tools, and the cost of oversight and instruction.

5. "How the number of *curable* cases of blindness may vary from year to year, I have no means of determining. The probabilities of a cure in curable cases depend almost entirely upon the question whether the subjects are first submitted for treatment to intelligent and skillful oculists, or to quacks and pretenders."

The Pennsylvania Institution is not self-supporting. Dr. G. Volney Dorsey, of Miami county, says:

"Schools for idiots are yet in their infancy, but from what has been done, we have surely reason to calculate on great results. I desire, however, more particularly to speak of the blind, my attention having been in no small degree directed to this class of patients for more than 20 years. Of cases of congenital blindness, consisting, as they generally do, of cataract of both eyes, almost every case is curable; and a well-performed operation seldom fails to afford a useful amount of vision. In those cases resulting from accident or transferred disease, a smaller proportion is curable, yet this number is, with the improvement in ophthalmic surgery, increasing every year. In regard to the number of the blind among our population, especially the native population, our statistics, as well as the opinion of medical men, would seem to favor the supposition that the proportion is decidedly diminishing, while the proportion of the insane, and, perhaps, also of the idiotic, is as undoubtedly on the increase.

"With regard to the possibility of rendering institutions for the care and education of these classes, or any one of them, self-sustaining, I can say nothing. I am not acquainted with any institution that is so; and the long course of training required to fit the subjects of any of these misfortunes, for any useful or profitable employment, will probably always ren-

der such institutions dependent on the munificence of the State or the charity of individuals for no small part of their support."

The conclusion to be drawn from all the facts and opinions presented, is, that nearly the whole body of the defectively infirm must remain in the dependent class; and that the best solution of their case is found in some form of public institutions, where they may be comfortably placed, humanely treated, kept from exposure and accident; while they receive the most skillful treatment which the advance of science and discovery has enabled physicians to attain.

Two points have been suggested to me, to which the increase and importance of this class may hereafter give significance. One is—that private institutions may possibly be established, under the care and regulation of law (not otherwise), which might furnish a refuge for those whose friends could support them. The other—that a commission of lunacy, or rather, as I would call it, of the infirm classes, be provided, which should thoroughly examine and report upon the condition of all public institutions for these objects; whose report would be independent and disinterested.

2. OF CRIMES—THEIR CAUSES AND PUNISHMENT.

In Table 19 will be found a summary of the indictments and convictions for crime in the common pleas and district courts. With the exception of a single county, they stand as follows:

Indictments.....	3,571
Convictions.....	1,234
Per cent of conviction, 35 per cent.	

It appears that a little more than one-third of those charged by a grand jury have been convicted.

In my last report, the estimate made upon a return of a part of the counties, made the indictments rather more, and the convictions much less. This discrepancy is owing partly to the actual variations of crime; but mostly to a class of cases called "liquor cases." In 1857, a large number of these indictments were pending, and scarcely any convictions under them. Thus the indictments were made to appear more numerous than usual, and the convictions less. This year the ratio represents about the true result. The number of *convictions* in proportion to the population is 1 in 1,950. The ratio of *indictments* is 1 in 677.

The classification of crimes indicted, were as follows, viz :

Crimes against persons	973
Crimes against property	1,038
Other offences	1,599

I give below a table of comparative crime between Ohio, Massachusetts and New York—the two latter being taken for 1856 :

	No. of Indictments.	No. of Convictions.	Ratio of Convictions.
Massachusetts.....	4,248	1,295	1 in 841.
New York.....	1,842	1 in 1,900.
Ohio	3,571	1,234	1 in 1,950.

The result shows that this State compares very well in regard to crime, with the oldest and best regulated States of the Union. There are some facts apparent in the face of judicial returns, which prove, however, that the machinery of justice is yet defective. In the counties of Hamilton and Cuyahoga, there were *twenty-seven cases of homicide*, as appears from the Coroners' reports. Of these, there were *four* convicted of murder in the first degree; *four* of murder in the second degree, and *five* of manslaughter. It thus appears that of twenty-seven homicides, *fourteen* were either not tried at all, or, acquitted of any guilt.

But the offenses indicted are really but a small part of the whole. The largest number of offenses are those which come before the Police Judges, Mayors of cities and Magistrates. Of these, at least four-fifths are in the large towns, and the great bulk in Cincinnati and Cleveland. The Mayors of these cities have furnished me with the statistics of offenses, which are as follows:

Police offenses in Cincinnati.....	6,156
“ “ “ Cleveland.....	1,775
Aggregate of these cities.....	7,931

Of these, 2,631 were offenses against the State. Of these, however, but 362 were indicted, which being deducted, leaves 2,269 to be added to the general aggregate of indictable offenses. The following presents the aggregate of crime:

Indictments, as above.....	3,571.
Indictable offenses before police courts.....	2,269.
Police offenses (as above)	5,662
Proportion for small cities.....	500
Aggregate crimes in 1858,	12,002

Having returns from all the Clerks in the State, but one, and from the Mayors of the principal cities, the above aggregate is reliable. In round numbers, it presents 12,000 crimes, in a population of 2,400,000; that is, 1 in 200. Deducting the police offenses, and taking those (including 2,269 for indictable offenses and punished by police court) of all kinds *indictable* and arrested, there are 5,840 indictable offenses; and this I regard as the true ratio. This is 1 in 415.

The following is the ratio of commitments for crime in Great Britain, as compared with ours:

In Scotland	1 in 738
" England.....	1 in 573
" Ireland.....	1 in 170
" Ohio.....	1 in 415

It is difficult to ascertain an exact ratio for crime in different countries; but perhaps the one I have assumed is as near a criterion as we can obtain. The proportion of *convictions* in the city of London, is the same as *commitments* in Ohio. We may assume, then, that in London, the proportion of offenses are more than double that of the State of Ohio; but, on the other hand, the proportion of offenses in Cincinnati is as large as that in London. It is generally supposed that crimes—especially those of violence—are numerous in France; but, from 1826 to 1831, (see Quetelet,) the convictions for murder in France, averaged 250 per annum; while Ohio presents, in 1858, some 65 homicides; of which, at least 25 may be placed under the head of positive malicious murder. The population of Ohio is only one-fourteenth that of France; so that we have a proportion of murders fully equal to that of France.

2. OF COMMITMENTS TO PRISON.—In order to ascertain the number of prisoners in jail, the term of confinement, and employment of time, I addressed a circular to the sheriffs of counties, from 61 of which I have received answers. These are contained in table 20. These counties give the number of persons confined during the year, 4,569. Taking his proportion for the whole State (making due allowance for the large counties,) we have these results, viz:

Number of persons confined in jail during the year, 7,000; average term of confinement, 20 days; average number confined at one time, 388; average cost per week, \$2 75; labor for support, none except in the county of Hamilton, where a chain-gang is kept for out door work.

In this connection, I may say that of 4,569 persons committed in 61 counties, 242 were taken from confinement by the writ of *habeas corpus*.

3. OF MURDERS, SUICIDES AND CASUALTIES.—In order to determine the number of those crimes and accidents which seem to impress the community with so much horror, I addressed circulars to the coroners. They returned, not merely the number of inquests held by themselves, but those held by magistrates in their several counties, although but 49 counties are returned yet. These contain the great counties of Hamilton and Cuyahoga, and as those wanting are but few, we have a pretty good view of this class of disasters. The counties returned give this result:

Murders	46
Suicides	47
Casualties	217

These proportions (deducting Hamilton and Cuyahoga,) carried out for the whole State, will give the whole number of these cases to be as follows:

Murders	65
Suicides	70
Casualties	310
Aggregate deaths by violence.....	445

By the term "murder" I mean all *homicides*, for the *degree* of guilt cannot be determined by statistics, and many of these cases have escaped trial altogether.

The suicides are numerous, and bear a rather larger proportion to the rural population than do the cases of murder. Suicide arises from different causes than do the crimes of violence.

Casualties are also numerous, and in this State may be accounted for in part by its extensive water boundary. About half the casualties are caused by *drowning*, and mostly in the Ohio river. This is also one of the modes of suicide.

4. CAUSES OF CRIME.—There can be no doubt that the great increase in crimes of violence is mainly due to intemperance. In another place I have shown that the State of Ohio contained in 1858, near 8,000 places where liquor is sold by *retail*—nearly all of them places of regular drinking. The majority of them are in Cincinnati, Cleveland, Toledo and other large towns. In those places the records of the Police Courts, Mayors' offices and magistrates, show, in most cases, the origin and cause

of the offense. The Mayor of Cincinnati informs me that nearly *four-fifths* of the 6,000 cases of offense brought before the Police Courts, were caused by intemperance. Of the 1,776 cases in the police courts of Cleveland, more than 500 were *directly* connected with intoxication, while of 280 cases of assault and battery, and 271 of disturbance, there is no question nearly the whole number were caused by the stimulation of drink. As insanity increases with civilization; so do the causes of crime, for the most powerful of these causes are unnatural stimulation in that class of the community whose intelligence is the least, and whose moral restraints are small.

5. OF PAUPERISM.

The reports (table 22,) this year present a statement of all the poor in 72 counties, which, with the full and accurate returns of Cincinnati and Cleveland enable us to ascertain very satisfactorily the condition of the poor in this State. Allowing the same ratio for the remaining counties, that is ascertained for the counties without large towns, and the result is 15,148 paupers for the whole State. These are not all, nor indeed half in infirmaries and poor houses, on any one day. But, those who are discharged are replaced by others, and most of the old ones are only discharged to return soon again, so that in fact the above number represents the permanent pauper population. By far the largest part of the whole (*three-fifths*,) are in the large cities of Cincinnati and Cleveland. The numbers in the counties containing cities and large towns, stand thus:

Cuyahoga	1,846
Hamilton.....	8,877
Lucas.....	163
Montgomery.....	652

A portion of these are maintained in infirmaries and asylums, but a much larger number receive out-door relief. This relief occurs mostly in the winter season, and especially among the aged and infirm, as well as widows and orphans. It should not be supposed, however, that these families are not among the pauper poor, for the same families (who survive) generally receive relief in each successive year. The number also increases with each year, and unless some of the elementary conditions of society

are changed, or some new remedial measure adopted, it may be predicted with absolute certainty, that ten years of growth will bring even a greater relative increase of pauperism than of population.

The *cost* of this evil is great, but much less to be dreaded than the moral danger of a large and increasing population, without the means of support, and with very little interest in the welfare of society. The absolute cost to the State is about \$280,000 per annum (see table,) but if we include the interest on the cost of infirmaries, and the annual support of charitable institutions, the cost of pauperism in this State is not less than \$350,000 per annum. While this is the case, however, there is far less of real pauperism in Ohio than in the Atlantic States.

Taking the same *ratio* (that is *all* receiving in-door and out door relief during the year,) I find the following results of the States of Massachusetts and New York, as returned by official authority for the year 1856:

	Population.	Paupers of all descriptions.	Ratio.
Massachusetts, in 1855.....	1,132,369	25,248	1 in 45
New York, in 1855.....	3,466,212	179,040	1 in 20
Ohio, in 1858.....	2,420,000	15,148	1 in 160

In New York, the annual cost of pauperism, including the public money paid to benevolent institutions has risen to the enormous amount of *two millions per annum!*

6. CAUSES OF PAUPERISM.—The causes of pauperism are chiefly four-fold:

1. Natural imbecility, or infirmity. In all the infirmaries and jails there are more or less of the insane, idiotic or half-witted. For this class there is no remedy, except such public institutions as are already provided or may be hereafter instituted for that purpose.

2. UNAVOIDABLE MISFORTUNES.—A few are made dependent in this way, but they are very few. Any one who is not quite old, and has common capacity may in this country acquire a daily support, if he exert himself. The avenues of employment are numerous, and in case of failure there are always some hands ready to assist. The worthy poor, who having natural talents, made such by misfortune, are very few.

3. A cause of some pauperism, no doubt, is the entire *want of early education*. This is not commonly noticed; but, there are some cases in which there has been a total want of the common discipline of faculties and prudence, and the result is a species of imbecility. As expressed to

me by one of the Auditors, they seem to have had no capacity to provide a competency.

4. By far the greatest and principal cause of pauperism is *intemperance*. This is the great evil of the times, and meets us everywhere. Of the 25,000 paupers in Massachusetts, 12,168 were made so by intemperance, either in themselves or others. The officers of Justice, the Mayor of cities, and all who have an opportunity of observing the dependent classes, testify to the same state of fact in Ohio. In many of the infirmaries, a large number are specified as intemperate, but the number enumerated does not show those, who are *made* paupers by this cause. The intemperance of the *head* of the family very often draws with it the pauperism of the whole family. The Mayor of Cincinnati says that *four-fifths* of the offences there are caused by intemperance. The loss of money and time involved in the punishment of these offences necessarily falls upon their families. The Mayor of Cleveland reports no less than 613 drinking houses in that city, and at the same time there are 1,311 persons receiving out-door relief, and 535 admitted during a year into the infirmary. The main causes of pauperism then may be summed up as intemperance, natural imbecility or infirmity, and want of early education.

7. AGGREGATE OF THE DEPENDENT CLASSES.—It may be interesting to look at the whole number of the infirm and dependent classes in Ohio, whether become such by nature, crime, vice, or poverty. This class is in every State and every country a problem for the statesman, philosopher, or philanthropist. In the declining state of the ancient nations its weight was so heavy and its burdens so great as to undermine the foundation of society, which in the first place had made the conditions out of which this class arose. Once, at least, in France it caused a revolution;* and we can not contemplate 180,000 persons receiving public charity in New York, one of the most prosperous of American States, without perceiving the approach of one of those dangerous elements which have proved so disastrous in other nations.

The defective, infirm, criminal and dependent class in Ohio, *all* of whom are *liable*, at any moment, to be made dependent on the public, all of whom

* Viscompt de Bargesmont on Pauperism in France; referring to the immense extent of pauperism when the elder Bourbons were dethroned.

are, in the course of a year, in some form, dependent, except a few of the defective, who are supported by their friends, are these:

Lunatics.....	1,936
Idiotic.....	2,016
Deaf and dumb.....	1,176
Blind.....	831
Average number permanently in prison, exclusive of penitentiary.....	383
Number in asylums, houses of refuge, widows' homes, &c., not supported by State	1,000
Number of paupers, permanent or temporary..	15,148
Number of offenders arrested and tried in one year	12,002
Aggregate	34,497

If it be objected that the persons arrested or tried ought not to be included above, the answer is direct and decisive. *Every one* of them actually has cost the public something in the year past; and the same number at least *will* cost in the year to come. It is entirely safe to say that more than 34,000 persons will in the year 1859 cost the public the whole, or part of their support, or at least the cost of their trial. They all belong to the dependent, or the dangerous class of society. The best aspect their condition presents is, that these classes are in Ohio not only far less than in Europe, but less proportionably than in several of the older States of the Union. There are great differences in this class, produced by the elementary condition of society. The States most agricultural and least commercial are those which have the fewest of these classes. Such are Vermont and New Hampshire in the north, and Virginia in the south. To these we must superadd education and temperance, as preventatives, and we have the cause of diminution on one hand and in their opposites, the cause of increase on the other. In proportion to our population, we have not over one-fourth this class which are found in New York, nor more than one-half found in Massachusetts.

In the conclusion of this topic, I may add that the statistics of the last half century prove that, taking Europe and America together, the number of the dependent and dangerous classes is *relatively* diminishing. The condition of society is, on the whole improved, and with this improvement has diminished, in some degree, poverty, disease, mortality and crime.

TABLE 1.—METEOROLOGY OF MARIETTA.

Abstract of a Meteorological journal kept at Marietta, Ohio, beginning November 1, 1857, and ending November 1, 1858, by S. P. Hildreth.

MONTHS.	Maximum tem- perature.	Minimum tem- perature.	Mean tem- pera- ture.	Rain in inches and 100.		WINDS.

October.....	85	38	56.66	7	66	E. N. and S. W.
Mean for the year.....			53.93	57	29	

REMARKS ON THE WEATHER.—The past year has been remarkable for the great amount of rain, and for being in excess during some months that are often rather dry; the whole being over 57 inches, almost five feet. The average for a series of years is 42 inches, or $3\frac{1}{2}$ feet. So large a quantity of rain was injurious to many crops, especially to oats, potatoes and wheat. The early setting in of wintry cold in November, 1857, froze and destroyed a large amount of the potato crop, both dug and undug. The mean temperature is also a degree and a half above the average for this locality, which is 52.25. December and January were both mild and temperate.

TABLE 4.

General Condition of Agriculture and Crops in Ohio, for the year 1858, as compared with 1857, and average years, as reported by competent observers, with remarks on the causes of difference.

COUNTIES.	WHEAT.	CORN.	OATS.	FRUIT.	REMARKS.
Adams..... J. Loughry.	Little over half of last year; quality middling.			A superior crop of peaches; apples small and inferior.	There were good peaches, and plenty, for about 40 miles on the Ohio River, including Rockville and Manchester. Fruit injured by frost in April, and rains in June.
Allen..... R. Metheany.	Equal in quality and double in quantity to that of 1857.	Much better in quality, but not more than half in quantity to that of 1857.	Not exceeding one-tenth, and indifferent in quality.	Almost a total failure.	Fruit was injured by cold rains and frosts in May.
Ashtabula..... J. Swineford.	About half an average crop.	A middling crop.	About one-third.	Little fruit; not more than one-fourth the usual amount.	Fruit killed by the frost of the 26th of April.
Ashtabula W. O. Howell.	Better than usual.	Less planted, but good in quality.	One-third crop.	Peaches, apples, cherries, and plums a failure.	Grass is the principal crop of this county, which was abundant. Potatoes good and abundant. Fruit killed by continued rains and north-east winds.
Athens A. B. Walker. N. P. Hoisington.	One-third an average.	From a half to a third in quantity; in quality better than last year.	A total failure.	Nearly an utter failure.	Grass was in this county abundant. Potatoes one-fourth a crop. Fruit killed by the frost of 26th of April, and cold rains.
Auglaize					
Belmont J. Nieswanger.	Yield less in quantity but better in quality.	Less in quantity, but better in quality.	Half a crop; deficient in quality.	Almost an entire failure.	Fruit killed by the frost of the 26th of April. Oats struck with the rust in the wet season.
Brown					
Butler..... J. M. Milliken.	Five-eighths the crop of previous year.	Not over half.	One-tenth.	About one-tenth a crop of fruit.	Failure of fruit owing to the frost of 26th April.
Carroll..... W. Butler.	One fourth a crop.	Pretty good. Not quite so much per acre.	Nearly an entire failure.	No fruit worth naming.	Reason generally given for fruit failure is spring frosts.

TABLE 4—Continued.

COUNTIES	WHEAT.	CORN.	OATS.	FRUIT.	REMARKS.
Champaign A. F. Vance.	A little over half the usual crop. Berry better than last year.	More good corn than last year but still not more than half a crop.	A failure—all stricken by the rust.	A general failure.	Frosts and the measuring worm injured the fruit.
Clark J. Newlove.	One half.	One-half.	One-fourth.	Nearly all killed.	Fruit partly killed by the frost, and partly by the heavy rains of May.
Clermont J. McMurchy.	Much less than in 1857.	Corn less in quantity; better in quality.	Inferior,	Not over one eighth of a crop.	Fruit killed chiefly by the frost in April.
Clinton A. E. Strickle.	Not representing 60 per cent. of 1857. Cause supposed to be the immense am't of rain fallen in spring.	Corn 80 per cent. in quantity but much better in quality, so as to be about equal in value.	Almost an entire failure; having been destroyed by the rust.	Almost an entire failure. Previous cold winters and April frosts supposed to be the causes.	Grass better than usual.
Columbiana ... E. M. Colestock J. Heaton.	Two fifths injured by rust and weevil.	Better than in 1857. Sound and good.	Almost an entire failure. Injured by rust—heretofore unknown.	An entire failure of cherries, pears, peaches and plums. Almost a failure of apples.	Fruit killed by frost in April and subsequent period.
Coshocton					
Crawford					
Cuyahoga J. P. Kirtland.		Two-thirds.	Almost a total failure.	No peaches or plums; a few inferior apples; half a crop of pears and a fourth of cherries.	The severe and cold rains seemed to waste away the pollen or impair impregnation, in the blossoms. The same cause interfered with the formation of honey.
Darke Noah Arnold.	Less in quantity but better in quality.	Half a crop; better in quality.	An entire failure.	About one fourth a crop.	Fruit killed by wet weather.
Defiance					
Delaware					
Erie F. D. Parish.	An average crop.	Two-thirds a common crop, and a sound article.			
Fairfield J. O. Weaver.	One half of 1857.	Less in quantity; better in quality.		Fruit a failure except some of improved kind.	Grass better than in 1857.

TABLE 4—Continued.

COUNTIES.	WHEAT.	CORN.	OATS.	FRUIT.	REMARKS.
Fayette Gilbert Terrell.	33 per cent less than in 1857. Light	25 per cent less, but sound and good quality, half a crop, better quality.	Comparatively more; destroyed by the rust.	A total failure with a small exception.	Fruit chiefly killed by April frost.
Franklin..... S. F. Kerr.	Half a crop; better quality.	Half a crop; better quality.	An entire failure.	Very little fruit matured.	Fruit not killed by the frost.
Fulton..... L. H. Upham.	A half better than last year.	Two-thirds of a crop.	One-third of a crop.	A third of a crop of apples.	Grass an average. Potatoes half a crop.
Gallia					
Geauga					
Greene..... E. F. Drake.	Half a crop in quantity. Fair quality.	More in quantity than last. Not equal to former years. Very good in quality.	Almost an entire failure. Straw rusted—an uncommon occurrence.	Small fruits an average. All other fruits an entire failure.	Fruit was destroyed by the frost of the 26th of April.
Hamilton..... R. Buchanan.	Less than last year.	Three-fourths of a crop.	Half a crop, owing to rust—a rare thing.	Small fruits an average. Apples 1-5, Peaches $\frac{1}{4}$.	Hay one-third more than last year. Blackberries were an enormous crop, of which 12,000 bushels were brought into Cincinnati market.
Hancock..... A. Hall. H. Brown.	Much better than in 1857.	Not so heavy but of superior quality.	A failure.	Little fruit in this county, and nearly destroyed.	Fruit principally killed by frost in November, 1857, and in March, 1858.
Hardin..... Thomas Rough	Decidedly better in quality; say one-fourth better.	One-third of last year in quantity; but better in quality.	Nearly an entire failure; partly from rust.	Fruit a small crop.	Fruit not killed by the frost, but mainly by the depredations of a worm which injured the tree as well as the fruit.
Harrison					
Henry..... J. Kelley.	Hardly as large a crop as in 1857.	More in value than last year.	A failure.	Nearly nothing; say 1 6.	Potatoes not one-fourth as many as last year.
Highland..... J. M. Trimble.	One-third less in quantity. Quality not so good.	One-third less in quantity but had more good corn than in 1857.	A total failure from rust.	Fruit may be called a failure.	The general belief is that fruit was killed by the frost.
Hocking					

TABLE 4—Continued.

COUNTIES.	WHEAT.	CORN.	OATS.	FRUIT.	REMARKS.
Holmes	Less than last year.	Corn good. Better than last year.	Almost an entire failure.	No fruit except apples, and few of them.	Think fruit was killed by the frost.
Rus'll Wheaton					
Huron					
Jackson					
Jefferson	Wheat eaten by the midge.	Corn short, but better in quality.	Much injured by rust; a new thing.	Apples and peaches none; cherries and plums few.	Small fruits abundant. Large fruit mainly killed by frost of 26th of April.
J. D. Ladd.					
Knox					
Lake	About three-fourths of last year's crop. Injured by weevil.	Something better than last year.	One-fourth of a crop; say 10 bushels to an acre.	No fruit. Not killed by frost, but blossoms and foliage withered and fell off.	Potatoes, 3,000 acres planted; product, 50 bushels to an acre; 150,000 bushels. Less than last year.
J. Coolidge					
A. Childs.					
Lawrence	Two-thirds of a crop.	Corn better. Quality very superior.	Nearly a failure.	Nearly a failure. Apples, few perfect. Peaches hit well on high ground.	Small fruits a full crop. Large fruits partly killed by the frosts and partly by cold blighting winds.
N. Gillett.					
R. Stimson.					
Licking	Small crop. Not more than 10 bushels per acre.	One-half an average in quantity, but better in quality.	One-fourth a crop.	Very little fruit. Not more than one-fourth of last year's.	The cold of April was the principal cause, but the canker worm has damaged the apple crop for two or three years.
W. S. Wright.					
Logan	Good. Fair average.	Better than last year. Two-thirds an average good crop.	One third of a crop; destroyed by rust; a thing unknown.	No peaches and few apples, and those all injured by worms.	Think the extreme wet season killed the fruit. The pollen of the blossom was destroyed, and did not fructify.
W. Lawrence..					
Lorain	About the same as last year.	About the same, but better in quality.	Almost an entire failure; blighted by the rust.	Small crop of fruit.	Fruit was not killed by frost, but blighted by cold north east winds. The hay and grass crop was good.
N. B. Gates.					
E. Matcham.					
Lucas					
Madison					
Mahoning	About the same as last year, but rather lighter.	Corn rather less in quantity; better in quality.	About one-third; nearly destroyed by rust.	Very little fruit. Almost an entire failure.	Destruction of fruit not attributed to the frost; to cold damp weather and easterly winds.
R. W. Taylor.					
David Haynes.

SPECIAL MESSAGE FROM THE GOVERNOR.

STATE OF OHIO, EXECUTIVE DEPARTMENT, }
COLUMBUS, March 8, 1859. }

To the General Assembly:

I herewith transmit a letter addressed to me by Alfred P. Edgerton, Charles Reemelin and William D. Morgan, appointed by the General Assembly Commissioners to examine into the condition of the Treasury of the State, the causes of the defalcation therein, and other matters particularly mentioned in the act of April 12, 1858. I also transmit with this letter, the report of the Commissioners relating to the several matters with which they were charged.

By the act creating the Commission, the Governor is required to cause the report of the Commissioners, when received, to be printed forthwith. This requirement probably contemplated the making of the report during your late recess. As circumstances, however, have prevented its completion until you are again in session, I shall doubtless best fulfil your wishes by compliance without delay, with the request of the Commissioners to transmit it, together with their letter, to you.

Concurring fully in the general wish that the defalcation in the Treasury should be probed to the bottom, and desiring earnestly the most thorough investigation of all other matters connected with the recent or existing administrations of the State Government, in respect to which the General Assembly or the people might wish information, I thought it my duty, upon the passage of the act, rather to promote inquiry in the mode adopted by you than to embarrass its activity by urging objections, whether well or ill-founded, to that mode.

I complied therefore, promptly, with the joint resolution requesting me to notify Messrs. Edgerton, Morgan and Reemelin of their several appointments.

It was well known, however, to many members of both Houses while the law of the last session was pending, that I regarded the proposed action

of the General Assembly in appointing, itself, the members of the Commission, as unwarranted by the Constitution. The Commissioners were, however, so appointed, and it seems proper now, the contemplated investigation having been completed, to guard, by an express statement, against the possible inference of acquiescence in the constitutionality of that action from the performance by me of the duties assigned by the act to the Executive.

The power of appointment is, in its nature, an executive, not a legislative power. The Constitution of the State expressly declares that "no appointing power shall be exercised by the General Assembly except as prescribed in this Constitution, and in the election of United States Senators." The appointment of the members of such a commission is certainly not prescribed in the Constitution, nor are the members United States Senators. I do not see, therefore, how the inference can be avoided that in the appointment of these Commissioners the General Assembly exercised an appointing power in contravention of the Constitution.

The act constituted a board; provided that it should consist of three members; authorized them to elect one of their number president; required them to take an oath of office; prescribed their duties; fixed their compensation; clothed them with the powers of a court of record in issuing process and in punishing contempt; and prescribed no limit other than the completion of their work to their term of office. All this the General Assembly might, doubtless, constitutionally do. Doubtless, also, in so doing, they created offices and provided for officers to fill them. Here the legislative power under the Constitution, in my judgment, terminated. They could not constitutionally appoint the Commissioners. In doing so, they transcended, as I can not but think, the just limits of their constitutional power.

The power of the General Assembly, through committees of their own body, to investigate transactions connected with the public interests, is not questioned. Members of the General Assembly are elected to discharge such duties among others. It is obvious, however, that a power to investigate through such committees is not a power to constitute a commission of citizens not members, and appoint the Commissioners. The former power may be implied from the nature of legislative authority, the latter seems to be expressly denied by the Constitution.

I trust I need not say that in expressing this opinion, I by no means

impute to the General Assembly any designed infraction of the Constitution. The promptness with which I have complied with the resolution and the statute imposing duties on the Executive in relation to this matter, sufficiently evinces my respect for its action, and my desire, so far as possible, to fulfil its wishes.

Regarding, however, the will of the people, expressed in the Constitution, as imperative upon all the departments of the government, and the exercise of doubtful powers as dangerous to liberty, I could not feel that I had quite discharged my duty, when performing the last official act required by the statute, without placing on record this frank expression of an opinion in which I am unfortunate enough to differ from the General Assembly.

But one copy of the letter and the report of the Commissioners having been furnished to me, it is sent to the Senate.

S. P. CHASE.

ANNUAL REPORT

OF THE

COMMISSIONERS OF THE SINKING FUND,

TO THE

GENERAL ASSEMBLY OF OHIO:

FOR THE YEAR 1858.

STATE OF OHIO, EXECUTIVE DEPARTMENT, }
Columbus, March 19, 1859. }

To the General Assembly of the State of Ohio:

I herewith transmit in manuscript the Report of the Commissioners of the Sinking Fund, together with a schedule of certificates of stock burned under your joint resolution passed April 12, 1858.

But one copy having been prepared, it is sent to the Senate.

S. P. CHASE.

ANNUAL REPORT

OF THE

COMMISSIONERS OF THE SINKING FUND.

OFFICE OF THE COMMISSIONERS OF THE SINKING FUND, }
COLUMBUS, OHIO, Feb. 15, 1859. }

To His Excellency SALMON P. CHASE, Governor of the State of Ohio:

The Commissioners of the Sinking Fund herewith submit the following report of their operations during the past year:

RECEIPTS.

The nominal balance of Sinking Fund in the State

Treasury Nov. 15, 1857, was.....	\$352,714 14	
The deficit was	337,324 03	
Leaving a cash balance Nov. 15, 1857, of.....		\$15,390 11

Total disbursements from Nov. 15, 1857, to Nov. 15, 1858...	<u>\$1,097,057 44</u>
Total receipts	\$1,164,368 41
Total disbursements.....	1,097,057 44
Balance in Treasury Nov. 15, 1858.....	<u>\$67,310 97</u>

TEMPORARY LOAN.

Pursuant to the provisions of an “ Act authorizing a temporary loan of \$700,000,” passed April 12th, 1858, the Commissioners, having made diligent inquiry, and being satisfied that the money could not be obtained in Ohio, upon terms that would be satisfactory to them, or advantageous to the State, on the 8th day of May last advertised in the principal New York papers for a temporary loan of \$500,000—\$250,000 of which was to be reimbursable on the 1st day of July, 1860, and \$250,000 on the 1st day of March, 1861.

On the 25th of May they opened the proposals which had been received, and found them to be as follows:

Edward R. Boyle proposed to take the entire amount of the loan at a premium of “ *one half of one per cent.*”

The Merchant's Insurance Company of Hartford, Ct., proposed to take \$10,000 reimbursable July 1st, 1860, *at par*.

Thompson Brothers, of New York, proposed to take \$250,000, reimbursable July 1st, 1860, at a premium of 30 cents on each \$100—and \$250,000 reimbursable March 1st, 1861, at a premium of 51 cents on each \$100.

The Norwich Savings Society of Norwich, Ct., proposed to take \$50,000 of the year 1860, at a premium of 10 cents on each \$100; \$50,000 of the year 1860, at a premium of 76 cents on each \$100; \$50,000 of the year 1861, at a premium of \$1 on each \$100; and \$50,000 at a premium of \$1 25 on each \$100.

P. Harmony's Nephews & Co., proposed to take \$50,000 reimbursable March 1st, 1861, *at par*.

After thoroughly examining and considering these bids, the Commissioners awarded the loan as follows:

To the Norwich Savings Society—

\$50,000 reimbursable March 1st, 1861, at a premium of one dollar on each \$100; and \$50,000 at a premium of \$1 25 on each \$100; \$50,000 reimbursable July 1st, 1860, at a premium of ten cents on each \$100; and \$50,000 at a premium of 76 cents on each \$100.

The bid of this Society was not divisible.

To Thompson Brothers—

\$150,000 reimbursable March 1st, 1861, at a premium of 51 cents on each \$100.

To Edward R. Boyle—

\$150,000 reimbursable July 1, 1860, at a premium of 50 cents on each \$100.

As soon as the awards were made, the several parties were notified of the action of the Commissioners, and were called upon to comply with the conditions set forth in the advertisement for the loan, which required a cash payment of five per cent. upon the amount awarded.

Edward R. Boyle having failed to comply with this requirement, the Commissioners were compelled to give the amount which had been awarded to him to the next highest bidder, as follows: to Thompson Brothers, \$150,000, at a premium of 30 cents on each one hundred dollars.

Subsequently, while the Commissioners were in the city of New York, superintending the payment of the semi-annual interest on the Foreign debt

due July 1st, 1858, it was represented by the Auditor and Treasurer of State that an additional loan would be required in order to provide means for the payment of appropriations for the current year. Accordingly the Commissioners negotiated with Thompson Brothers for a loan of one hundred thousand dollars, at a premium of six tenths of one per cent., for which they issued transferable certificates of six per cent. stock reimbursable, March 1st, 1861. Upon their return to Columbus they also contracted with the Bank of Commerce, of Cleveland, for the further sum of one hundred thousand dollars, at a premium of one per cent. for which they issued transferrable certificates of six per cent. stock reimbursable, July 1st, 1860. The proceeds of this loan were paid into the State Treasury by the Bank of Commerce.

This made up the full amount authorized by the law. The interest and principal of the entire amount were made payable in the city of New York.

The following is a recapitulation of the Temporary loan :

	Principal.	Premium.
Awarded to Norwich Savings Society, six per cent. Stock due July 1st, 1860.....	\$100,000	-----
Awarded to Norwich Savings Society, six per cent. Stock, due March 1st, 1861.....	100,000	\$1,511 70
To Thompson Brothers, New York, six per cent. Stock, due July 1st, 1860	150,000	-----
To Thompson Brothers, New York, six per cent. Stock, due March 1st, 1861.....	250,000	2,145 84
To H. B. Hurlbut Cas. Bank of Commerce, Cleveland, six per cent. Stock, due July 1st, 1860	100,000	1,000 00
Total	\$700,000	\$4,657 54

Of the above amount, the Commissioners paid into the State Treasury, to the credit of Sinking Fund \$298,679 85
 And to the credit of General Revenue 405,977 69
 Making a total of \$704,657 54
 which was the entire amount of the proceeds of the loan.

The act "To define the powers and prescribe the duties of the Board of Commissioners of the Sinking Fund," passed April 12th, 1858, was designed to effect some radical changes in the method of transacting the

business appertaining to the Public Funded Debt of the State, the most important of which was the change of the office for the transfer of certificates of stock from the city of New York, to the seat of government at Columbus. The Commissioners have endeavored faithfully to carry into effect the provisions of this act.

Upon the recommendation of a majority of the Commissioners, the Governor appointed James A. Briggs, Esq., to be the agent of the State in the city of New York; Mr. Briggs gave bond, as required by the 18th section of the act above referred to, in the sum of thirty thousand dollars. The sureties on the bond are all citizens of this State, and "of undoubted ability to pay the same."

Immediately prior to the 1st day of July, 1858, the Commissioners caused a sufficient amount of money to be conveyed to the city of New York for the payment of the semi-annual interest due on that day; gave notice through the principal papers that they were present and ready at the agency to pay all such interest, and remained there paying all demands for interest until the expiration of fourteen days from the first day of July, when they returned to the seat of government, bringing all the remaining money with them, and paid the same into the State Treasury to the credit of the Sinking Fund on the certificate of the Comptroller of the Treasury.

The amount paid in New York was.....	\$380,495 00
The amount brought back and certified into the Treasury was.....	23,952 37
Total amount of July interest.....	<u>\$404,447 37</u>

At the same time they took possession of, and brought to the seat of government, all the books, records, papers, correspondence, certificates engraved or printed, and all money, property and effects of every description, that were in the office of the agency in the city of New York, or in the custody or under the control of any other institution in New York. The books, records, papers, &c., were deposited in the office of the Board, and the money, being a balance remaining July 1, 1858, of moneys transmitted to New York prior to January 1st, 1858, for payment of interest, but which balance had not been called for, amounting to \$21,320 15 was paid into the State Treasury on the certificate of the Comptroller of the Treasury, to the credit of the Sinking Fund.

Since the first of June last, all transfers of stock have been made in the office of the Board at the seat of government. Stock ledgers are kept

both in the office of the agency in the city of New York, and at the office of the Board in Columbus, wherein all proper entries are made, the requirements of the law in relation thereto having been fully complied with.

The Commissioners finding that there would not be a sufficient amount of money in the Treasury for the payment of the semi-annual interest due in New York January 1st, 1859, availed themselves of the provisions contained in the 10th section of the "act to provide for the semi-annual collection of taxes," and notified the Comptroller of the Treasury of such deficiency and the amount thereof. The Comptroller, upon the warrant of the Auditor of State, drew upon the several County Treasurers for sums amounting in the aggregate to \$469,500 00, which drafts were promptly responded to by the County Treasurers.

On the 27th day of December, the Commissioners issued their requisition directed to the Auditor of State, for his warrant upon the State Treasurer for the sum of four hundred twenty-four thousand, five hundred thirty and 70-100 dollars, (\$424,530 70) being the exact amount of interest due in New York January 1st, 1859. This sum the Commissioners caused to be conveyed to the city of New York, where they gave the required notice of their presence and readiness at the agency of the State to pay all such interest. The amount paid by them from the 1st to the 15th of January, was \$410,362 13, leaving a balance unpaid of \$14,168 57, which sum they brought back with them, and on the certificate of the Comptroller paid into the State Treasury to the credit of the Sinking Fund. Including the amount received from the Comptroller's drafts upon County Treasurers, the receipts into the Sinking Fund from November 15th, 1858, to January 1st, 1859, were as follows:—

RECEIPTS.

From sales of section 16, school lands.....	\$15,049 72

Salary of State Agent, office rent and other expenses, of New York office, clerk's salary and other ex- penses of Columbus office, traveling expenses, &c.....	1,962 89	
		<u>438,527 44</u>
Balance in Treasury, January 1, 1858.....	\$131,364 94	

By virtue of powers conferred by a “joint resolution relative to the sale of stocks and bonds owned by the State in railroad and canal companies, and the settlement of certain claims due the State,” passed April 12th, 1858, the Commissioners, on the 20th of December last, compounded and settled with John M. Armstrong, Esq., Receiver of the Canal Bank of Cleveland, a judgment recovered by the State against said Canal Bank, in February, 1855, amounting to \$6,902 48. A dividend of twenty per cent. on this amount had been previously paid by the State Treasurer from assets in his hands belonging to the Bank, and for the sum of \$2,169 18 in addition to this dividend, which was \$1,380 91, the Commissioners made a final settlement. The sum of \$2,169 18 thus received was certified into the State Treasury to the credit of the Sinking Fund, as provided in said resolution.

Under a “joint resolution relative to burning certain certificates of the public funded debt now in the Auditor's office,” passed April 12, 1858, the Commissioners report that they have burned the certificates of the funded debt referred to in the presence of Anson Smyth, State School Commissioner, and W. B. Thrall, Comptroller of the Treasury, and that a schedule of the certificates burned, will be found appended to this report. The condition of the funded debt of the State, on the first day of January, 1859, both foreign and domestic, and also of the irreducible debt, is set forth in the following statement:

FOREIGN DEBT.

The interest and principal of which is payable in the city of New York.

Six per cent. stock, loan of 1860.....	\$6,413,325 27
